WORLD OF INDIAN FINANCE

Friday, October 5.

The money market has left behind the phase of abundance of funds. It is yet difficult to size up the position to a nicety. Call money has been done at as high a rate as 1½ per cent., though the quotable rate for purposes of these columns, is much lower. That, despite the definite absence of abundance, there is still a degree of ease is indicated by the fact that at the last sterling auction the market tendered only £915,000. The Treasury Bills auction too, gives the same tale of a certain amount of surplus funds still lingering. As against the amount of Rs. 1½ crores on offer on last Tuesday, the market applied for as much as Rs. 253 lakhs. But it is significant that the weekly tenders have gone down remarkably from the level of Rs. 462 lakhs last week to as low as Rs. 253 lakhs.

While thus there can be no exaggeration of stringency, it is certain that the task of finding outlets for the surplus funds created in the middle of September has been wellnigh completed. In this movement of funds into investment channels, the stock exchange have, indeed, benefitted markedly during the last fortnight. The general upward movement of securities is unmistakable. While in particular markets and in the case of particular scrips, special factors have had their effects, the pressure of surplus money on stock and share prices has been perceptibly felt. It might also be added that, if, as one might suspect, there is a considerable stringency of monetary conditions, there can be no doubt that giltedge prices would have suffered to some extent. As it is, the general level of giltedge prices has been unaffected; and there is no reason to apprehend any serious changes before the beginning of the Pujah season. Already the coming languour of the holidays has cast its shadow before. There is very little doing and the eminently human trait of relaxing one's nerves in contemplation of the coming holiday season has asserted itself, as well among big businessmen as among the rank and file of ordinary workers in commercial houses. Thus considered from the psychological point of view as also from the objective conditions of the money market, one might expect the present position to continue till the end of the Pujah season.

As mentioned already, there has been no marked change during the week in Government securities. The market at the close of business to-day is practically the same as last Friday. The London market during the week has not offered to Indian Rupee securities the same strength as it had been doing in the previous weeks. 3½ per cent. sterling stock has been subject to some fluctuations. These fluctuations are attributed in certain quarters to the reports regarding the Canadian conversion operations. The yield basis of the conversion loan announced by the Canadian Government during the week confirms the general prognosis of experts that the downward trend of interest continues and must continue for some time. But to return to the giltedge market in London, the fluctuations in 3½ per cent. sterling resulting from rumours about the Canadian loan operations cannot detract from the fundamentally bullish undertone of giltedge securities. But for the present, there has been no significant movement in India giltedge either in Rupee securities in India or in the sterling securities in London.

The movement of funds into ordinary shares, of which mention was made earlier in this article, is deserving of special note. Our readers should find it easier to note and appraise the changes that are occurring through the special *Investors' Supplement* which we are bring out as from this week. A word or two of explanation of our purpose and aim might be appropriate in this context. It will be generally realised that the form of the share tables, which we had been publishing till last week, and the data afforded therein were inadequate for the purpose of the investors, who would accurately gauge the trends of prices and yields in the stocks and shares. We have, therefore, been considering for some time the expansion of the statistics presented in the share section; and this involved the accumulation of information that is not ordinarily available and calculations which have taken time to make. We have

thought it desirable to issue the share section and the other sections of *Indian Finance* separately, as we deem it likely that investors, who are not interested in the larger problems of Indian economy and finance, might appreciate our making the *Investors' Supplement* available to them in separate form. As our readers will see the aim that we have set before ourselves in the compilation of the *Investors' Supplement* is to render complete the information necessary for the investor to make up his mind. For all the important scrips of either giltedge or equities, we have endeavoured to show the yield obtainable from the scrips at the ruling prices. In the case of redeemable Government securities the tables show both the current and the redemption yields ; in the case of ordinary shares the calculations of the yields is necessarily a highly complicated affair. In the first place, the value behind the equities is always a more important factor than current incomes which they yield in the shape of dividends. And as is well-known, the value represented by an ordinary share cannot be estimated even by the closest scrutiny of the balance sheet. In this view, it is indeed not quite scientific to try to indicate the value of an ordinary share by its yield in the shape of dividends. And even if one were to be content with the yield calculated on the basis of the dividends, there are the complications introduced by the half-yearly dividend, interim dividend, delay in declaration of dividend and the like. It has, therefore, to be emphasised that the figures given in this section are to be regarded with the obviously necessary caution. With this proviso, we can fairly claim that the improvement effected in the share tables will be found to be of great help to those interested in the affairs of companies and in the movement of shares in the stock exchange.

A scrutiny of the figures show in this share section will show that there has been a significant rise in prices of ordinary securities and that such rise has ample warrant in the yields given by the better classes of scrips. If one were a little imaginative, he might be led on to predict other major developments in the business world, which the improvement in the share prices may normally be supposed to indicate. For the present, we shall be content with drawing attention to the improvement which is common to all the principal centres in India and which accounts adequately for the investment of the surplus funds.

The Statement of the Imperial Bank of India for the week ended September 28 is remarkable for the evidence it bears and the increasingly comfortable position of the Treasury's cash balance. Not only have the Government been able to repay the Ways and Means Advances of Rs. 2 crores, which they had availed of in the previous week, but they have also been able to increase Public Deposits with the Imperial Bank from Rs. 6,35.76 lakhs to Rs. 8,25.61 lakhs in the week ending September 28. That is, the Treasury has had an access of nearly Rs. 4 crores during the week. For such a favourable position, the Government have the revival of intermediate Treasury Bills to thank. The last communique of the Controller of the Currency shows that Rs. 1,72,25,000 of three months intermediates were sold from September 19 to 24 ; and it is also announced that intermediate Treasury Bills will be sold from September 26 to October 1 at the rate of Rs. 99-11 per cent. The Government have had a good taste of the benefits which the continuance of intermediate Treasury Bills will introduce in their cash position. It must be exceedingly pleasant for the Controller of the Currency to contemplate that, while he is going on merrily with the sales of Treasury Bills both by auctions and by the tap sales, there are no maturities to be paid off till towards the end of the month.

The exchange market is still dull and stagnant. The lag in gold exports continues ; but the general outlook may be said to have improved a shade. There are reports that cotton prospects are better ; and if these reports are true, there is reason to hope for strength in exchange. Besides, it must be borne in mind that, despite the tendency in certain quarters to exaggerate the amount of gold in India waiting for export, successive weeks of paltry exports must have resulted in a considerable accumlation. One estimate puts the amount of gold in Bombay at 12 to 14 lakhs tolas. This is assuredly a bull point. The market is still domiatned to some extent by expectations of a further devaluation in the dollar Our reading of the situation in America does not point to the possibility of Mr. Roosevelt resorting to a further cut in the dollar for sometime. Our overseas columns this week show that the New Deal, generally speaking, is in one of those critical phases, in which new measures can be undertaken by the Administration only with great circumspection. There are also rumours afloat in the London market that the British and American Governments are more disposed than ever towards the stabilisation of the London New-*pourparlers* between the authorities concerned towards York cross rate ; and that there had been actually some such an end. Though one might discount these rumours, they still have a significance in regard to the question of the devaluation of ex-dollar.

Whatever the prospects of the dollar might be, so far as the future course of the Rupee rate is concerned, it may be said that the same pressure of accumulation should manifest itself before long and the resultant demand for cover should be reflected in appreciable purchase of sterling by the Government. The indications, therefore, are that the Rupee rate will continue steady.

The closing rates are: 1s. 6 3/64d., October-November-December T.T. ; 1s. 6 1/32d., January-February T.T. ; 1s. 6 1/64d., March-April T.T. ; 1s. 6d., May-June T.T. and 1s. 5 31/32d., July-December T.T.

Three months Bills quoted 1s. 6 5/32d., October ; 1s. 6 1/8d., November to March and 1s. 6 3/3d., April-May.

Money remained easy during the week. Call money quoted 1½ per cent. Onemonth, twomonth and threemonth deposits quoted 1¼ per cent. all through. Sixmonth deposits quoted 1½ per cent. and twelvemonth deposits 1¾ per cent.

1677

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

Thursday Evening.

The downward trend of sterling which began last week has continued during the present week also except for a slight firming up on Friday of last week. The weakness has been very pronounced ; and it is reported that fresh offers of sterling were made from the Continent and these offerings led to the resumption of the downward trend of sterling. It is interesting to recall the sharp turns in the international exchanges during the past one or two months. At first it was a case of a decline in the dollar. Thereafter sterling weakened for a time. Then it was the weakness of both sterling and dollar in terms of gold currencies. Then after the recovery of sterling lasting about a week, it is now a case of the weakness of sterling in terms of both dollar and franc. During the week the sterling-dollar and the sterling-franc rate have both come down. Only at the end of last week there was a slight recovery which was due to Continental bear covering resulting from rumours that Belgium might have to abandon the gold standard. These rumours were based on the knowledge that the Belgian Cabinet was divided on the question of monetary policy. Readers of *Indian Finance* are aware that, just as in France where there is a movement set afoot for persuading the Government to adopt devaluation, in Belgium also a similar movement has been waxing strong of late. The Government, it was well-known, was in favour of continuing on the gold standard and making the necessary adjustment in prices and cost which would render it easier for the country to continue on gold. But on a question like this it is almost futile to expect any degree of unanimity amongst the Ministers ; and the knowledge that in Belgian Cabinet there was strong opposition to the policy of continuing on the gold standard induced a fresh crop of rumours that there would be a Cabinet crisis, as a result of which the devaluationists would assume power. It was on the strength of such rumours that the bear attack on sterling was, for the moment, reversed and a rise in the sterling-franc rate was noticeable. But Belgium has apparently lived down the crisis which, incidentally, benefitted the British currency. It is now believed that the Belgian politicians have made up their differences and that, therefore, the Belgian Government would not be called upon for political or other reasons to abandon the gold standard. With this improvement in the situation in Belgium, the pressure on sterling has increased.

It is significant that the London price of gold has reached a yet higher record level of £7-2-2½d. This is the fullest testimony to the disappearance of the scare about the Belga. At the same time the seasonal demand for dollars is much higher than usual. Owing to the improvement in the United States trade, there is a larger demand for dollars. It would appear that in America the Government are feeling less and less inclined to embark on new monetary experiments, for, the success of America's monetary measures of late has not been anything comparable with the success of the measures adopted in the earlier phases of the recovery administration. While formerly the threat of a depreciating exchange or the threat of further inflation had almost the invariable effect of sending up prices at home and pulling the value of the dollar down, now the Government are feeling that their measures are not working with the same smoothness. In regard to the silver policy, for instance, an unexpected opposition is being encountered from China. The proposal for another cut in the value of the dollar is also being rendered more and more difficult of consideration, not to speak of achievement, because of the partial success that has attended the re-financing programme of the Treasury. Indeed, the resources of the Treasury and its needs are so much out of tune that one would be justified almost in saying that this idea has been abandoned. Mr. Roosevelt's speeches, at any rate, do not breathe the same enthusiasm for the reduction in the dollar as they used to in the past. The markets do not seem to have any doubt that for all practical purposes the stability of the value of the dollar in terms of gold is guaranteed. The result of all this renewal of confidence in the dollar is a bear covering wihch accentuates the seasonal demand for the American currency. All these have told with particular weight on sterling and the near future of sterling is distinctly bearish.

It is situations like these that are fertile of rumours and that are so inviting for speculation. It is interesting that, according to a Reuters' message, people believe that dollar-sterling stabilisation *pourparlers* are now in progress. It is also stated by others that the British Control Fund has been a buyer of dollars in order to establish the old parity of 4.86 to the pound. One looks in vain at the quotations of last week for any sign of such artificial pressure of sterling with a view to bring the pound to the level of the old parity. If the British Control had been operating to such an end, at a time when the seasonal demand for dollars is unusually high, it is difficult to explain the small ups and downs that are visible, unless it be supposed that America had been counteracting such pressure. It is certain that, if the British Control had betrayed any anxiety to bring sterling down to the level of 4.86 it would be the signal for a much stronger bear attack than there is reason to think there has been. On the other hand, it might well be that there is less of a gulf between the American and the British authorities as to what would constitute a fair ratio between the pound and the dollar. It would be more than anyone can say whether there have been *pourparlers* between the two countries regarding the stabilisation agreement. On the supposition that negotiations for stabilisation between America and Great Britain could be begun with more success now than at any earlier time, it would still be necessary for the two countries alike to have some definite idea of what the gold standard countries are going to do. And in this view it is singularly unfortunate that the position in the gold standard countries should be most obscure and most complicated just at this juncture. If, in face of all this obscurity and complication in the gold countries, America and Great Britain should proceed to stabilise their exchanges, the wisdom of their action could by no means be obvious. So far as Great Britain is concerned, the British Control would have no difficulty in preventing a decline in sterling below the level of 4.86 which, according to certain reports, is the rate which even the American authorities are prepared to grant as the proper level of the value of sterling in terms of the dollar. For, once sterling is brought down to the level of 4.86, the problem would not be so much to prevent a further decline as to avoid, and to render difficult, a rise in the value of sterling as a result of any scaree about the franc or other gold currencies. The international financial world would be ready to recognise that at the level of 4.86 sterling is perfectly safe and that if even owing to temporary causes, sterling should show a declining tendency, the Control would have sufficient resources to combat such forces ; but from the standpoint of the trade and commerce of a country, the stability of the exchanges during a certain period is of prime importance ; and the British authorities would, therefore, be anxious to have some assurance of stable conditions in the gold standard countries before they proceed to negotiate and ratify an exchange agreement with the United States.

What then, are the gold countries actually going to do ! For the moment the devaluation movement has received a check both in France and in Belgium. It has been pointed out already how there was a cabinet crisis over the question of devaluation in the latter

country and how within the course of a few days the Belgian Government were able to overcome such crisis and to give the assurance of political stability and, what follows with it, economic and monetary stability. In the case of France the position is more complicated, in as much as the movement for devaluation is headed by a prominent politician able to gather other groups in support of his movement. It will be remembered that it was pointed out in these columns sometime back, that the proposals made by M. Germain Martin, the French Minister, were such as to give strength to the devaluation caused, however indirectly. It is now learnt that M. Germain Martin has proposed that the Armament expenditure, for which the difficulties were principally apprehended, should be met from a separate loan and that thereby the Frenchman's anxiety for increasing Armaments will be prevented from manifesting itself in a demand for devaluation. But while for the present the repercussions of Armament expenditure on monetary stability may be thus avoided, it is by no means certain that the impression of an unbalanced budget, which armament expenditure by loans would confirm, will not ultimately weaken confidence in the franc. It is yet too early to say whether the proposals of M. Germain Martin have caused any such apprehension in the minds of international financiers. But if they do, then the position in regard to the franc will not have been bettered.

Meanwhile, it is important to note that there is a movement for a fuller recognition and adequate rationalisation of the system of exchange clearing, which has come increasingly into vogue even in the face of opposition from central banks. If the pace at which the vogue of exchange clearing has spread in recent years is any clue, we might also say that exchange clearing has come to stay. Almost every month a new exchange clearing agreement is being concluded. There are nearly a hundred such agreements in actual operation. It is significant that the exchange clearing agreement between Great Britain and Germany, though it has encountered much opposition and even more practical difficulties, does not promise to be terminated soon. It is more or less certain that such defects as the actual working may have revealed during this particular period in which it has been in operation, will be removed and that it will soon form almost a permanent part of the machinery of financial and business dealings between the two countries concerned. What is true of Germany and Great Britain might well be true of any other two nations which have taken recourse to these devices. By far the greatest access of strength to exchange-clearing has come from the League of Nations. So far this body has been unable to make up its mind over what is apparently a problem of the greatest practical significance. The apathy of the League of Nations was due to the fact that on this question the financial and economic committees did not find it possible to come to an agreement. While the economic committee was inclined to view with favour its increase and even actually to recommend its further adoption, the Financial Committee, where the influence of the central banks is predominant, has been opposed to it. And the League of Nations, chary of advertising differences amongs its own prominent bodies has kept the question in abeyance all these years. The major countries of the world like France, Great Britain and the United States have not, till recently, felt compelled to adopt such measures ; and their attitude was lukewarm even as the attitude of the League of Nations. And now we learn that M. Lamoureux, the French Minister of Commerce, made a statement in Geneva during Air Mail week. Not that M. Lamoureux expressed himself definitely in favour of exchange clearings. All that he did was to urge an enquiry by the technical organisations of the League into the advantages of a multilateral exchange clearing system. Even though the French Minister of Commerce did not go further than promise an enquiry by the League his words are significant. If one makes an allowance for the reserve inevitable in, and appropriate to, the pronouncement of the member of an important Government, one can see that M. Lamoureux was in favour of rationaling a system which is now well spread over the world and makes no promise of early disappearance. It might well be that with exchange clearing perfected the gold standard countries will find it easier to continue on gold.

At any rate, the representative of the French Government proposed an enquiry into the Exchange clearing in the hope that its perfection may enable France to preserve the gold standard, more easily than it would be possible otherwise. Whether or not the stabilisation of Exchange clearing helps the gold standard countries, to remain on gold, it is certain that it will smoothen out the upsets in the internal exchanges.

MACKINNON MACKENZIE & CO., CALCUTTA

THE TRAVANCORE NATIONAL BANK LIMITED.

(Established in Travancore in 1912).

HEAD OFFICE: ALLEPPEY

Chairman: K. C. Mammen Mappillai, B.A.

In 22 years of constructive, conservative progress the bank has become the biggest among banks incorporated in Travancore and has established a net work of 27 branches which are really well equipped, efficient financial service stations.

With a branch in Bombay and all other important Sea port towns of South India like Madras, Mangalore, Calicut, Cochin and Alleppey and connections by branches and agencies with every centre in the country and abroad the bank can serve the inland and foreign trade of South India better than any other bank. The bank affords complete facilities for collection and negotiation of bills.

BRANCHES.

1. Alleppey
2. Bombay
3. Calicut
4. Cochin
5. Devicolam
6. Ernakulam
7. Kottayam
8. Karaikudi
9. Munnar
10. Madras (Broadway)
11. Madras (Mount Road)
12. Madura
13. Bangalore
14. Ootacamund
15. Palghat
16. Pollachi
17. Perumpavoor

TREASURY BILLS

The Controller of Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Tuesday, October 2. The total amount offered was Rs. 2,53,00,000. Tenders at Rs. 99-10-9 were accepted in full and those at Rs. 99-10-6 were allotted approximately 57 per cent. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-5-11 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Tuesday, October 9. Successful tenderers should make payment on Friday, October 12. Other conditions are as usual.

Three months' intermediates will be sold from October 3 to October 8, at Rs. 99-11-0 per cent. subject to the conditions previously announced.

Three months' intermediates sold from September 26 to October 1 amounted to Rs. 1,33,25,000.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, October 3, tenders to the amount of £915,000 at 1s. 6 1/16d. were received and allotted in full.

£1 million will be offered for tender on Wednesday, October 10, on the same conditions as previously announced.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

JUTE RESTRICTION

Conditions of Public Support

There is always something strange and incongruous in a Government making a bid for public support. For even in the most democratic countries of the West, Government is a concentration of power ; and it makes little practical difference in short periods that the Government is not irremovable. A Roosevelt or a MacDonald making a laboured plea for public support is always suspect ; for people look for some serious defect in the policy for which a special appeal for sympathy is addressed to them. The difference between Britain and India is obvious. In this country, too, the Government might not spurn public support. But rarely do they go out of their way to secure it. And when they do, a suspicious public is rendered doubly so.

* * *

It is with such feelings, perhaps, that a gathering of pressmen responded to the invitation of the Press Officer to discuss the Jute Restriction Scheme of the Government of Bengal with Mr. Porter, the Rural Development Commissioner. The Indian Press has not taken kindly to the scheme of voluntary restriction. It might be that in some cases criticism of Government schemes is a habit which is not easily shaken off. A similar diagnosis has been offered in our case, too. But our readers can have no room for doubt that our opposition to voluntary restriction is based on a careful examination of past experience and an of the merits of appraisement the question. While scepticism of voluntary restriction is widespread, there has not been as yet any obviously practicable scheme of compulsory restriction. And those, who do not allow themselves to overlook this fact, were naturally eager to avail of the opportunity to discuss the scheme with Mr. Porter.

* * *

The significance of this conference ought not to be exaggerated. Mr. Porter was careful at every stage to emphasize that he was not in a position to answer highly hypothetical questions as to what Government might do. His purpose apparently was to present the Government case in a manner to induce the Press not to make much of its scepticism and to help to give the scheme a fair chance.

* * * *

It should be obvious that if the leading newspapers and journals were to continue to denounce the scheme of voluntary restriction as one doomed to failure, the cultivators would hardly take to it seriously and the pessimists would eventually be proved right. Mr. Porter's idea was to impress on the representatives of the Press that, while the path of compulsory restriction was an extremely thorny one, they could move forward along the line of voluntary restriction if the Press would help to create in the people sufficient confidence and enthusiasm. The criticism of rival schemes, in which Mr. Porter indulged, might be interpreted as strengthening the plea that voluntary restriction is will worth a trial. It is needless here to go over the ground covered by the Rural Development Commissioner. More than one scheme of compulsory restriction has found publication in the local Press. And Mr. Porter's line of criticism was that, either they were impracticable administratively, or they were too costly to be undertaken by a needy Government like that of Bengal. The chief difficulty in the way of compulsory restriction may, therefore, be stated broadly as administrative and financial. The administrative difficulties, if we understand Mr. Porter aright, arise chiefly from the lack of adequate statistics of the area and the yield of the various holdings of the cultivators. There is no doubt that, before any scheme of compulsory restriction is taken on hand, the Government ought to have in their possession reliable statistics in this regard. As for the question of finance, it should be realised that money would be required for two different purposes, for the cost of collecting important statistics and affording some direct compensation for the cultivators agreeing to reduce the acreage under jute.

* * *

We are of opinion that Mr. Porter and most of those who attended the conference at the Writers' buildings, had somewhat serious misconceptions on these two questions. To take the question of compensation first, it was generally overlooked that restriction of output must stand or fall by itself and that compensation has no place in it, economically speaking. Restriction is advocated on the ground that the improvement in prices resultin from a reduction of output would more than compensate the apparent loss in cutting down production. On no other basis is restriction defensible. If the economy of the producer can be balanced only by an extraneous agency offering compensation for the reduction of output, then restriction ceases to be economic. We do not suggest that no compensation ought to be made to the growers of jute under any circumstances. The point is that compensation would not be necessary from a strictly economic point of view. Organised industries never find it necessary to offer inducements for restriction other than the prospect of a higher level of prices. And the essence of organisation in industry is that each productive unit is able clearly to perceive the value of restriction and to make the necessary immediate sacrifice for the sake of the distant gain.

Agriculture is different from industrial occupations in that the agricultural producers are generally speak ing, far less organised and far less in a position to convince themselves about the advantages of restriction. In their case an extra inducement in the shape of a payment for every unit of land turned out of cultivation is almost always found to be necessary and has been offered in many cases. Where the Government of a country is in a position to offer such inducements, it would be unwise and inexpedient to oppose it merely on the ground of economic principle. But where, as in the case of the Government of Bengal, a Government is throughly incapacitated by the state of the finances for such payment, it is obvious that the Government can make a virtue of necessity and rule out of consideration the question of compensation for reduction of acreage. Those who elaborate schemes of levying various charges on jute with a view to provide compensation for the growers, no doubt, mean well. It is also true that the prosperity that would result from successful restriction would amply compensate the expenses thus incurred. But they also help to obscure the essence of the problem of restriction and create the impression that, unless we can succeed in pointing out alternative crops or put hard cash into the pockets of the culti-

vators, our plea for restriction would be unconvincing and unjustifiable. Mr. Porter naturally took up the line that, because the compensation, which is such a large part of the schemes of compulsory restriction holding the field, is not feasible, there is no course left other than to do propaganda for voluntary restriction.

* * * *

Our propose now is only to emphasize the fallacy of this reasoning which is due to the misconceptions behind the idea of compensation for restriction. If restrictionists are confident that, when the production of jute is reduced, the increase in prices would provide more than ample compensation for the cultivators, they have every justification for calling upon the Government to achieve such restriction without worry ing about the question of immediate compensation for cultivators. Thus the question of compensation, when the means for such compensation is not ready to hand, is only a handle for the opponents of compulsory restriction to turn as effectively as they choose. And it is best that they should recognise that compensation is an extraneous introduction into a scheme of compulsory restriction. If it is recognised that compensation is not quite essential, much of the force of the argument on grounds of finance will be reduced ; for the larger part of the financial requirements is on account of compensation for cultivators.

* * *

Even after such reduction of the necessary finances there is, according to Mr. Porter, need for considerable amounts for securing the statistics necessary for the formulation of a programme of compulsory restriction. It was aptly po'nted out in the course of the discussions that the Government want to retain the lack of statistics and the cost of collecting them as a permanent weapon against the demand for compulsory restriction. It is not a little significant that ; though it is more than four years since the agitation for compulsory restriction began, the Government have been urging the same practical difficulties as before. It is certainly legitimate for the people to demand that, if lack of statistics stands in the way of compulsory restriction, the Government ought to have examined the ways of collecting such statistics during these years. It is hardly convincing that Government should repeat the same arguments year after year. The demand was therefore, made in the Conference that in as much as statistics are necessary for every conceivable economic policy, the Government should endeavour to collect them even while they are engaged in executing a scheme of voluntary reduction. A sincere pursuit of restriction, though on a voluntary basis, would require Government to mobilise all their strength and to put their best in to the task. While such endeavours are being made, it should be much easier to collect the necessary statistics. And what is more important, the collection of statistics would involve far less outlay than the thirty lakhs of rupees estimated by the Jute Enquiry Committee as the cost of such a project. It is a legitimate demand that the lack of statistics should not be a permanent obstacle in the way of compulsory restriction.

* * *

Excepting for the insistent demand in this regard against which, it is to be hoped, the Government would not chafe, Mr. Porter may be said to have gained his point. The conference recognised the general difficulties, as things are now at present, of pursuing jute restriction on a compulsory basis. It was prepared also to grant that if any progress was to be made towards restriction it is necessary to give the present scheme of the Government a good chance. The Press may be expected to do its part in creating the proper spirit in the province towards the scheme of voluntary restriction. It would even assist in preventing the masses of cultivators from entertaining that element of doubt about the ultimate success of voluntary restriction which makes all the difference between enthusiastic pursuit and lukewarm acceptance.

* * *

But all this, let us insist, is without prejudice to our case regarding compulsory restriction. We regard the proceedings at the Writers' buildings on Monday last in the light of a *quid pro quo*. While the press, for its part, readily assures its assistance in the propaganda for popularising the idea of restriction, it insists, at the same time, that, in the event of its failure, Government should be prepared to adopt a feasible form of compulsory restriction. And it becomes a duty of the Government to prepare from now for the contingent necessity—and for our part, we regard it as more than contingent—of introducing compulsory restriction. It should not be possible for the Government to rule out compulsion on the same grounds as they are able to now. We would for our part, go further and say that the chances of success of voluntary restriction might be improved upon by Government making it clear that, if it fails, the interests of the province would require them, however much against their will, to force restriction on the cultivators. It is a pity that in regard to the points that were urged on behalf of the supporters of compulsory restriction, Mr. Porter was unable to give any assurance. But from the manner in which he replied to these demands one would think that he was convinced of the reasonableness of the demands. Is it too much to expect that the Government will shortly make an announcement that the collection of statistics will before long be proceeded with ; and that, when it comes to it, pressure will be brought to bear on the cultivators to look to their self-interest. In the absence of such a statement, however worded, the press will find it diffi-

cult to give its full support to the present scheme, unless, of course, the press is more susceptible to official blandishments than we have thought.

BOMBAY PORT TRUST FINANCES

The Administration Report of the Bombay Port Trust for the year 1933-34 should console the alarmists who visualise a Bombay shorn of all her glories as a seaport. The distinct, though guarded, note of optimism that runs through the report is a welcome change from the chronic gloom of nearly every report that Bombay has produced for some time past. It is very gratifying to note that through the varying fortunes of a year, that was by no means conspicuous for any startling rehabilitation of trade, the Bombay Port authorities were quietly striving to achieve the modest, though, under the circumstances, difficult, ambition of balancing their budget. When lowering the deficit alone would be considered as something of an achievement, they have actually finished on the right side.

* * *

They commenced the Revenue estimates for the year under review with a modest expectation of a 2 per cent. improvement in receipts from direct trade sources over the corresponding actuals of 1932-33. On this basis, the estimated revenue was Rs. 249.79 lakhs and this figure was subsequently revised in January 1934 to Rs. 249.08 lakhs. The actual receipts amounted to Rs. 245.37 lakhs. The success of the Administration, therefore, was not due to any unexpected swelling of revenue. It was due to well-planned and bold economies on the side of expenditure, on which the Port Trust authorities deserve to be congratulated warmly. The original estimate of expenditure of Rs. 250.40 lakhs was scaled down to Rs. 248,12 lakhs by eliminating all avoidable items. The actual expenditure for the year, thanks to further economies effected in all departments, was Rs. 245.34 lakhs. The ratio of working expenses to revenue in the year under review was 49.01 per cent. A reduction of 31 per cent. in controllable expenditure is an achievement of which anyone should feel justifiably proud.

* * * *

The year, although free from the periodic political upheavals to which Bombay has become so prone, was by no means devoid of serious difficulties. It included Japan's boycott of Indian cotton from July to December, 1933, happily lifted after the Indo-Japanese Agreement was reached. The imposition of heavy additional duties to protect indigenous industries also had an adverse effect on the volume of trade. The diversion of trade to the Kathiwar ports continued unabated; and the falling off of revenue by Rs. 3.71 lakhs from even the revised estimates may be attributed mainly to the diversion of raw cotton exports to Bhavnagar and other Kathiawar ports during the latter part of the financial year. The odious non-refundable Town Duty of one rupee per bale on raw cotton was operative throughout the year and was not abolished till April 1, 1934. The abolition of this ill-conceived tax should help materially in attracting trade to Bombay and the Government should be congratulated on the vision and courage they have shown in taking a step which should mean an immediate loss in revenue, however salutary it may prove in the long run. In this matter the Government received the wholehearted co-operation of the Bombay Municipality, the Port Trust and the Railway companies. It should be a unique experience of any Port Trust authorities that a number of exporters should regularly despatch their cotton from various coastal ports by country craft for overside transhipment in the Docks instead of railing their cotton down to the Port and shipping it over the wharves. Such was Bombay's experience, where shippers tried to escape the odious Town Duty and most of the wharfage charges. It is hoped that such irregular practices will cease with the abolition of the Town Duty.

* * *

The Port Trust authorities have not been content merely with approximating expenditure to revenue. They have given effect to a scheme of general relief to their leaseholders and tenants which must have proved very welcome to the hard-pressed business community of Bombay. "From October 1, 1933, a general remission of 10 per cent. was sanctioned on ground and storage rents above a certain datum line. In the case of the cotton Depot and Ryan Grain market tenancies the remission was fixed at 15 per cent. with a further rebate of 5 per cent. to tenants willing to deposit a year's rent in advance. The effect of the full concession was to bring the cotton depot godown rents down to Rs. 400 a month, a substantial reduction on the figure of Rs. 675 fixed as the economic rent when the Depot was opened in 1924. Similar remissions were sanctioned in the case of the jaithas and open-sided sheds. These rental concessions are estimated to cost the Port Trust about Rs. 4½ lakhs per annum."

* * *

Despite a drop of some 25 per cent. in trade volume and receipts, and although deficits aggregating Rs. 52 lakhs have been met out of reserves, the Commissioners have been able during the last six years to sanction reductions and remissions in charges, by which trade has benefited to an aggregate extent of over a crore of rupees, whereas the only

increase levied on the Schedule in force 12 years ago, was the 12½ per cent. sur-tax and certain minor charges, necessitated in October, 1932 by the precipitous fall in revenue.

* * *

On the whole, Bombay did not experience a very propitious year. The increase in the volume of imports and exports handled over the last year's figures was a modest 583,000 tons, while the tonnage of vessels birthed at the Docks was greater by 400,000 net register tons. The Report carries the conviction that a far worse situation was avoided by efficient management and well-planned and careful economies.

INDIAN NATIONAL AIRWAYS, LTD.

Probably, the development of aviation in India is not one of the matters which the average man regards from a humdrum standpoint. The thrill of flying does not admit of calculation either for those who have enjoyed it as a luxury or for those who have never been in the air. But the possibilities of commercial aviation in a country of such vast distances should be obvious on the least reflection. The Indian National Airways Limited, which was started in 1933, has made considerable headway during this short time. Experience in working and knowledge of the scope that exists have spurred the company on to fresh tasks ; and it has now extensive plans for substantial developmetn. The new capital issue, the prospectus of which appeared in our issue of last week, has been made with a view to render such expansion possible.

* * *

The Company, it is well-known, operates daily and weekly services in Bengal ; and these are now to be extended. It is also proposed to inaugurate a weekly service between Karachi and Lahore before the end of this year. The delectable land of Kashmir will soon be accessible by air: for the Indian National Airways are surveying an aerial route ; and chartering of aeroplanes will also be rendered possible by this winter.

* * *

Financially, the Indian National Airways have substantial interests in the Trans-India Empire Route and they operate a prosperous Flying School in Rangoon. They have settled the terms of a long lease with the Calcutta Port Commissioners (subject to the sanction of the Bengal Government) of a large area of ground in the Alipore District of Calcutta, which is being prepared as an Airport and which should be ready for service in November next. This Air Port being conveniently situated close to the heart of Calcutta is bound to be a valuable adjunct to the Company's activities.

* * *

For a concern which has afforded such convincing proof of imagination in planning and capacity for practical administration, it should be easy to secure the requisite capital.

THE COMING CHANGES IN THE N. R. A.

The gigantic experiment begun in America is not yet over. And it would be difficult at this stage to assess the success or failure of the N.R.A. But the difficulties that the National Recovery Administration had to contend with elevate the importance of the whole scheme into that of the most unique and stupendous experiment that any nation has ever tried. The spate of criticism has hardly yet subsided. And yet the authors of tht Recovery Administration have gone ahead courgeously along the lines they had planned for themselves. If the N.R.A. succeeds in solving the economic problems that faced America at the beginning of the new regime it will rank as little short of a miracle. Mr. Roosevelt has already proved to the world that a blind faith in the economic platitudes cannot always meet the exigencies of a stituation. The obstacles before the N.R.A. were made more serious by the howl of protest raised by the theoretical fanatics who visulaised a mangling of all their pet principles of economics and finance at the hands of a man who had the courage to fly in the face of every accepted theory. If Mr. Roosevelt succeeds in this stupendous task the whole science of economics will perhaps have to be revised.

* * *

The latest complication that has descended on the N.R.A. was the resignation of General Johnson, who was known to be one of the pivots of the Recovery Administration. This has necessitated a sweeping reorganisation of the entire N.R.A. President Roosevelt has appointed a committee of six headed by Mr. Donald Richburg Legal Advisor of the N.R.A. to take charge of broad plans and future legislation and a committee of five to take over the actual administration in the place of General Johnson. All future decisions and policies and legislation are reserved to Mr. Roosevelt. And every one will admit that the fortunes of a nation could never be in safer hands. The compliment that the N.R.A. have paid to the General by entrusting his duties to a whole Committee is a handsome tribute to a man who made himself invaluable to the nation at a time when its fortunes were hanging in the balance.

* *

Mr. Richberg's committee includes Mr. Harold L. Ickes, Secretary of the Interior ; Miss Frances Perkins, Secretary of Labour ; Mr. Harry Hopkins, Federal Relief Administrator ; Mr. Chester Davis, Farm Administrator, and also the chairman of the new board of five, who will probably be Colonel Lynch.

The board will consist of General Clay Williams and Mr. A. D. Whiteside, heads of Industry Divisions III and IV, respectively, and Mr. Sydney Hillman, Mr. Leon Marshall and Mr. Walton Hamilton, all of whom are at present active members in the National Recovery Administration. This board has been authorized to select its own chairman.

* * * *

General Clay Williams was formerly connected with Reynolds Tobacco Company ; Mr. Whiteside is President of Dun and Bradstreet Inc. ; Mr. Hillman and Mr. Marshll are labour spokesmen, Mr. Hillman being President of the Amalgamated Clothing Workers of America ; and Mr. Hamilton is Professor of Constitutional Law at Yale University.

* * *

President Roosevelt has added *ex-officio* members in Mr. Blackwell Smith, assistant to Mr. Richberg, and Mr. Leon Henderson, N.R.A. Econonic Adviser.

A third committee will probably be appointed later to take charge of the judicial phases of the National Recovery Administration.

* * *

The resignation of General Johnson should bring the question of the attitude of the Administration towards labour to the forefront. The General resigned because the loquacious Miss Perkins, the Secretary of Labour and Mr. Richburg wished to subordinate him to a Board of Directors in order to elicit the sympathies of the N.R.A. for Labour. It would be interesting to watch how this fresh development reacts on the attitude of the Administration towards labour. Those who try to adopt rush tactics towards the N.R.A. in order to bend them to a point of view should remember that Mr. Roosevelt allows only sincere convictions to sway either his actions or his policy. A man who could commence and carry on such a gigantic experiment with

national economies in the face of the severest criticis that has ever been levelled, against administrative action is not likely to allow himself to be cornered into an agreement. Mr. Roosevelt is now working against tremendous odds which impede the progress of recovery at every step. With a little more help and co-operation Mr. Roosevelt might have brought off the biggest coup in the economic history of the world.

PROSPECTIVE SHIPPING CONFERENCE?

The prospects of an early convention of an international shipping conference, hopes of which have been raised by a memorandum of Sir John Simon, will, doubtless, be welcomed all over the world. According to reports from abroad, the British Foreign Secretary has invited the leading Maritime Powers for an exchange of ideas on the restriction of merchant shipping. The shipping world has been so distracted of late. Not the least important feature of the economic nationalism of the post war period is the eagerness of each nation to develop its own shipping. And as economic nationalism implies the abandonment of the orthodox methods, state subsidies for shipping have become a common feature in recent times. As a result of these developments, British shipping has been hard hit and Britain's international balance of payments has been affected severely. The leaders of British shipping have never missed an opportunity to inveigh against the uneconomic practice of granting state subsidies to national shipping. The offenders against British canons were in no mood to listen ; and the hard-pressed British industry was ultimately driven to adopt the very device which it has denounced all along. Only in July last the British Government agreed to grant a subsidy not exceeding £2 million for the relief of "tramp" shipping. But it was made clear at the time that the subsidy was of a defensive nature and was limited to twelve months. Shipowners were at the same time required to press upon foreign shipowners the necessity of adjusting the supply of tonnage to world demand in order to raise freights to a remunerative level. The Government also announced their intention to communicate with foreign countries and ascertain the views as regards international measures for facilitating the abolition or reduction of subsidies and the formulation of schemes for laying up or scrapping all superfluous tonnage. At the time this announcement was made the British Government had no high hopes that an international conference could be summoned with any prospect of success. For they were conscious that while, in the case of Britain, shipping was only a private industry susceptible to the risks of business in other countries shipping was a quasi-public enterprise in which national stakes were high and national sentiment strong. The extent to which the situation has improved has to be carefully examined in order that one might appraise the prospects of success before the shipping conference. The chief obstacles to the revival of the shipping industry of the various nations are the expansion of tonnage that has taken place in the post-war decade, the unregulated and uneconomic character of its working and, last but not least, the shrinkage of international trade that has followed the world depression. All these three problems are so knotty that one cannot be confident of solution.

* * *

As regards the uneconomic practices, rate-cutting may, from the stand-point of the question of restriction, be viewed rather as a symptom than as a disease ; and the British Government and British shippers are substantially correct in urging that it is the larger state subsidies that make such uneconomic rates possible for their competitors. But in the countries, in which such subsidies are being given, they are viewed more as a means of equalising the advantage between the national shipping industry and its well-established rivals, and unless some reasonable assurance is forthcoming that the latter would not use their power to oust the former, there can be no end to the subsidies. Thus one comes to the question of demarcation of spheres as among the shipping industries of the various countries. It remains to be seen how far the British would be able to adjust their ideas to the altered conditions.

The expansion of world trade is obviously the most satisfactory solution to the problems of shipping. Though even in the year 1929 British shipping was not as supreme as in the pre-war days, a return to the conditions of 1929 would be held to be satisfactory to all the countries concerned. Thus the question of the future of shipping depends directly on the larger question of the future of world trade. What are the chances of world trade rising to its former level? There can be no doubt that in the absence of international action, the position will deteriorate, rather than show any signs of improvement. With the nations persisting in the policy of import restriction and quotas, there is little or no chance of a natural re-expansion of world trade.

* * *

There is only one circumstance, which encourages the hope that a better atmosphere will prevail in the shipping, than in most other economic, conferences. Only recently a prominent member of the American Administration is reported to have replied to a question regarding the American shipping industry that it is far better to import shipping services and export much more of American products than to persist in the old policy of subsidising a patently inefficient shipping industry. In the wake of this report in the *Air Mail* newspapers, comes the news that America has called upon the American Shipping Companies to show why all or part of the subsidy of 26 million dollars paid on account of the American mail contracts should not be cancelled. There is thus definite evidence of a change of opinion in American Government circles. And bearing in mind the announcement of Mr. Runciman that the British Government would attempt to get in touch with the foreign Governments, it may be presumed that the note which was forwarded by Sir John Simon is the result in some measure of preliminary feelers.

THE ROAD TO RECOVERY

AND THE ONLY WAY

By SIR MONTAGU DE P. WEBB, C.I.E., C.B.E.

Author of "Advance, India!" &c.

To *Indian Finance* must be given the credit of being the first financial organ in India to point out to its readers that Australia (and *not* Great Britain or the United States of America), affords the best object lesson to India of how to tackle the present economic crisis, (*vide Indian Finance* of 18th August). There is little or no resemblance, as *Indian Finance* very truly points out, between India's economy and that of Great Britain or the United States. Whereas, Australia and India have many points in common. Thus, both countries—

(1) are debtor countries with an annual sterling liability of something like £30,000,000 for interest on loans, etc. ;

(2) are largely agricultural countries exporting chiefly primary products and raw materials ;

(3) have suffered a grave loss of national income owing to the fall of prices which has halved the receipts of producers, transporters, exporters, and taxpayers in general, causing grave distress, unemployment, and widespread approach to bankruptcy ;

(4) have suffered considerable stringency of public finances local, provincial, and central,—and consequent great difficulty in balancing public budgets ;

(5) have experienced considerable difficulty in collecting the revenue required to meet expenditure—external and internal—and also a difficult foreign exchange position.

Australia has largely overcome these troubles, *not* by allowing matters to drift, as the Government of India, at Whitehall, Delhi, and Simla have unfortunately done, but by taking active steps to deal with and correct the adverse situation in all its aspects. Ignoring financial orthodoxy in which the British Government appear to be hopelessly hidebound, Australia let go the gold standard in 1929, and by 1931, the Australian pound sterling would only buy about 15s. 5d. of British money. This had the effect of checking to a large degree the fall of prices in Australia, and so saved Australian producers from all-round bankruptcy. It also checked imports, (British manufacturers had to grin and bear it), and facilitated Australian exports, thus providing the favourable trade balance from which to meet external sterling liabilities. At the same time Australia reduced substantially the salaries of her public servants, thus making a really self-sacrificing effort to balance her budget without imposing frequent and crushing increases of taxation,—a striking contrast with the practice adopted in India where many Officials, especially in Madras, appear not yet to have realised the gravity of the crisis.

Had the Government of India acted similarly, India would have been saved much of the present economic misery. As *Indian Finance* courageously recognises, a re-rating of the rupee, even now, would greatly hearten enterprise (and, I may add, save many from coming bankruptcy). But would it, at this stage of the catastrophe, permanently raise India from the economic decline in which she is at present involved? I think not. The disease has proceeded too far; the malady is now too widespread. The whole world, with certain important exceptions, is now involved. The great economic struggle has now become a struggle for life, a struggle between gold-money, sterling standard, and silver-money nations. The situation can, perhaps, be most accurately and vividly described as a struggle for life between East and West. And India, artificially bound by her over-rated rupee to the sterling-cum-gold monetary system of Great Britain, must clearly be classed in this matter as WEST. The great question of questions is—Can the WEST (*including India*) hope successfully to resist the economic competition of the EAST, in its own markets, and in the markets of the world when the EAST is advancing by aid of, in effect, an EIGHT-ANNA RUPEE?

Let us think this out. The EAST has the advantage of low-priced labour, willing industry, the best possible machinery, the most efficient supervision (imported from, or trained by European and American experts), *plus* very cheap money tools that, be it noted, are fully as effective *in the East* as gold money, or sterling money, or 1s. 6d. rupees silver money, or sterling money, or 1s. 6d. rupees are in the West. And as neither Japan or China is compelled to use silver money made artificially expensive by Western interference, they can, and do, buy and sell by aid of, in effect 7d. or 8d. rupees. This, of course, hampers their purchases of foreign goods, especially manufactured goods, *but greatly facilitates their sales of their own goods, especially their own manufactured goods.* Can India possibly compete against such a monetary advantage? Obviously not. India will therefore be everywhere undersold, not only in her own home markets, but also in those overseas markets in which her producers and manufacturers rightly expect to secure a fair share of the trade.

We have already had a taste of what Japanese manufacturers can do. But this is only a foreshadow of what is coming when China, with her vast natural resources, her millions of alert and industrious workers, her undoubted genius for good workmanship, and her imported and highly expert organisers, adds her forces of competition to those of other cheap-money competitors. India's economic and industrial progress will assuredly be checked, and probably forced back, unless.....

Unless what? Unless India now raises her voice and makes an insistent, unanimous, and unalterable demand for the re-opening of her Mints to the people to the free coinage of silver—good, solid, full-legal-tender rupees. That step alone can give India relief, augment her strength, and put her producers and manufacturers in a position to meet, and overcome, all competition.

Some inexperienced people imagine that a re-opening of the Indian Mints to the free coinage of silver (in agreement, of course, with other silver-money using countries, including the U.S.A.), would probably mean an eight-penny rupee. Some silver enthusiasts have gone so far as to say—Why not? Why should not India have an eight-penny, or at any rate, a shilling-rupee? Government Officials and others have already shuddered at the idea of a 1s. 4d. rupee (thinking more, I fear, of own present liabilities in England than the welfare of India) ; and any talk of a 1s. or an 8d. rupee would drive such individuals into hopeless and permanently irrational opposition.

WHISKY
As Good To-day as
in the Good Old Days

I am snatching a few minutes just prior of to the departure of the steamer to dictate a few lines gossip. My readers might wonder why, even amidst the bustle and excitement of the first stages of a prolonged foreign tour, I should strain myself to send these notes. For one thing, I have myself no small idea of this feature of mine or the value which the readers of *Indian Finance* attach to it. For another, I am still hoping that I will not allow a break in this link between me and my readers which I have maintained, and strengthened assiduously, all these years. Not that I under-rate the difficulties of sending, week after week, and in time for publication, a bunch of gossip from whatever corner of the world I may find myself in. But if eagerness has any place in achievement, I can well be sanguine about my being able to do it even during the three months in which I shall be hurrying from one strange place to another. I do not know if my readers would prefer me to dole out after my return home the information and the impressions that I shall be gathering during the tour. But, as I said, for my part, I would prefer to keep this link unbroken ; and except that I am confident of being able to do it, I should not have minded adding a week more to the three months of probable discontinuity in the gossip of Eavesdropper. If, at the very beginning of the tour, I should omit to mail to the office the notes for my gossip, there would be even less chance than there is of my continuing to furnish what I have been encouraged to think is the chief popular attraction of this journal.

The fact is, so far at least as this week is concerned, I have, indeed, a lot to write, and my readers should have had more than my usual quota, instead of the fraction that I am now sending. But the whole of yesterday, I had to bustle about. And, particularly, I was snatched away by force to the Annual Meeting of the Tata Iron and Steel Company. There was no escape from this engagement ; for an engagement it was, not, of course, fixed by me, but fixed by friends who thought it impossible that I could be in Bombay and yet keep away from the meeting of the Iron and Steel Company. I had sensed the feeling here within a few hours of my arrival in Bombay. I had myself contributed in no small measure to the lively interest of the shareholders in the affairs of the Steel Company. I had suggested a point or two for which the spokesmen of the shareholders' interests might haul the management over the coals. For nearly a decade, I had not attended the carnival of Bombay's annual general meetings. There was thus no resisting the importunate entreaties of friends who, perhaps, looked to my presence as a source of strength.

As I squeezed into the seat on the platform and watched the proceedings of last evening, I was struck by the aggressive growth of the shareholders' agitation in these ten and odd years. Time was when annual meetings of limited companies used to be a mere humdrum affair, when, if there was anything done, it was a bit of log-rolling among divergent interests. The Indian shareholder is even more apathatic in the affairs of companies that the average citizen in this country is towards public affairs. And if in politics, I used to think, each country gets the Government it deserves, shareholders of companies get the management they deserve. For reform of company management, I had thus looked forward to the vigilance of the shareholder, as the only safeguard of efficient management. But those who like me have waited for the growth of intelligent interest on the part of the shareholder in the affairs of his company, have not had much to strengthen their optimism. There was little of that enlightened self-interest, which prefers first-hand examination to interested rumour, which transforms criticism into firm remonstrance and useful suggestion and break the hiatus that obtains unfortunately between capacity and integrity. Interested as I am in shareholders coming into their own, I have always noted the more regrettable features and phases of the shareholders' agitation. I had even felt at a stage that those, who were taking the agitation to excess, had given the movement an abiding setback, and it would be long before the evolution which I have at heart could progress.

It was a pleasant surprise, therefore, to me that the shareholders' agitation is still waxing strong. New champions have come into being, new methods have been evolved ; and, altogether, shareholders are now able to make their force felt on the puissant interests that control the fortunes of our business concerns. It is a strange combination of the old order and the new. Not only was there Mr. J. J. Kapadia and Professor Davar, the stalwarts of the Bombay Shareholders' Association, but there was also Mr. Shamdasani. His presence at the annual meeting of the Steel Company only served to emphasise that he is now a back number. I am sure he is not aware of the change that has occurred and is still occurring all around him. But for his strident voice and unconquerable brass, the audience are now in a mood to shout him down. But above all shouts and hisses, cries of "No" and yells of "Sit down," Mr. Shamdasani can harangue at the top of his voice and insist on being heard and manages to be heard. But it is obvious he is being pushed out of spot-light and others have stepped forward and enjoy all the glare of publicity.

There is Jaganmohandas J. Kapadia who is able in presentation of facts, thorough in his knowledge of

figures, though far too long-winded and almost wearisome. But he makes his points with telling effect and the audience is with him.

Professor Davar is another type of an "agitator speaker." He is more terse and to the point and delivers his warnings with all the authority of one, who has already achieved many a notable success for the cause represented by the Shareholders' Association, of which he is the President.

The three of them took up nearly three hours by their oratory which was good in parts but effective on the whole. Sir N. B. Saklatwala, who presided, did well in allowing all steam to escape. At the end of it all, he proposed a compromise that the Directors would, on being satisfied with the current half-year's results, which will be ready shortly, pay interim dividend on second preference shares. By the time this offer was made, feelings had run high and the other side felt that there was not much in the Chairman's gesture. Professor Davar and his associates wanted payment to be made now and here. On the side of the Directors, retaliation took the shape of a withdrawal of the offer. This portion of the business ended in a cresendo of bitterness and rancour. On show of hands, the amendment of Mr. Kapadia was carried. Poll was demanded by what may be called the Treasury benches. It was a foregone conclusion that the Directors would win on technical poll. The whole episode made me feel that, if prior to the meeting, the authorities and the "agitators" had met, discussed, exchanged notes, and came to proposals and counter-proposals, the compromise offered by Sir N. B. Saklatwala would have been carried unanimously. As it was, the shareholders left with the feeling that the Directors were *zaberdusts* and the Directors were chagrined that the shareholders were trying to inflict *zulum* on those who are in power. Sir N. B. Saklatwala showed tact; but the stage for tact was, I felt, not in the hours preceding the meeting.

There is a whole crowd of reflections which this has induced in my mind. But I have hardly the time to express them and I would not at this juncture take up themes on which I have an unbridled garrulity. But before I sail, I must make good a serious omission and add my tribute to the new booklet by "G. L. M." G. L. M., as Chairmen at meetings are wont to remark in opening the proceedings, needs no introduction to the readers of this journal. As he himself has confessed in his acknowledgement in his book, he has become an integral part of this paper. Almost all the recent sketches and skits embodied in his *From Wrong Angles* (Price Rs. 1-8 available at 70A, Chakrabere Road north, Calcutta or this office) were published in these columns. My readers all over the country have told me the avidity with which they have devoured these contributions of G. L. M., the pleasure they have felt when they found these initials in an issue of *Indian Finance* and the disappointment when they did not. Here for the first time they will get a collection of "G. L. M.'s"—a compilation comprising all his humorous and satirical writings.

When G. L. M. came to Calcutta over six years ago, wrote in these columns about his philosophical writings in the *Bombay Chronicle*. If I am not mistaken, he is a first class in M. A. of the Bombay University by his thesis on the social thought of Bertrand Russell, and his fun, too, is not mere frivolity or piffle; there is a view-point and a philosophic angle behind all his wit and laughter. G. L. M. was once compared to Stephen Leacock by my friend Pothan Joseph, the brilliant Editor of the *Hindustan Times*, who, incidentally, is one of the few serious competitors of Gagan Mehta in the peculiar line of inverted thinking, which he has been making his own during the last few years. In this sphere, I have felt, G. L. M. has a rare and uncanny gift for spinning intellectual yarns. He writes with ease and sublety; he writes on a variety of topics and uses a variety of forms, interviews, forecasts, essays, speeches and so forth—and yet there is a unity of plan, a coherence of scheme underlying all this mirth. He has an almost astonishing control of *words* and mere words and phrases carry him on to new points of view, fresh pinnacles of wit. The present volume gives an insight into the evolution of his humour; from the personal to the impersonal, from concrete situations to abstract ideas, from political slogans to economic catchwords. Even when his wit is directed against any person, it is so delectable and delicate that those, who are the victims of his fun, cannot resist laughing at themselves. At least I, who have been a not infrequent target of his darts, have wholly enjoyed his fun at my expense. *From Wrong Angles* is an admirable title of an admirable feast of wit and laughter. I heartily recommend it to all my readers. And I would only take this opportunity of reminding G. L. M. that it is this paper which has drawn humour out of his philosophy and helped him to develop his latent powers in a manner which has now become patent to him. May all things be viewed more and more from such wrong angles!

OLYMPUS

(FROM OUR CORRESPONDENT)

Simla, October 3, 1934.

There is a lot here in the air about the Reserve Bank. I am told a number of decisions have been taken ; but I doubt whether these will be published soon. All that Government for the moment seem anxious about is to tell the world that they have not slept over the Reserve Bank programme and that they hope to keep to the plan they have in view, namely, that the Bank should be started by April 1, 1935. This means that, once the Bank starts functioning, it will have to deal soon with the scheduled banks and these may be asked to submit their deposits within three months of the opening of the Reserve Bank.

* * *

Of course, there are hundred and one details yet to be worked out. For instance, where are the Reserve Bank buildings to be located? They must be central, so that banking and financial houses may not be put to inconvenience. At the same time, it is not easy to find a permanent home for the Bank in the cities which are already overcrowded.

* * *

So far as Bombay is concerned, perhaps, the Bank of Bombay's building may serve the purpose after considerable alteration. Similarly Calcutta may provide temporary shelter to the Reserve Bank in the old Alliance Bank Buildings. Delhi's Imperial Bank Buildings in Chadni Chowk are spacious for the purpose. However, nothing is yet settled and, no doubt, they will be settled finally by the Board of Directors as soon as it is constituted.

* * *

It is in respect of the *personnel* of the Bank that no news is yet available and speculation continues to be rife. Sir James Grigg is keeping his secret well ; and no whisper is heard here as to what his intentions in the matter are. Unless I am wrongly informed, it may take another month before Sir James makes any announcement on the subject. Perhaps he finds it difficult to reconcile various interests and to find the right man for each job.

* * *

I am told that early next month all the important announcements with regard to the Bank may be made, so that the present suspense may be removed and the Board of Directors may start functioning.

* * *

Indian Finance has figured in a Commerce Department communique. It has taken the authorities here a month to make up their mind as to what form their "contradiction" should take. Whatever may be the view of the Commerce Department, I may tell your readers that hardly any one here thinks that the *communique* really contradicts *Indian Finance*.

* * *

Whatever the sequence of dates and whether the Government of India's decision was taken beforehand and was adhered to later on, the fact remains that the British steel manufacturing interests were consulted in "confidence" over the Government of India's proposals—which privilege was not extended to the Indian steel interests who had to make the representations on the Steel Report without any idea of the Government of India's intentions.

* * *

Further, it was quite open to the Government of India to change their view if they so desired, and the mere fact that they did not, in fact, change their views, does not reduce the offence so well exposed by *Indian Finance*. There is no doubt here that, whatever the "official" view may be, people here are convinced that the Government of India have exposed themselves to a grave charge.

* * *

This week the Railway Conference Association holds its annual meeting. The problems before the Conference are more or less the same, with one addition—the Rail-Air competition. Hitherto every attempt made to deal with motor competition has failed, as railways cannot really compete with private enterprise but now comes another problem—that of civil aviation. Five years hence it will be no mean challenge. Should time be taken by the forelock and should railways come into line and operate their own air services?

* * *

I do not see why the Government should not take a bold line, in this matter at least. Motor competition is beyond their control but air aravel is entirely within their control. Why should not railways be allowed to undertake these themselves and run these services? It is really more economical for these railways to do so ; because they would not have to incur heavy overhead charges and would not need special staff equipments.

* * *

Unless red tape has to have its own toll, there is no reason why existing staff should not do for the additional work involved in running air services. I really feel that it would be criminal on the part of State to let their railways delay in capturing this unique opportunity of operating their own services and capturing a market which is bound to develop.

* * *

Perhaps Sir Joseph Bhore, Sir Guthrie Russell and Mr. Williamson who will be the chief speakers at the Conference will say something on this point. But even if they do not take a bold line I expect the Conference to look ahead and be ready for taking over responsibilities which would, in course of time, be of immense benefit to the State for running air services between all the important centres of India.

* * *

Echoes of the election fight are reaching here from all over India. Particularly Sir Shanmukham Chetty's speech has been discussed here with considerable avimation. Of course, Government circles are happy that he has hit out ; and they had been panting for such a bold declaration against Congressmen. But Sir Shanmukham's friends here feel that, while that speech has made his election to the Chair *pucca*, it may add to his difficulties with his electors.

* * *

Sir Shanmukham is the best judge of what he should do in the circumstances. He is not likely to make a speech which will annoy his electorate. But there is a feeling here among some people that the speech may prove a little harmful. The opinion in these quarters is that Sir Shanmukham would do better by keeping out of politics and leaving people to judge his excellent work in the Chair and vote accordingly.

THE GATEWAY OF INDIA

(FROM OUR CORRESPONDENT)

Tuesday, September 26.

The administration reports of the major ports of India for the past financial year sounds a faint note of optimism. The importance of Bombay as a port has been rapidly dwindling during the past decade. The Town Duty on raw cotton—Bombay's staple industry, gave it an unsavoury reputation as a port. And latterly, the growing importance of Kathiawar and the slow but steady diversion of trade from Bombay have greatly complicated matters. It was seriously apprehended at one time that in a few years the once flourishing port of Bombay would become merely the starting point of P. & O. steamers, and would lose all its importance as a port. The report of the Port Trust authorities should lend heart to those who still believe that it is possible to revive Bombay's glory. The gross earnings of the Bombay Port for the past financial year, although below the peak revenue of 1929-30 by rupees sixty-six lakhs, was Rs. 7 lakhs higher than 1932-33. There was an increase of 580,000 tons in imports and exports, and 400,000 net registered tons in shipping. There is therefore room for hope that if Bombay is spared any further political turmoils she will recapture her fugitive glory.

The Government of Bombay have also shown great energy in tackling this serious problem. The Town Duty on raw cotton has been abolished and the Bombay Government have kept up the ceaseless pressure on the Central Government in the matter of the Kathiawar ports. Some two years ago, the Central Government turned down Bombay's protests and affirmed that they do not regard the diversion of Bombay's trade and their own revenue as of sufficient importance to justify their interference. Since then the situation has definitely worsened. The complacence of the Central Government is completely ruled out by the gravity of the problem as it stands now. It is rumoured that a conference of the states concerned is being contemplated by the Central Government. There are serious difficulties in arriving at a settlement, because the problem is not merely economic but has a distinctly political aspect. It is hoped however that the necessity of a settlement will make the settlement possible.

Another important feature of the Port Trust report is a survey of the measures taken by the Administration to retrench expenditure and reduce rates and changes. They have actually achieved a reduction of nearly 30 per cent. in controllable expenditure and only thus could the distress years be outlived. It is gratifying to be able to hope that Bombay will not suffer a serious falling off in her importance as a sea-port.

The trouble, however, is that Bombay's problems are not mainly economic. The political situation in Bombay gives a sinister aspect to every thing concerning Bombay. The recent strike revealed the presence of a considerable, though secret, communist activity amongst the labouring classes of Bombay. In a manifesto issued recently in Bombay by the Communist Party in India an attempt is made to wreck the conciliation machinery between the employers and the workers in Labour Disputes which the Bombay Government have planned to establish. It is written, as all such phamphlets are written in violent and fiery language and exhorts the workers to combine for a sanguinary revolt. It is difficult to fight a hidden and subterranean force and this makes the communistic menace in India a more serious problem then the red-hot orations in Hyde Park. The question whether communism is suited to the genius of India need not be gone into here. But it is certainly true that the presence of a secret and subtle opposition to the administrative machinery makes the situation doubly difficult to deal with.

Bombay is getting ready for the forthcoming elections in the Legislative Assembly. The electoral rolls have been prepared, and the election is likely to be held in the first week of November. The recent action of the Income Tax authorities in making Rs. 1,000 a year as the minimum taxable income has helped to swell the electorate. Bombay has now 57,523 voters in all the constituencies. And the election therefore is likely to be a more elaborate affair than in previous years.

Bombay has stolen a march over other provinces with its go-ahead policy in the matter of fisheries. The launching of the Lady Sykes marks a fresh chapter in the history of Bombay's fishing industry. The need of a speedier transport of fish from the catching to the landing sites has been felt for a long time. And the Lady Sykes is one of two motor launches ordered by the Government.

(*Continued from page 847*)

individual might in his own way increase the volume of domestic services. An additional servant, a cook, a part-time tutor, a steward, these are some of the functionaries which a normally well-to-do man could well afford to have ; and a change of attitude in this respect will mean not a little to those who find themselves without the means of subsistence. Those, who seek to benefit the unemployed, should canvass opinion in favour of such measures ; and it is only by steps like these that we can move out of what is, assuredly, a deadlock.

The tour which Mr. Livingstone, the marketing expert of the Government of India, is now making in the South has been duly featured in the local papers. It would appear that Mr. Livingstone is engaged in gaining first-hand knowledge of conditions in the agricultural South ; and he has also been visiting the Native States of Cochin and Travancore, where the agricultural problems present themselves in a somewhat concentrated form. It is learnt from the news reports that Mr. Livingstone has been addressing meetings at important places like Cochin and Trivandrum on the questions with which they are primarily concerned. It is not clear that the news reports have attempted to give an adequate idea of what Mr. Livingstone had to say ; but there is nothing new. But it is, perhaps, unfair to expect Mr. Livingstone to be doling out novelties on the subject of marketing. After all, marketing is eminently a practical business, in which so much depends on the persons who try to market things. All that corporate endeavour can do is to eliminate the handicaps which arise from the apathy of society to the question of proper conditions of marketing. The least analysis of the problem of marketing will show that it is the business of society as a whole to provide safeguards for the individual agriculturist against his more unscrupulous neighbour or competitor. The capacity to wring the best price out of the buyer, the agriculturist has to have himself. No scheme of marketing, that Mr. Livingstone can devise, can create that capacity where it is now lacking. All that society as a whole, and Government in particular, can do is to ensure certain conditions in which the unscrupulous and the inefficient may alike be put in their place. From the accounts that appear in the newspapers about Mr. Livingstone's remarks it would appear that the marketing expert of the Government of India has laid the greatest stress on the need for standardisation and grading, which will enable the honest and the efficient to come into their own. Until and unless South India learns how to make quality obvious, there can be no real recovery of agriculture.

SOUTH INDIA

THE MARKETING EXPERT IN SOUTH INDIA

(From our Correspondent.)

Madras, Oct. 2.

Neither by preference nor by compulsion would South Indian politics figure too frequently in these columns. Of choice, there can be no question ; for there is nothing so attractive in the politics of this Presidency that the correspondent here should transgress the obvious limitations of a financial journal and take an excursion into the field of politics. And as for compulsion, thanks to the depression in the agricultural products and the immense potentialities opened up by the Hydro-electric projects, there is much, indeed, that can well usefully fill this feature of *Indian Finance*. But there are occasions when one feels tempted to refer to political developments also. Nearly a month ago I referred to the question of the admission of Brahmins into the non-Brahmin Party. This oxymoron will, of course, disappear if you call the non-Brahmin party the Justice party. It has been brewing over a long time ; and it occurs now almost as a matter of course. Those who have been behind the change naturally make much of it. Sir Muhammad Usman claims that he and his colleagues have set up a model for all India. To ask what it is a model of would, perhaps, be an impertinence to an Ex-Governor. But, those who have not been able to enthuse over this change would want to know how exactly the defects of the Justice party are to be removed by the removal of the ban on the Brahmins. Though Brahmins have lived through a period of pointless villification, it is by no means sure that they have lived it down yet. And however much Sir Muhammad and his colleagues might wish to gain political respectability by the adhesion of moderates of all classes and creeds, the Moderates, I mean, those who have been moderate without any communal affiliation, are so used to ploughing a lonely furrow that they would not be exactly anxious to make common cause with the Justice party. Nor would the chances of the Justice party at the next elections be enhanced by trotting out a Sastri or an Aiyar as a Justice candidate. On the other hand, it might well prove that a Brahman candidate for the Justice party would have to encounter more opposition in the country than a non-Brahmin candidate ; and it is over such a dubious step that the leaders of the Justice party are now in hysterical self-congratulation. The worst part of it is that the whole change has been described as the removal of the ban on the Brahmins as if the Brahmins were untouchables dying to enter the sanctum of the Non-Brahmins !

What really, one is tempted to ask, is behind this commingling of Brahmins and non-Brahmins in a moderate party ?

I have heard it said that this move to fraternise with the Brahmins is actuated by the fear of the classes below. I do not know if Marx has said it anywhere in his writings ; but he should have seen that very often the lowest classes of society hate the intermediary classes even more than those in the topmost rungs. A any rate, there is not much love lost between the depressed classes and those whom the Justice party had been championing all along. With the depressed classes coming into consciousness, with the Congressmen preaching social, religious and political equality, with Communists doing their bit to raise the classes below, there is, perhaps, a genuine fear that the political triumphs of the last few years of the Justice party might not last for long. In any attempt to check the rising tide of the masses, Brahmins who had proved their devotion to the past by standing by a foreign government through thick and thin, ought to be particularly serviceable. I cannot vouch for the accuracy of this diagnosis ; but I have heard many say the same thing and I am only trying to account for what is, perhaps, faintly perceived. If this is true, the present removal of the ban on Brahmins may be viewed as the beginnings of a Fascist movement in India. For let it remembered that Fascism is the result of the mental reaction of the middle classes to the growing demands of the masses.

If proof were needed for the shallowness of the attempts to cure middleclass unemployment, on which I dwelt last week, it was furnished by a meeting which was held early in the week under review in Mylapore. There was hardly any speech, in which there was not a painful attempt at a profound interpretation of social and economic phenomena. But there was hardly any, too, which came anywhere near the essential points which it is necessary to understand if the problem of unemployment is successfully to be tackled. There are, indeed, two ways of solving the unemployment problem. One way is to secure that expansion of basic productive activity which will bring about an absorption of the unemployed by big industries and other productive concerns. The other is to make a concerted effort to increase the number of workers even within the limits of productive activity, as it is. For instance, individuals and business concerns could increase employment by relieving those who are now overworked. Certain classes of individuals, who can afford it, may also increase personal service and thus create employment. The Government, too, could do the same. The speakers at these meetings seem to have been fairly oblivious of the distinction between these two ways of increasing employment. They are apt to dwell on the woes of the unemployed, rather than on the ways of affording relief to them. One of the workers who attempted to gather statistics of the unemployed complained that in most cases the unemployed have shown themselves chary of supplying the requisite information and that, in some cases, they showed even hostility. This is hardly surprising, from the way in which these sympathisers of the unemployed have gone about the task of giving their sympathy a tangible and useful form.

When you come to think of it, is there any third way of relieving the unemployed ? And these meetings, which express so much concern, are they ready to explore the means of achieving their ends by either of or both these methods ? So far as expansion of productive activity is concerned, it involves the larger questions of national economic policy, which meetings like these will hardly affect. But there are certain specific demands which the public can make of the Government and which will relieve unemployment. It was common sometime ago to cite the lack of technical education as one of the causes of middle class unemployment ; and now that there are experienced technicians actually thrown out of employment, the whole talk has ceased. Within limits, it is, no doubt, true. But how many of us stop to think of the uselessness of stressing technical education when the most obvious course of employing educated men has been constantly neglected by the Government ? The first task of those who have learned is to teach. In a country where the percentage of illiteracy is barely short of the centum, there should be a large avenue of employment for men of all grades of education. A demand for the spread of education and a readiness on the part of the taxpayer to make the necessary sacrifice will in itself contribute a great deal to mitigate, if not ultimately solve middle class unemployment. Likewise the moneyed classes, if only they were prepared to invest more freely in the industrial ventures that have been made possible of late by protectionism, will help to create new employment. Each well-to-do

GREAT BRITAIN

EXPORTS AND IMPORTS

The export and import figures for August 1934 are far from reassuring and the wave of optimism that was sweeping over the country since Mr. Chamberlain's presentation of the "recovery budget" seems to have completely expended itself. Dark clouds of doubts and misgivings are gathering once more on Britain's economic horizon and the lurid flashes of a sinking sterling help only to aggravate the situation. Unemployment is slightly on the increase, a slump is noticeable in trade which can hardly be fully covered by seasonal arguments and not even a revival of prospects of the League of Nations can fully atone for the deepening gloom that is settling once more over Britain's industrial outlook. While the powers-that-be talk with tragic complacency of the potency of planned economy and pin their faith obstinately in quotas and tariffs the barque of England's international trade is slowly running aground.

The total exports of Great Britain in August were £35,391,606 as against £37,358,340 in July and £35,297,184 in August 1933. Imports totalled £60,027,050 against £58,026,218 in July and £56,675,267 in August 1933. Re-exports collapsed completely and reached their lowest level since September 1932.

August is admitted to be a bad month for trade when exports decline and imports increase, due to seasonal reasons. But the extent of the decline and the increase this year can hardly be explained by the usual seasonal arguments. For the first seven months of the year exports plus re-exports maintained an average monthly gain of £3,063,700 over 1933. In August, this dropped to a meagre £94,400.

If we sift the statistics published, the biggest decline is found to be in the exports of coal. While there were small gains in the case of exports to Canada, Denmark, Holland, Algeria and Brazil, there were serious declines in shipments to France, Germany, Italy and Egypt. In short, the effect of the Polish competition is every month becoming more pronounced.

In heavy manufactures also the decline is very noticeable—from £26,048,068 in July to £25,085,202 in August.

The improvement in exports in the textile industry was, however, fully maintained. Thanks to Imperial Preference, the export of rayon piecegoods and rayon mixtures to the Dominions increased considerably. Artificial silk yarn and piecegoods recorded fair gains. 897,676 lbs. of yarn were exported in August as against 628,027 lbs. in July.

Non-ferrous metals fell off severely though iron and steel exports were not seriously reduced. Tin exports to U.S.A. have practically ceased only 10 cwt. having been exported during August 1934. The figures for non-ferrous metals were £778,317 in August against £1,263,532 in July.

Machinery to the Empire countries, motor cars and vehicles, motor tyres—all experienced a setback in August.

The great fall in re-exports is due mainly to the decline in the shipments of wool to Germany. In August 1933 the re-exports amounted to £334,324 and this year they totalled only £37,730.

On the side of imports, raw cotton shows a good increase. There were higher imports of iron ore and non-ferrous ores—a sign perhaps of increased activity in the heavy industries. Wood and timber imports continue to increase proving, perhaps, that the building boom has not yet ended.

There was a remakable increase in the imports of oilseeds which jumped from £1,598,548 in July to £1,966,,340 in August.

The increase in the imports of machinery should be a disquieting item to the iron and steel interests of Great Britain and the fact that £51,000 out of the total increase of £92,000 is from the U.S.A. goes to prove that America is quick to sieze the double advantage of a depreciated dollar and a weak sterling.

The financial policy of Great Britain seems to have fallen into a vicious circle. The weaker the sterling grows the greater is the tendency of the authorities to fall back on intensive economic nationalism and the greater the divorce from international trade the weaker the sterling grows. What a pity, England has not any man of Mr. Roosevelt's compelling and powerful personality to cope with a stiuation that is quickly getting out of hand.

It is a pity that the unfortunate experiences of the past and the grave indications of the future do not make the participants in the coal dispute any wiser. The export and import figures referred to above will go to show that a great deal of the fallen fortunes of Great Britain may be attributed to the decline in her coal trade. Yet each of the parties is as inexorable and obstinate as ever. A complete deadlock was reached on September 18 in the South Wales Colliery dispute. The owners refused in very definite terms to abide by the recommendations of the National Industrial Board and stood by their demand that the dispute should be referred to an independent tribunal. Mr. James Griffiths, the Miners' President, announced his decision to await the report of the Miners' Federation of Great Britain Executive in the matter. Both parties issued separate statements after the conference broke up. The miners declared that they cannot, under any circumstances, allow their wages to be determined by people who have no experience or knowledge of the industry. If the owners refuse to recognise the Industrial Board it should be understood that they do so entirely at their own risk, as their action may be fraught with very grave consequences. The owners declared that the only practical method of solving the problem was to enter into a new agreement which would prescribe an independent authority who would have the right to arbitrate upon questions referred to it. They point out that the miners could hope to obtain acceptable terms only as they do not enter on a disastrous strike.

In the meantime, the price of house coal is gradually going up. Lancashire and Cheshire collieries have decided to advance the price of coal by 1s. 8d. per ton and as long as this Damocles' Sword of a threatened strike hangs over the country, the innocent householder has to bear the brunt of the inconvenience in the shape of an increased coal bill. When, one wonders, will sanity and good sense return to Britain's industrial sphere?

The decision of the Austin Motor Company to continue the handsome dividend of last year of 100 per cent. and to capitalise £450,000 of the company's reserve has the look of a more munificent act than a closer scrutiny reveals. The main features of their financial readjustment are the following:—

1. The distribution from reserve of three 5 sh. 'A' Ordinary Shares for each Ordinary Share now held; the new share will range *pari passu* with the existing Ordinary Shares. except that they will not carry any voting right.
2. A dividend of 25 per cent. and cash bonus of 75 per cent. on the Ordinary Shares.
3. The issue of 100,000 'A' Ordinary Shares at a price of 10sh. of which half are to be offered to the Directors and half to Senior Employees.

By the first arrangement the position of the Ordinary

Air Mail Week

Shareholder reverts to that of 1927, prior to reconstruction. It is also not surprising that the company should desire to capitalise a part of the reserve which in the last balance sheet stood at £650,000. But the manner of issue calls for some comment. It is not unusual to reward the directors of a company who have taken a more active interest in the affairs of the Company than other shareholders. But direct monetary remuneration would perhaps be more in keeping than the issue of further shares in the Company. What they deserve is a reward not a larger voice in the affairs of the company.

U. S. A.

THROES OF THE NEW DEAL

The "New Deal" is passing through a phase of uncertainty and hesitation that should shake the complacency and confidence of the staunchest adherents of Mr. Roosevelt. The Bond market has reflected the weakening faith of the public in the soundness of the Administration's financial policy and the partial success of the Government's conversion operations should warn the over-zealous henchmen of Mr. Roosevelt against the wisdom of a too precipitate and radical line of action. The long-dated U. S. Treasury Bonds have dropped nearly four points from their mid-summer heights and the 1947-52 issue now stands at four and a half points below the level reached in the first week of July. The Treasury's conversion offer totalled $1,724,748,500 and the response amounted to only $1,044,000,000.

It would be far from the truth to suggest that Government credit has collapsed ; but the situation certainly calls for circumspection and care on the part of the "New Deal'-ers." It is necessary to analyse the cause of this wavering of faith and to prevent it. A good deal of the success of the New Deal is dependent on the market backing up the fluctuations and fortunes of the N. R. A.

At the back of the market's hesitation and uncertainty is the apprehension that Roosevelt might effect a further attenuation of the dollar and that a severe dose of inflation was probably being contemplated. The events that led up to this apprehension were, by no means, negligible. First came the silver legislation and the fear that silver might enter into the scheme of inflation. Senator Thomas' inflationary group had an influx of strength and vigour from a contemplation of the coming double-barrelled inflation. Next in importance was the drought and the consequent impoverishment of the agrarian population. The drought accentuated the necessity, in the opinion of many, of increasing the volume of currency in the country. Then again, the radical element in the Administration was recently greatly strengthened by the democrat success in the Maine elections. The rapidly rising volume of Government debts was also an indication that the Treasury would perforce have to inflate. The total Government debt now stands at the enormous figure of $27,500,000,000, which is more than double the lowest total to which it was reduced after the War and much above the post-War peak of $26,597,000,000 reached in 1919.

The depression in the market is due also to a large extent to the uncertainty regarding the Government's banking policy. At the present moment, the banks' portfolio contains a large proportion of the Government securities and they would not only be unwilling to suffer losses by liquidating the bonds on a falling market, but would positively stand aside when it came to a question of further issues. The date of publication of Professor Jacob Viner's report on the question of the federal reserve system of banking is drawing near and it is an open secret that the banks are quietly mobilising to present a united front against any project that departs from the traditional system.

In the meantime, the prospect of an improvement in the strike situation are as remote as ever. The announcement by certain mill owners in the Southern States of their intention of reopening their mills with the assistance of the National Guards has, if anything, worsened the situation. Mr. Gorman, the strike leader, has openly warned the mills concerned that that way perdition lies. He has further added that unless a settlement of the strike is reached during this week, he will call out all the workers in the other branches of the textile industry. It is widely felt that the time is ripe for intervention by Mr. Roosevelt. However stout the opposition to the N. R. A. the faith in Mr. Roosevelt's magnetic personality does not seem to waver.

Attempts are also being made to improve the internal economy in other directions, the most conspicuous being the efforts now being made for the fusion of the American Railway Association and the Association of Railway Executives. The object of the new body will be to unify the policy of the railway industry and to intensify the industry's efforts to obtain legislative assistance.

The rumour is current that the Administration are contemplating the creation of a new post, namely, a Secretaryship of Transport. The official concerned will have regulatory powers for the whole transport industry. It is not possible at this date to corroborate this but it is believed to be one of many tentative proposals made by the Administration to assist the rail-roads and other transport industries. The prospect of the raliways obtaining unusually good coal freights for the rest of the year are bright as the recent Coal Code, prohibiting the grant of summer discounts, has, probably, kept the coal consumers and distributors from acquiring their stocks. Nevertheless, the past ten weeks' carloadings have been appreciably below last year's figures and there is no indication that August figures will reveal an improved position. In July 1934 the rail-road revenue was 6 per cent. lower than in July 1933 and the operating expenses 7 per cent. higher. The net operating income was 45.6 per cent. lower and on the Southern lines 74.5 per cent. lower. In view of these alarming statistics a revision of the entire rail-road policy of the Government is certainly called for.

The above review is probably more gloomy than the stalwarts of the N. R. A. Administration would be prepared to own up to. They would perhaps proudly point to the fact that the cash balance of the Treasury has reached the handsome figure of $2,100,000,000 and that the success or failure of re-financing operations could, after all, be a matter of small moment. There is further a distinct drop in the curve of Treasury expenditure and for the first three months of the current financial year, the excess of Treasury expenditure over revenue was only $459,42,000 on all accounts. Unless a frantic reversal in the Government's relief expenditure policy takes place in the winter, there is as yet not much chance of the situation getting out of hand. Nevertheless, it is very true that the "New Deal" is passing through a difficult phase.

FRANCE

THE NEW YEAR'S BUDGET

More details are now available as regards the Budget estimates for 1935. M. Germain Martin has just produced his figures in the hope that the Parliament may be disposed to place them on the Statute book before the end of the year. The revenue and expenditure are made to balance around 47,000 million francs, without undue recourse to a further sacrifice from the functionaries and pensioners. This is considered a very creditable achievement for the Government

Air Mail Week.

considering the position of the budget during the immediately preceding years. From 1930 to 1933, the total credits voted ranged from 53,500 million francs and 50,500 million francs. The net result of this heavy expenditure during this four-year period has been a huge deficit of 21,000 million francs. The gravity of the situation was aggravated by a progressive shrinkage in the revenues with the progress of the economic depression for in spite of fresh taxation the State was not able to collect more than 43,500 million francs in 1933, as against a total revenue of 51,000 million francs in 1930.

Another legacy of the depression year budget is the increase in the public debts which are the only means left for the State to meet the expenditure in the absence of revenue. The public debt in 1934 is estimated around 15,101 million francs representing an increase of 1,657 million francs over the figures for the previous year. Fortunately the burden borne by the Caisse d'Amortisement, in meeting the debt charges is so substantial—it amounts to not less than 4,000 million francs—that the strain on the national budget is relieved to a considerable extent.

The three main items in the expenditure side of the budget are those under National Defence, Debt Service and Pensions. These put together very nearly consume about 66 per cent. of the total receipts. The Army, Navy and the Air estimates are to be provisionally content with the sanction of a sum equivalent to what was allowed in the previous year *i.e.* 11,330 million francs as against a demand of 12,460 million francs. While curtailing the demand, the Government have reserved the right to consider the question of a supplementary grant, should the amount already provided prove inadequate. This may appear to be a tacit confession that ere long there may arise the necessity for strengthening the Defence activities. Already the forthcoming Saar Plebiscite has caused enough sensation in the French political circles and the latest Nazi activities in the Saarland have only increased the French fears about their good intentions. It is therefore pointed out that, though the budget is balanced for all apparent purposes, the recognition of the necessity for a reconsideration of the grants already voted, is taken to mean that the budget may still continue to present difficulties. But, at the same time, without being liable to the charge of undue optimism, it might be taken that the era of deficit budgets has ended. At any rate, even if a deficit begins to manifest itself as the year advances, such deficits should be very insignificant compared to the previous years and be within the means of the Treasury to grapple.

Compared with the figures in the pre-War years, due allowance being of course made for the devaluation of the franc in 1926, the expenditure for 1935 has more than doubled, primarily because the outlays on services of the debt and on the national defences have more than doubled themselves. At the same time it also shows that in 1913, the national defences were a much heavier item in the budget than the debt, whereas the real totals for 1935 show the debt to be a bigger item than the national defences. The trend of developments in the next few years may be expected to bring the relationship back to what it was before the war ; for on the one hand, there can be no doubt about the French determination to spare no expense or effort in the new race for armaments and on the other, it can scarcely be supposed that the natioanl credit will continue at its present abnormally low rating despite the enormous accumulation of idle funds in private hands and the creditable progress made in recent years towards the restoration of the budget equilibrium.

Barring the probability of an increased expenditure on the Defence Service, the 1935 budget estimates must be admitted to have succeeded in bringing considerable relief to the country after four years of agitation. For once at least there is no question of further sacrifice either in respect of extorting more from the taxpayers or paying less to the Army, employed by the State. The preamble to the budget closes after a modest confession that equillibrium will depend on economic recovery rather than on anything else. "After the fiscal reforms," says the *expose des motifs*, "after the repression of abuses and the contributions to which practically all classes of citizens have consented, we count on the maintenance of the equilibrium of future budget through a revival of economic life favoured by the fundamental reform of the State." While the truth of this statement canot be doubted, for any equilibrium of the budget must ultimately look to the economic revival, the heroic efforts made by the Government to tackle the problem need in no way be depreciated.

Speaking of trade revival, one cannot fail to notice the claim made by the devaluationists that the recovery will be much speedier than it is now if the Government would only allow itself to be swayed by a policy of devaluation in preference to the barren policy of deflation. The Government have once again affirmed their unambiguous faith in the present partities which it does not propose to disturb. There might have been and still may be, cases of discontent among the various sections of the populace. Unemployment may be higher than at the corresponding season in the previous year and 33 per cent. above the total of a year ago. The industrial production index within twelve months may have fallen from 12 points above the 1913 level to 3 below it. The bankruptcy index may have set up a new high level in August. On the Bourse the share index may tend to fall uninterruptedly marking new record low levels. Transport figures may be far from satisfactory. Farmers may complain more loudly than ever. Yet the faith of the Government is still strong in the efficacy of deflation. If the only reliable means of escape from the depression is continued gradual price reduction, which means continued suffering, then, the Government point out, they have already made a fair progress along this difficult road. They are sure that the limits of deflation have not yet been reached. Doubtless the retail prices have lagged behind the wholesale prices ; the attention of the deflationists will, therefore, have to be directed towards the amount of pressure that can be put on retail prices. The official view of the matter is that whatever the Government may or may not do, as long as it does avoid inflation —which it is determined to do prices will go on declining. It is pointed out that prices *are* falling. Perhaps the rate of fall may not be as precipitous as one may desire—but the authorities are bold enough to suggest that the depression should be allowed to work out its own cures in a country which has already once devaluated her currency, and dislikes to repeat the operation and which has enormous powers of resistence.

In tha realm of finance, the work of financial restoration begun by the Government in February is being continued. The Minister of Finance has, this week, announced the issue of a New Loan. It takes the form of a relatively short-dated Treasury Bonds since the holder is given the option of redemption at par in three years or at a premium of 3 per cent. and 8 per cent. in six and ten years respectively. Since the bonds which bear interest at the rate of 4½ per cent. are offered at 97.6 and thus yield over 5 per cent. there seems to be a good chance of the public responding to the loan favourably.

GERMANY

PROBLEM OF TRADE DEBTS

The problem of trade debts has assumed a grave importance in both German and foreign political and financial circles. The lukewarm support accorded to the Exchange Agreement by the English business com-

Air Mail Week

munity and the insistant propaganda carried on by the news agencies about the implications of the latest economic laws and regulations passed in Germany have served to create an atmosphere of an inevitable pessimism as regards the success of the arrangements for settlement of the debts. Simultaneously with the suspension of the payment of Reichsmarks into the special account by Reichsbank, has come the offer of the liquidation of overdue accounts by Germany and if this has been accepted by the British industrialists, at least one subject could have been deleted from the programme for future negotiations. But this was not to be. The English delegation, headed by Sir George Holden, that visited Berlin recently with regard to the settling of yarn debts had succeeded in arriving at an amicable understanding. Germany offered liquidation of the overdue accounts, amounting to £267,000 in twelve monthly instalments, the interest on overdue accounts to be calculated at the rate of 4 per cent. per annum frohm the day of signing the Agreement. If the export of stockings, and fabric gloves to the Empire should show an increase in value compared with the period January - to June 30, 1934, an additional payment of 20 per cent. of this surplus has been offered. If for any technical reasons it should be necessary for another period than the one mentioned to serve as a basis for comparison, this will not be objected to so long as the purpose of this concession is not unfavourably interfered with. The foreign exchange necessary for the payment of these instalments can only be created by future export business, and as the volume of remittances is dependent on seasonal trade, it may be that the necessary instalment may be smaller than the average quota: but this will not influence the final result in any way.

There is also a qualifying clause which probably has given cause for some concern to the British trading interests. It is of course too well-known that these instalment payments can only be made from current and future export business. And as it is not possible for the German manufacturers to hold the necessary exchanges in readiness, the Reichsbank has requested a period of six months before the instalments could be commenced. The deliveries of yarns should however be forthwith commenced—at any rate to the exten tto satisfy Germany's export requirements. As a guarantee for the payment of the raw materials during this six-month period, it is provided that the importers will deposit Reichsmarks on the due date, according to the sales terms, into a special account of the Reichsbank which will be opened in favour of English spinners.

The above terms have proved unacceptable to the Lancashire Cotton magnates who are reported to be amazed at the offer. The fundamental objection is said to be that the proposed arrangement will involve an increase in the amount of money outstanding in Germany—because of the immediate deliveries required. The guarantee given by the Reichsbank is also considered insufficient. It is thought that as long as the German customer stresses the fact that his ability is dependent upon the export trade, the position of the German debtors may not improve at all after six months in which case the increased credits afforded may also get frozen.

The rejection of this offer is causing some concern to the German financiers. From the point of view of Germany, the above is the best guarantee that she could possibly give. This rejection, in effect, means that there cannot be any resumption of trade relations between these countries as far as the cotton textile industry is concerned. The question of making herself self-sufficient in all branches of industries has therefore assumed a greater importance than before. The new decrees regulating imports, and the creation of the new Control Boards already announced, which will begin functioning on the 24th of this month, will enable the German Minister of Economics to consolidate the position. Already the agricultural industry is successfully making experiments by which the imports could be curtailed. In view of the deadlock in the textile negotiations, this branch of the industry is receiving special attention; it is now essential not only that the present consumption should be met by home production, but that new uses should also be found by technicians for articles requiring cotton and silk. The active support which these aspirations are given by the German Government is shown by a recent decision of Dr. Schacht that all public purchases of textiles have to obtain the approval of the Reichs Minister and that all woollen fabrics for public purposes must contain a certain amount of reclaimed wool or artificial spinning material. Among the artificial spinning materials that are being experimented upon is Vista Fabric. As the mass of technical problems of the production of vista fibre are largely solved, the degree of textile self-sufficiency to be achieved solely depends upon how far the German Government is willing to disregard the elementary economics ; for there will be required a good deal of technical alterations in the lay out etc., of the mills. A large part of the consequences of such steps by Germany will indirectly be attributed to the irreconcilable attitude of the British exporters. It is therefore of little avail to speculate on whether Germany will really be able to pay off the accumulated debts.

(*Continued from page* 839)

But that is not my idea at all. The two great dangers against which India has to guard at the present moment are (1) increasing unemployment and widespread insolvency arising from the terrible fall of prices of the last five years ; and (2) continuous set-back and prolonged economic decline caused by the competition of the silver-money using countries of the world. It would be the sheerest folly to imagine that higher Indian import duties or prohibition of imports could possibly benefit India in the long run. What India urgently needs is NOT less and less trade, but MORE AND MORE TRADE. This, I submit, could best be assured by re-opening the Indian Mints to the free coinage of silver in co-operation with other countries. The effects of such a reform would be, *by restoring the greater scope for the use of silver, to increase the world's esteem for, and world-value of, silver.* This would—

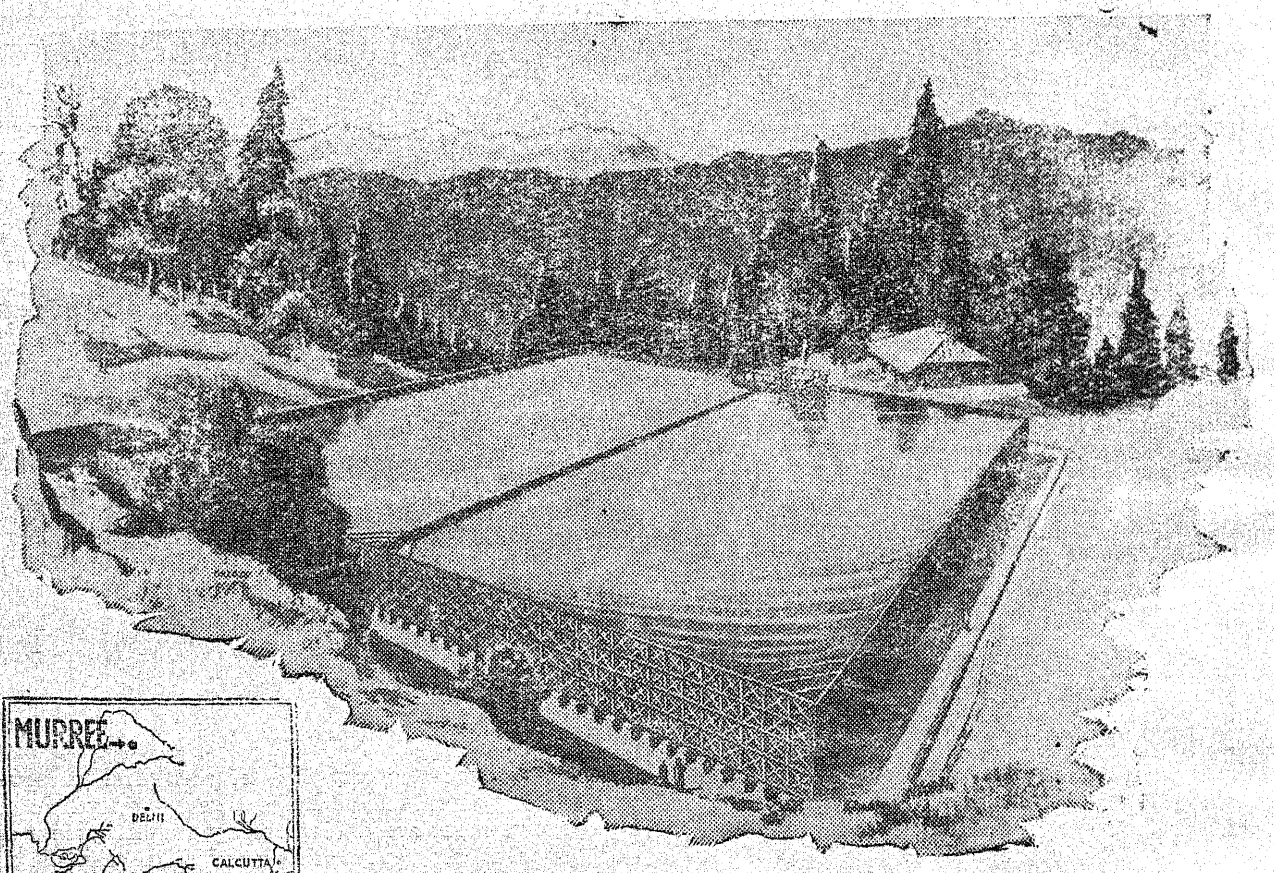
(1) increase employment and buying power among all those directly and indirectly concerned with silver production all over the world (including Burma) ;

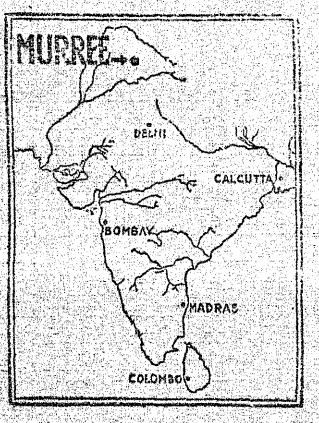
(2) increase the wealth and buying power of all in India who hold silver ornanaments and other reserves of silver (a mere act of justice) ;

(3) raise the general level of prices all over the world (as has happened several times before when additional supplies of metallic purchasing power have appeared), thus restoring profits to industry, creating confidence, and stimulating enterprise, to the great relief of the unemployment misery all over the world ;

(4) equip Indian producers and manufacturers to meet the daily increasingly severe competition of the EAST, because, obviously, as the world-value of silver rose, the artificial assistance and stimulus which the EAST at present unfairly receives, would disappear ; and India, Japan, China, and others would all compete on equal terms. Indian producers and industrialists could be relied upon to look after themselves in such circumstances, and with assured success.

In such circumstances, I can see no reason why the general level of prices should not return to 1928-29 levels, or why silver should not be restored to its last century level of say, sixty pence per ounce.





LARGEST PRESSED STEEL TANK IN THE WORLD

$3\frac{1}{2}$ MILLION GALLON RESERVOIR IN THE HIMALAYAS FOR MURREE

On a site so inaccessible that aerial-ropeway and bullocks provided the only possible forms of transport —where snow for a quarter of the year prevented all possible progress : under such conditions this immense steel tank was completed in under six months, a fitting commentary on the efficiency and resources of the Braithwaite organisation.

JUTE AND JUTE GOODS

JUTE

Calcutta, October 4, 1934.

Since reporting last week the raw jute market has ruled firmer and prices are on balance biger over the previous week. The highest and lowest quotations for December futures were Rs. 27 and Rs. 25-8 per bale, respectively.

A fair business was done by mills at rates annas 2 per md. over the previous week. Shippers, however, have most part remained out of the market, business being reported done in the middle of the week at Rs. 24-8. Sellers were fully reserved at the close.

There was heavy covering by a big speculator and bull buying on a large scale and this activity was responsible for the rise in price by a rupee and a half per bale in the course of two days. Imports into mofussil towns as well as in Calcutta are very heavy. They are believed to be larger than last year. Mills have purchased fairly large quantities for early to middle next year positions, but, holders are finding it difficult to dispose off spot goods. The latter are in good demand by balers who are able to hedge in futures at a good premium. Taking a longer view of the market the tone is very bullish but lesser so for near positions.

New crop firsts are quoting at Rs. 25-8 and Lightnings at Rs. 2-4. Business in Indian Jat LR was done at Rs. 4-6 and XLR at Rs. 3-10. European packing was quoted at annas two higher.

JUTE MANUFACTURES

Calcutta, October 4, 1934.

During the current week the hessian market has ruled fairly steady and nine porter is quoting annas 2 higher over the previous week. The highest and lowest rates for ready nine porter hessians were Rs. 8-10 and Rs. 8-7 respectively.

There has been little business from the overseas market throughout the week except some enquiry for heavy goods. The firmer tendency has been due to the reduction in local stocks and also in sympathy with raw jute. The stocks of hessians at the end of September was down by little over two crore yards as compared with the stock at the end of August. While the stock of heavy goods has been reduced by a crore and a half.

Ready nine porter is now quoting Rs. 8-11 while the eleven porter is quoting Rs. 11-2. Business in 7½ oz. was done at Rs. 8-10 October basis. Mid next year Heavy Cees were done at Rs. 24-8 and Sacks July-October, 1935, also at Rs. 24-8, Ready sacks are quoted Rs. 24-10 and B. Twills at Rs. 25-4. Mills have sold large quantities of heavy goods at these rates for forward positions.

Total reported sales for the week ending Saturday, the 29th September, 1934.

	This and next month. Yds.	Forward. Yds.
Hessians ...	34,54,411	1,72,27,013

COTTON AND COTTON GOODS

COTTON

Calcutta, October 4, 1934.

Dull conditions have prevailed in the cotton market throughout the week and daily fluctuations are confined to very small limits. The highest and lowest quotations for April/May Broach were Rs. 212 and Rs. 207. The weakness of the market was due to heavy liquidation in New York markets, following heavy hedge sales and absence of fresh stimulus. Locally the stocks are heavy and prospects of new crop quite good. Purchases at declines are however advisable.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £191,821,508 on the 12th inst. as compared with £191,762,212 on the previous Wednesday.

In the open market about £1,800,000 of bar gold was disposed of during the week. The demand was again general and sufficient to maintain prices at a premium over the gold exchange parities.

SILVER.

Calcutta, October 4, 1934.

On account of fresh buying of silver by the U.S.A. Treasury, the price of silver in London has gone up to 22⅝d. and that in New York at 50 cents. India has been buying on London Exchange while China has sold. Local price has gone up to Rs. 62 for the first and Rs. 62-3 for next settlement. Stocks in Bombay and Calcutta are almost unchanged at 9,500 and 3,000 bars while the daily offtake is moderately fair. The tone of the market is steady.

London—Air Mail Week.

The market has been very steady during the past week and prices have shown little variation. There have been no new features, America and the Indian Bazaars continuing to give support, the demand again being met chiefly by China sales; the latter have perhaps been made rather less freely, offerings in many cases being limited to prices slightly above those current. There has been some enquiry from speculators but sales to liquidate bull contracts have also been effected. The tone of the market remains steady.

TEA

Calcutta, October 4, 1934.

Sale No. 17 was held on the 1st and 2nd October, 1934, when 14,866 packages of tea with export rights and 9,398 packages of leaf and 5,357 packages of dust for internal consumption were sold at average prices of 0-8-11, 0-5-0 and 0-5-6 per lb.

The quality was of the average standard for the time of the year. There was an advance in the prices realised in all grades especially in the Broken grades. The quantity sold however declined perceptibly and the quantity on offer for the internal grades was very poor.

The following are particulars of Sale No. 17.

Teas with Export Rights.	1934	1933
Offered	14,866	26,252
Sold	14,866	25,550
Average	0-8-11	0-9-2

Teas for Internal Consumption.

SUGAR

Calcutta, October 4, 1934.

The conditions of the sugar market was very depressing during the week. In the Java market there was practically no demand either locally or from mofussil dealers. A general tendency in the market was to sell off stocks at reduced prices but even this failed to attract buyers. Certain importers who made speculative buying in the past are now faced with taking up parcels at a much higher rate than the day's quotations. Importers are taking no interest they would rather wait and watch the general conditions of the market.

In the Indian sugar market conditions are depressing due to heavy arrivals of Java goods. Activities in the local market are unlikely until conditions get more settled.

Stock of sugar in Calcutta is estimated at about 14,000 bags approximately.

MISCELLANEOUS

WHEAT

Calcutta, October 4, 1934.

Early in the week steadier conditions prevailed in the wheat market but the close is rather easy. The highest and lowest rates for May Beta were Rs. 3-2-9 and Rs. 3-1-6 per md. The fall at the close was due to weaker American advices following heavy liquidation on the Winnipeg exchange. It is however desirable to purchase wheat round-about Rs. 3. Ready wheat is quoting Rs. 2-15 and May Beta Rs. 3-1-6.

Quotations:—

May	$0.99⅛

LINSEED

Calcutta, October 4, 1934.

The market has ruled lifeless throughout the week. The highest and lowest quotations for May Beta were Rs. 4-7 and Rs. 4-5-6 per md. Anticipating a heavy new crop buying interest for forward positions is conspicuous by its absence, while the sellers are not keen to sell ready goods, the stocks of the latter being small. The general tone of the market is quiet but steady.

INDIAN CUSTOMS REVENUE.

According to returns received in the Department of Commercial Intelligence and Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revenue) collected during the month of August, 1934, amounted to Rs. 424 lakhs as against Rs. 3,87 lakhs in the preceding month and Rs. 4,07 lakhs in August, 1933. The total revenue realised in the five months ended August, 1934, was Rs. 20,20 lakhs as compared with Rs. 19,84 lakhs during the same period last year. Import duties accounted for Rs. 14,78 lakhs of this amount, export duties for Rs. 1,60 lakhs, excise duties on motor spirit, kerosene, sugar and matches for Rs. 2,14 lakhs, Rs. 1,12 lakhs, Rs. 13 lakhs and Rs. 17 lakhs respectively and Land Customs and Miscellaneous for Rs. 26 lakhs. Increases were noticeable under import duties on kerosene, motor cars, artificial silk yarn and thread, metals other than iron and steel, etc., iron and steel, dyes derived from coal tar, cotton hosiery, pneumatic rubber tyres and tubes, tobacco, oils, batching, fuel and lubricating, railway plant and rolling stock and wireless reception instruments and apparatus; export duties on jute, raw, and manufactured and excise duty on motor spirit also showed increases. On the other hand, import duties on sugar, cotton fabrics, silk fabrics, cotton yarn and thread, motor spirit, betelnuts, machinery, toys, games and sports goods, liquors, paper and stationery, boots and shoes, tea and wood pulp, the export duty on rice, the excise duty on kerosene and land customs receipts showed noticeable decreases.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Friday.

The stock exchange opened with a cheerful tone and active conditions prevailed throughout the session. Government Securities remained very steady although the fluctuations were narrow. Jute Mills shares also were steady in sympathy with better commodity prices. Cottons attracted rather more attention while increased activity prevailed in coal shares towards the close. Among Miscellaneous Industrials, sugar shares were definitely better. Electrics, Engineering and Flour mills shares also attracted considerable attention. A distinctly better tone was in evidence in tea shares and a very good business was put through at advancing rates.

Government Securities.—Although the volume of trade in this section was smaller than usual, prices kept fairly steady in the majority of instances owing to easy money conditions and on account of the firmness in India Government Sterling Securities in London. 3½ per cent. Government Paper fluctuated within narrow limits the highest point reached being Rs. 91-15 and lowest being Rs. 91-10. At the time of writing the rate is round about Rs. 91-14. Among the terminable loans, 3½ per cent. 1947/50 came to business at Rs. 101-7 and 4 per cent. 1960/70 at Rs. 107-11. Trading was very much restricted in Medium-dated Loans and at the time of writing sellers predominated at ruling rates.

Provincial loans were, however, well supported.

The Bank rate remained unchanged at 3½ per cent.

Fixed Interest Bearing Securities.—The demand for Jute Mills and sound Industries Preferences continued unabated and in the majority of instances rates appreciated further.

Among Jute mills issues, Anglo-India changed hands at Rs. 146-8, Bally at Rs. 131, Birla at Rs. 112-8, Cheviot at Rs. 141, Lansdownes at Rs. 126, Lothian at Rs. 141, New Centrals at Rs. 144 and Union at the same figure. Among Cotton mill Preferences business was reported in Bengal Nagpur at Rs. 136, Bowreah (A Pref.) at Rs. 190, Dunbar at Rs. 173 and Kesoram at Rs. 133-8.

Among Coal Preference Shares, Burrakur 7 per cent. Preference recorded a deal at Rs. 124 and Khas Kajora was marked at Rs. 11-6. Among Industrial Preferences, business was reported in Bengal Telephone 7 per cent. Preference at Rs. 15; Burn & Co. 6 per cent Preference were dealt in at Rs. 113 and 7 per cent. issues at Rs. 131-8. Tata Iron and Steel 2nd Preference was marked up further to Rs. 174. There are buyers for Indian Standard Wagon Preferences at Rs. 123 but no business was reported up to the time of writing. Associated Hotels 7 per cent. Preference was dealt in at Rs. 101 ex-dividend Spencer 'A' Preference was mentioned at Rs. 10 and 'B' Preference at Rs. 11-12; Cawnpore Sugar 8 per cent. Preference was marked up further to Rs. 156.

Only a very small business was reported in Debentures. 6 per cent. 1916/56 Associated Hotels Debentures changed hands at Rs. 101 and 5½ per cent. 1956/86 Calcutta Port Trust accounted for a deal at Rs. 120-2.

Other Investment Stocks.—Last week's feverish activity for Imperial Bank's shares has not been maintained and profit taking was distinctly in evidence. Prices receded to Rs. 1,545 from Rs. 1,580 for the fully-paid-up issues and Rs. 390 from Rs. 402 for the Contributories. Central Bank's shares are now quoted at Rs. 33-10.

Comparatively small business was reported in Railway shares. Arrah-Sasaram are now quoted at Rs. 56 and Darjeeling Himalayan (ordy.) at Rs. 63. Sara Serajgunge was wanted and business was reported at Rs. 94-8; Shahdera (Delhi) Saharanpur was marked at Rs. 134 while Hoshiarpur Doab had sellers at Rs. 93-8.

Government Guaranteed shares were however in usual demand but there was no scrip available.

Cottons.—There was more buying in cotton shares during the week under review than has been the case recently and in several instances enquiry has broadened. Bengal Nagpur were not available below Rs. 19. Bowreah Ordinary was marked at Rs. 289-8, Dunbar Ordinary changed hands at Rs. 132; New Ring at Rs. 78; Kesoram (ordy.) kept steady at Rs. 4-4 while Mohini advanced further to Rs. 10-10.

Coals.—Coal section opened quiet but steady; but as the session progressed more buying power developed and rates advanced sharply for many shares in view of a press report indicating that the Government of India's decision regarding the Coal Restrictions Scheme is imminent. A general optmistic feeling prevaled although a slight profit taking was apparent, from time to time. Amalgamated was very steady round about Rs. 20-8; Bengal was marked upto Rs. 264; Bokaro & Ramghur to Rs. 9-4; Burrakur (ordy.) to Rs. 14-12 East Indian to Rs. 20; Equitable (ordy.) met with a very strong demand and a large line of business passed in them round about Rs. 27. A further substantial rise is expected in them within a short time. Hurriladih kept fairly steady at Rs. 10-12. Nazira at Rs. 9-4, New Bheerbum (ordy.) advanced to Rs. 14-4 and New Manbhum to Rs. 45-4. Rewa kept very firm at Rs. 12 and Sendra at the same figure.

Among lower priced stocks, Bhalgora Burradhemo, Churulia, Mundulpore, Minto, Samla and Talcher were very popular, expecially the last named which changed hands fairly freely upto Rs. 2-4.

Jutes.—Jute Mills shares remained fairly steady, on the whole, but the volume of trade was comparatively smaller than usual. Commodity prices ruled steady. 9 Porter Hessians at one time touched Rs. 8-9 and raw jute to Rs. 27-2, but at the time of writing both were again quoted below the best. Howrahs opened at Rs. 54-8 on Monday and fluctuated within narrow limits the highest point touched during the week was Rs. 54-13 on Thursday morning when a reaction followed and the rate gradually receded to Rs. 54-8 at the time of writing. Kamarhatty fell away to Rs. 535 from a quotation of Rs. 540. Clives are now quoted at Rs. 31-12. Hukumchands at Rs. 14-8 and Nationals at Rs. 23-14. Nuddea, however, continued firm and are now quoted at Rs. 45-12. Reliances changed hands at Rs. 75-8. Presidencies were dealt in at Rs. 5-8. Northbrooks at Rs. 46 and Birla at Rs. 13.

Among higher priced stocks, business was mainly confined to small lots and there was no outstanding feature. Anglo India was marked at Rs. 398; Balley at Rs. 185; Barnagore at Rs. 154; Budge Budge at Rs. 326; Fort William at Rs. 281; Kelvin at Rs. 538; New Central at Rs. 365; Orient at Rs. 205 and Standard at Rs. 325.

Electricals.—A fair business was reported in Electric Supply Companies shares at firm rates and buyers predominated in more popular issues. There are buyers for Benares at Rs. 14; Dacca at Rs. 20; Patna at Rs. 16-8; Upper Ganges at Rs. 12-10 and Upper Jumna Valley at Rs. 10-12; Bareilly changed hands at Rs. 13; Jubbolpores at Rs. 13-4; Muttra at Rs. 9-8 and United Provinces at Rs. 163-8. Cuttack, Mirzapore and Shahjahanpore, however, were on offer without attracting buyers.

Engineering.—Engineering companies shares met with a good enquiry and a fairly large business was reported in improving rates. Arthur Butler advanced sharply to Rs. 13-4 from a quotation of Rs. 11-4. Bengal Iron kept steady at Rs. 3-12 and Britannia Building and Iron at Rs. 4; Burn & Co. (ordy.) advanced to Rs. 267 but at the time of writing they are slightly easier at Rs. 264. Indian Iron and Steel were marked up sharply to Rs. 6-12 following strong enquiry while Saran Engineering were taken up to Rs. 7-8. Indian Galvanizing kept steady at Rs. 8-8 and Kumardhubi Engineering (ordy.) at Rs. 3-4. Marshalls recorded a few deals round about Rs. 1-4 and Thorny Croft changed hands at As. 6.

Sugars.—Sugar shares have attracted a good deal of attention and confidence has again been restored. Balaram-

pur have taken off the market at Rs. 18 ex-dividend. Carew & Co. improved to Rs. 35; Champaran to Rs. 23-2; New Savan changed hands at Rs. 14-2; Ryam advanced to Rs. 37 and Samastipore to Rs. 11-12; Murree Brewary was mentioned at Rs. 197; Basti changed hands at Rs. 260; Bharat at Rs. 7-6 and South Behar at Rs. 11; Raza and Punjab Sugar were enquired for, but no business was reported owing to absence of sellers.

Miscellaneous.—A good general business was reported in this section. British India Corporation (ordy.) after having dealt in up to Rs. 2-10 are now slightly easier at Rs. 2-6 sellers. Defds. are, however, steady at Rs. 1-8. Bararee Coke were marked up to Rs. 10-2 from a quotation of Rs. 9-8. Firpos kept steady at Rs. 11-12; Great Eastern Hotels at Rs. 77; and Spence's Totel at Rs. 1-7. Britannia Biscuit advanced to Rs. 7-2 from a quotation of Rs. 6 while Burma Corporation was easier at Rs. 8-8 on London advices. Calcutta Tramways (ordy.) marked up to Rs. 35-8. Tavoy Tin recorded a deal at Rs. 3-8 and Walford Transport at Rs. 1-2.

British Ceylon Corporation (ordy.) improved to Rs. 9-12, Howrah Oil kept steady at Rs. 8-12 and Tide Water Oil at Rs. 8-14. Flour Mills shares were in fair demand and Bengal Flour advanced to Rs. 133 and Hooghly Flour to Rs. 15-10. Bengal Paper Ordinary kept steady at Rs. 97; Midnapore Zemindary (ordy.) at Rs. 71.

Calcutta Landing and Shipping recorded a deal at Rs. 12 while India General Navigation and Railways (ordy.) kept steady at Rs. 108 and Port Shipping at Rs. 14-8. Bengal Potteries recorded a deal at Rs. 4-8, Bengal Aerating Gas kept steady at Rs. 75. Bengal Chemical (ordy.) at Rs. 314 and Frank Ross at Rs. 3-12.

Rubbers.—Dull conditions have obtained in Rubber shares and only a limited business was put through at easier rates.

Teas.—The improvement which was in evidence in this section during the previous week has been fully maintained. This week's local tea sale was again satisfactory and improved rates were realised. London advices were also firm. A fair business was reported in Tea shares in the local stock exchange at advancing rates but buying was of a rather selective nature.

Bishunath advanced to Rs. 33-12; Hazimara to Rs. 46; Hattikira to Rs. 29; Joybirpara to Rs. 23 and Sonai River to Rs. 26.

Batele kept steady at Rs. 6-6; Dufflaghur at Rs. 15-8; East Indian at Rs. 14-8; Eastern Cachar at Rs. 12-4; Hasqua at Rs. 11-4; Naga Hills at Rs. 23-10; Ruteema at Rs. 13-4; Sarugaon at Rs. 12-4; Teen Ali at Rs. 18-12; Tengpani at Rs. 18-4 and Tezpore at Rs. 12-2.

BOMBAY STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Bombay, Thursday Evening.

Money Market.—Money was easy with inter-bank call at 1 per cent. and business was occassionally done between 1¼ and 1½ per cent.

Exchange Market.—The market ruled steady with Banks selling T. T. at 1s. 6 3/64d. up to December; 1s. 6 1/32d. January/February 1935 and 1s. 6d. for March/June. Banks are buying 3 months bills at 1s. 6 5/32d. for October/December.

Paper Market.—The market opened quietly steady with 3 per cent. Government Paper at Rs. 91-13. Even though the operators seem to have transferred their attention partly towards the shares, *we feel, in view of the continued bullish advices from London Giltedged market, 3½ per cent. Rupee paper should appreciate further in the near future.* There seems to be good enquiry for 1960/70 at Rs. 107-15 with few scrips for offer. 3 per cent. 1941 quoted at 7 annas premium. 1947/50 closed at Rs. 101-6, 1943 at Rs. 105-8; 1955/60 at Rs. 112-2; 1935 at Rs. 102-9; 1939/44 at Rs. 108-6; 1940/43 at Rs. 109-6; 1938/40 at Rs. 109-6; 1945/55 at Rs. 117-9; Bombay Development at Rs. 104-11; 6½ per cent. 1935 Treasury Bonds at Rs. 103-11.

Shares.—Throughout the week under review, the share market has been very active, particularly in Mill and Steel sections. Special feature at the close of the week was frenzied buying in steels, specially for Ordinaries and Deferreds which reached record levels.

Textiles.—This section has come into favour with the operators; and there has been good deal of activity with most of the popular scrips showing improvement over last week's quotations. But for the weaker cotton advices from America, prices would have been higher this week. *We, however, feel that scrips like Bombay Dyeings, Central Indias, Centuries, Swadeshis etc., are good for lock-up.* It is a healthy sign that scrips like Lakshmis, Morarjees, Sholapores and Vishnus are finding good enquiry from investors. Lakshmis improved to Rs. 826-12; Morarjees to Rs. 1,530; Sholapurs to Rs. 2,820 and Vishnus to Rs. 1,500. Bombay Dyeings moved up from Rs. 850 to Rs. 883-2 and closed at Rs. 878-12. Central Indias which were done as high as Rs. 306-4 are now quoted at Rs. 295. Centuries closed at Rs. 300; Colaba at Rs. 133-12; Gokak at Rs. 172-8; Indian Bleaching at Rs. 152-6; Indore Malwa at Rs. 121-4; Kohinoors at Rs. 195; New Great Eastern at Rs. 160; Simplex at Rs. 93-12; Swadeshis at Rs. 233-12.

Hydro Electrics.—This group was very active; and all the three scrips moved up. The rise in Tata Powers is due more to bear covering. Powers closed at Rs. 1,257-8, ex-coupon. Hydros moved further up to Rs. 161 on good enquiry and Andhras closed at Rs. 1,557-8.

Iron and Steel.—Steels, which were no doubt active in the beginning of the week, suddenly rose to high levels on frenzied buying; and Deferreds were done as high as Rs. 416-4 and Ordinaries at Rs. 96, though they closed at Rs. 397-8 and Rs. 93-6 owing to hectic selling. Owing to heavy liquidation by a prominent party, the 2nd Preferences, which were done at a higher price of Rs. 176, now closed at Rs. 173.

SAUGOR ELECTRICITY SUPPLY CO., LTD.

NOTICE

is hereby given that the Sixth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 19th October, 1934, at 3-10 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th June, 1934, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 6th to the 19th October, 1934, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta, the 5th October, 1934.

BENGAL TELEPHONE CORPORATION, LIMITED.

NOTICE.

The Twelfth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 8, Hare Street, Calcutta, at 3-30 p.m., on Monday, the 29th October, 1934, to receive the Directors' Report, pass the Audited Accounts for the year ending 30th June, 1934, declare a dividend, and transact any other business that may be brought before the Meeting.

The Share Transfer Books of the Company will be closed from the 15th to the 29th October, both days inclusive, and Warrants for such dividend, as may be declared, will be issued on application to those Ordinary Shareholders whose names stand in the Register Books of the Company on the 29th October, 1934.

By Order of the Board,
F. ROONEY,
Secretary.

8, Hare Street,
Calcutta, 25th September, 1934.

Cements.—This section, which was practically neglected for the last few weeks, came into lime light. Bundis have risen to Rs. 34-14. Indian Cements had substantial rise and closed at Rs. 475-10; Shahabads rose higher by 15 points and closed at Rs. 365; Gwaliors were up at Rs. 107-8. Uniteds were neglected at Rs. 83. Punjabs were better at Rs. 24-4; Katni Deferreds and Ordinaries at Rs. 1,165 and Rs. 333-2.

Miscellaneous.—British Burma Petrols are being quietly picked up and have risen to Rs. 4-6. Belapurs, which were quiet around Rs. 220, are now in demand at Rs. 241-4. It is reported that this company has made a profit of over Rs. 15 lacs, and the market expects Rs. 12 dividend. Bombay Burmas, though active in the beginning of the week, closed lower at Rs. 458-12 for old share and Rs. 148-12 for new shares. Telephones came into prominence with buyers at Rs. 114. Trams were higher at Rs. 181-14. Tata Constructions which were quiet around Rs. 79, firmed up to Rs. 80-12. Indian Radio Deferreds and Ordinaries were steady at the previous levels.

Banks & Insurances.—On heavy selling from Calcutta, Imperial Bank fully paids and partly paids which were around Rs. 1,562 and Rs. 397, closed lower at Rs. 1,545 and Rs. 388-12. Barodas closed at Rs. 103-8; Centrals at Rs. 33-6; Bank of Indias at 120 and Unions at Rs. 5-1-6.

In the insurance section, Orientals moved further up to Rs. 3,900; New Indias closed at Rs. 37-2; Vulcans at Rs. 8-4.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)
Madras, October 4.

Government Securities.—The securities market was dull during the period under review with little business passing in Paper. Much business passed in 4 per cent. 1960-70 loan around Rs. 107-11 whilst 3½ per cent. 1947-50 loan was extremely steady at Rs. 101-8. Business in the new 3 per cent. 1941 loan transpired at annas 7 premium. The enquiry for medium-dated loans was poor with little business passing; the other State loans continued firm with all Mysore Loans showing fractional advances with sellers scarce.

Fixed Interest Securities.—Among joint stock company debentures Nilgiri Neerugundi Estates came to business at Rs. 101, whilst Cochin Malabar Estates debentures were wanted at Rs. 103. The Preference share market continued active. There were many buyers for Deccan Sugar and Abkhari at Rs. 125, whilst Tata Iron and Steel second preferences were active closing at Rs. 174 cum. dividend. *These look like moving up further.*

Banks.—Bank shares were easier, especially Imperial fully-paids which fell from Rs. 1,567½ to Rs. 1,545 and the Contributories lost about twelve points. No business passed in the Bank of India and Central Banks; but Mysore Banks were keenly enquired up to Rs. 235. Indian Banks (big) changed hands at Rs. 119 and the (small) at Rs. 22½ but closed steady.

Electric Telephones and Electrics.—Rangoon telephones were done at Rs. 13-4 whilst Vellore electrics improved to Rs. 12-12 and a large business was done in Tata Powers which after rising to Rs. 1,270 closed quieter at Rs. 1,250.

Mills.—Mills were firm. Buckinghams put on six points closing at Rs. 206; Gokaks also rose on Bombay support, elsewhere the business completed was little in the absence of sellers.

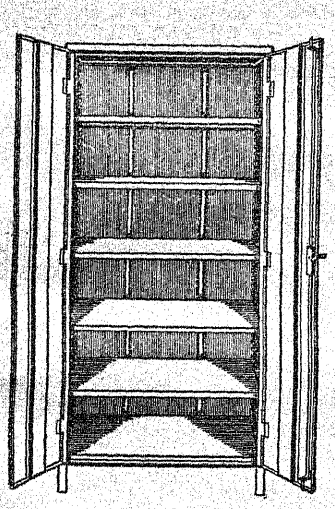
Cement.—The Cement market was active and justified our optimism. Indian cements rose to Rs. 480 whilst the other cement shares put on a few points. *Indian and Bundi cements will rise further as also Punjabs.* A good business was done in this section. Coimbatore cements were quoted around Rs. 160.

Sugars.—This section met with better enquiry though deals were limited. Indian sugars and Refineries limited, ordinary, improved further to 8 annas premium; *and they are likely to go higher.* Mysore Sugars were slightly easier on rumours of lower dividend; Belapurs improved to Rs. 240 though the closing was quiet.

Rubber.—The rubber market was dull except for isolated deals in Cochin Malabar Estates ordinary around Rs. 2-7.

Tea.—The tea share market also was quiet with some business passing in Devasholas at Rs. 8.

Miscellaneous.—The miscellaneous section was again active in Tata Iron & Steel ordinary and deferred which saw fresh high levels. *These shares look like improving further as the bullish sentiment continues.*



GODREJ & BOYCE

MANUFACTURING COMPANY, LIMITED

Contractors to the Govt. of India, Indian Stores Dept.

NEW YORK STOCK EXCHANGE

Thursday Morning.

The Stock exchange market ruled quiet and featureless though at the close a shade higher. United States Steel Corporation are working 22 per cent. of capacity during the week. Cerro de Pasco have declared their quarterly dividend of half dollar. Cerro de Pasco, is the second largest producer of Silver in the western hemisphere and silver prices are moving up. *We hope to see higher levels for this scrip which is attractive at the present price of 37 dollars.*

LONDON STOCK EXCHANGE

The gild-edged market continued firm during the week under review. Though the week had not been noted for much activity there was a distinct improvement in the undertone of the prices of Indian Loans and Home Funds. A slight advance was recorded in Indian Loans and Home Funds on Wednesday. On Thursday also there was an improvement in Indian Loan but Home Funds suffered a decline. Among other sections Tobacco and oils changed hands at higher prices early in the week but later on declined. Home Rails were steady. The week has not been good for rubber and most of the shares were quoted lower.

is hereby given that the Thirteenth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 19th October, 1934, at 3-0 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th June, 1934, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 6th to the 19th October, 1934, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta, the 5th October, 1934.

COMPANY REPORTS

CHURULIA COAL CO., LTD.

Report for the half-year ended June 30, 1934.

The Directors beg to submit the Audited Accounts for the half-year ended June 30, 1934, which show a balance at the credit of profit and loss account of Rs. 5,839-0-11 after allowing Rs. 1,771-14-0 for Depreciation. The Directors propose to dispose of this as follows:

	Rs.	A.	P.
In paying a dividend of 6¼ per cent. per annum, free of Income-Tax ...	4,687	8	0
In carrying forward	1,151	8	11
Total ...	5,839	0	11

Raisings and Despatches.—13,707 tons were raised and 14,237 tons were despatched.

Coal Restriction Scheme.—This scheme is still before the Government of India and their decision, it is hoped, will be issued shortly.

Market.—There is no improvement in the coal market.

E. C. Benthall, D. H. Wilmer, J. R. Coulthard—Directors.

F. W. Heilgers—Managing Agents.

Comparative statement of balance sheets for the last three consecutive half-years:—

CAREW AND CO., LTD.

Report for fifteen months ended June 30, 1934.

The Directors beg to submit the Audited Accounts of the Company for the fifteen months ended June 30, 1934:

	Rs.	A.	P.
Resulting in a working profit of ...	5,21,049	2	2
To this has to be added the amount at credit brought forward from last account ...	18,380	4	10
	5,39,429	7	0
Deduct for Depreciation	98,027	12	6
Making a total of ...	4,41,401	10	6

which the Directors propose to deal with as follows:

To payment of a Dividend at Rs. 1-8 per share	2,40,000	0 0
,, Income-Tax and Super-Tax Reserve ...	1,10,000	0 0
,, General Reserve	50,000	0 0
,, Reserve against outstandings ...	5,000	0 0
,, Carry forward to next account ...	36,401	10 0
Total ...	4,41,401	10 6

The Directors beg to report that sales of potable and commercial spirits show satisfactory increase during the period under review. Sales of our Rosa Rums in particular show a very satisfactory increase. During the period we put on the market Carew's Dry Gin, and this spirit has had a very good reception from the consuming public which can only be put down to the excellence of the production.

As forecasted in our last report, lower prices were realised for sugar. The question of the marketing of sugar is presently under consideration by the Industry, and we hope that the fall in prices may in some measure be arrested.

The Company's sugar factory worked very satisfactorily and the percentage yield in sugar from cane was maintained. The cane crop is doing well and the factory anticipates ample supplies for next season if conditions continue favourable.

K. J. Nicolson, K. L. Jatia, T. S. Gladstone—Directors.
Lyall Marshall & Sons—Managing Agents.

Comparative statement of balance sheets for the last three consecutive half-years:—

BURRAKUR COAL CO., LTD.

Report for the half-year ended June 30, 1934.

Raisings for the period under review were 326,941 tons compared with 342,555 tons for the corresponding period of last year.

Despatches were 364,432 tons against 361,223 tons for the corresponding period of last year.

Coke Plant.—48,697 tons were manufactured as against 49,229 tons last year.

Market.—The depression in the coal market continues and during the half-year the tendency was towards still lower prices.

Coal Restriction Scheme.—This scheme is still before the Government of India and their decision, it is hoped, will be issued shortly.

Accounts.—The profit and loss account after transferring Rs. 50,000 from Dividend Equalisation Reserve and providing Rs. 1,02,041-15-6 for Depreciation and including Rs. 56,709-10-6 brought forward from last half-year, shows an available balance of Rs. 1,56,249-13-3 which the Directors propose to dispose of as follows:

	Rs.	A.	P.
To pay a dividend at the rate of 7 per cent. per annum free of Income-Tax on 22,998 Preference Shares at Rs. 100 each issued at June 30, 1934	80,493	0	0
In paying a dividend of annas 2 per share, free of Income-Tax on 454,624 ordinary shares issued as at June 30, 1934 ...	56,828	0	0
In carrying forward	18,928	13	3

MONTHLY REVIEW OF TRADE AND FINANCE

Vol. No. XIV. OCTOBER, 1934.

October has earned the unenviable distinction of being the first month for the last two years with an adverse balance of trade in merchandise. The total exports during the month amounted to 12.37 crores of which 30 lakhs are accounted for by re-exports; and with imports at 12.48 crores India's trade during the month has ended with an adverse balance of 11 lakhs. This raises issues of far reaching significance which cannot be fully entered into within the scope of this review. But it may be emphasised here that the emergence of an adverse trade balance for the first time since August 1932, lends poignant significance to our remarks in these columns in the last two issues of the Monthly Trade Supplement in regard to the tendency of imports to increase. It is interesting in this context to examine the experiences of India in the years of the depression. Throughout the whole of 1931-32 there was hardly any month, which was without a substantial excess of exports over imports. Though this year may be considered to be the worst period of the depression, it was also the period in which the heavy surcharges on import duty might be expected to weigh heavily on imports trade. And such a result was natural. But the period between April to August was a period of adverse trade balances and thereafter up to September last, India did not experience an adverse trade balance in any month. If it should prove that we are in for another period of excess of imports over exports, there will surely be a number of difficult problems for the Government to solve and the national economy will also be beset with many difficulties. It is an appreciation of such an eventuality that spurred us nearly four months ago to utter a note of warning about the tendency of imports to increase, when exports are not feeling a like stimulus.

STATISTICAL DATA FOR OCTOBER, 1934.

*Weekly average returns.

As compared with the preceding month October showed increases in the values of imports, exports and re-exports. The value of imports of private merchandise totalled Rs. 12,48 lakhs, an increase of Rs. 1,93 lakhs as compared with the preceding month. The exports of Indian produce and manufactures rose by Rs. 22 lakhs from Rs. 11,85 lakhs in September, 1934 to Rs. 12,07 lakhs in the month under report. Re-exports also recorded an improvement of Rs. 8 lakhs and amounted to Rs. 30 lakhs.

Treasure on private account, including currency notes, showed a net export of Rs. 4,21 lakhs in October, 1934, as against Rs. 96 lakhs in the preceding month and Rs. 3,29 lakhs in October, 1933.

Measured by the statistics of merchandise and treasure the total visible balance of trade in October, 1934, was Rs. 4,15 lakhs in favour of India as compared with Rs. 2,54 lakhs in September, 1934 and Rs. 5,61 lakhs in October, 1933. During the seven months ending October, 1934, the visible balance of trade in merchandise and treasure was Rs. 41,57 lakhs in favour of India compared with Rs. 50,75 lakhs in the corresponding period of the preceding year. The balance of remittances of funds in October, 1934, was *minus* Rs. 3,69 lakhs and in the seven months ending October, 1934, *minus* Rs. 25,17 lakhs.

As compared with October, 1933, the imports of food, drink and tobacco in October, 1934 increased by Rs. 48 lakhs to Rs. 1,62 lakhs; imports of raw materials fell by Rs. 26 lakhs to Rs. 1,20 lakhs while those of manufactured articles rose by Rs. 1,61 lakhs to Rs. 9,40 lakhs. Under food, drink and tobacco, imports of sugar 16 D. S. and above (including beet) rose from 21,000 tons to 27,000 tons and in value from Rs. 22 lakhs to Rs. 26 lakhs. Arrivals of raw tobacco increased from 207,000 lbs. valued at Rs. 2 lakhs to 595,000 lbs. valued at Rs. 7 lakhs. Imports of rice, not in the husk recorded an increase having amounted to 40,000 tons (Rs. 27 lakhs) as compared with 7,000 tons (Rs. 4 lakhs) in October, 1933. Under raw materials, the imports of kerosene oil declined by 4,625,000 gallons to 5,095,000 gallons in quantity and by Rs. 24 lakhs to Rs. 16 lakhs in value. Imports of mineral oils other than kerosene fell to 10.6 million gallons valued at Rs. 28 lakhs, which meant a decline of 3.4 million gallons in quantity and of Rs. 7 lakhs in value. Raw cotton (chiefly imported from Kenya Colony, Egypt and Tanganyika territory) recorded a decline of 400 tons in quantity and of Rs. 4 lakhs in value and stood at 2,300 tons valued at Rs. 20 lakhs. Under manu-

factured articles, imports of cotton yarn and manufactures rose by Rs. 87 lakhs. The imports of twist and yarn increased from 2.0 million lbs. to 2.5 million lbs. in quantity and from Rs. 17 lakhs to Rs. 25 lakhs in value. Under cotton piecegoods, all the three descriptions recorded increases both in quantity and value. Grey, white and coloured goods rose respectively from 16, 15 and 20 million yards to 32, 24 and 38 million yards in quantity and in value from Rs. 21 lakhs, Rs 28 lakhs and Rs. 39 lakhs to Rs. 44 lakhs, Rs. 47 lakhs and Rs. 77 lakhs. Under iron and steel there was an improvement of Rs. 4 lakhs due mainly to an increase under steel bars. The number of motor cars imported amounted to 1,454 and that of motor lorries, buses and vans to 1,235 as against 969 and 543 respectively in October, 1933. The value of motor cars imported in October, 1934, amounted to Rs. 28 lakhs and that of motor lorries, buses and vans to Rs. 15 lakhs as compared with Rs. 16 lakhs and Rs. 6 lakhs respectively in the corresponding month of the preceding year. There were noticeable increases under woollen manufactures (+Rs. 27 lakhs), artificial silk yarn and manufactures and electrical instruments (+Rs. 7 lakhs each) while there were decreases under machinery and millwork (−Rs. 21 lakhs), silk piecegoods (−Rs. 10 lakhs) and precious stones (−Rs. 4 lakhs).

Compared with October, 1933, exports of food, drink and tobacco in October, 1934 advanced by Rs. 4 lakhs to Rs. 3,59 lakhs. Shipments of rice, not in the husk declined from 91,000 tons to 62,000 tons in quantity and from Rs. 56 lakhs to Rs. 49 lakhs in value. Shipments of wheat advanced from 150 tons to 1,400 tons in quantity and from Rs. 21,000 to nearly Rs. 1¼ lakhs in value Exports of barley improved from 11 tons to 4,600 tons in quantity and from Rs. 800 to Rs. 3 lakhs in value There was also an increase of 7,000 tons in quantity and of Rs. 7 lakhs in value in the exports of pulse. The exports of tea declined from 44 millions lbs. to 41 million lbs. in quantity and from Rs. 2,56 lakhs to Rs. 2,45 lakhs in value. Exports of raw tobacco advanced from 0.9 million lbs. to 3.3 million lbs. in quantity and from Rs. 2½ lakhs to about Rs. 8 lakhs in value. Raw materials and produce exported decreased by Rs. 30 lakhs to Rs. 4,56 lakhs. Under this group, shipments of raw cotton advanced from 15,100 tons to 20,400 tons, in quantity and from Rs. 82 lakhs to Rs. 1,03 lakhs in value. Of the total shipments of 20,400 tons, Japan took 5,600 tons or 27 per cent., Italy 4,600 tons or 23 per cent., the United Kingdom 2,300 tons, China 1,400 tons, Belgium 1,300 tons, Germany and Spain 1,100 tons each, France 1,000 tons, the remainder being despatched mainly to the Netherlands, the United States and Greece. Consignments of raw jute dropped from 67,000 tons to 63,000 tons in quantity and from Rs. 93 lakhs to Rs. 84 lakhs in value. Exports of lac dropped from 61,000 cwts. to 42,000 cwts. in quantity but the value rose from Rs. 18 lakhs to Rs. 24 lakhs. Shipments of oilseeds shrank in quantity from 137,000 tons to 99,000 tons and from Rs. 1,70 lakhs to Rs. 1,19 lakhs in value. Despatches of linseed fell from 57,000 tons to 35,000 tons in quantity and from Rs. 71 lakhs to Rs. 43 lakhs in value and those of Groundnuts from 62,000 tons to 54,000 tons in quantity and from Rs. 77 lakhs to Rs. 63 lakhs in value. Rapeseed declined from 9,000 tons valued at Rs. 10 lakhs to 5,000 tons valued at Rs. 6 lakhs. Sesamum (til or jinjili) dropped from 1,700 tons valued at Rs. 2⅓ lakhs to only 21 tons valued at Rs. 5,000. Castor seed fell by 1,000 tons in quantity and by Rs. 1½ lakhs in value. Exports of raw skins declined from 1,300 tons to 800 tons in quantity and from Rs. 21 lakhs to Rs. 10⅓ lakhs in value. Raw hides on the other hand, improved by 500 tons in quantity and by Rs. 2½ lakhs in value. Exports of raw rubber improved from 0.6 million lbs. to 0.9 million lbs. in quantity and from Rs. 1⅔ lakhs to about Rs. 3 lakhs in value. Exports of raw wool declined from 5.9 million lbs. valued at Rs. 20⅓ lakhs to 3.6 million lbs. valued at Rs. 14 lakhs. Exports of oil-cakes doubled both in quantity and value and amounted to 44,000 tons valued at Rs. 26 lakhs. There was also an increase of Rs. 2 lakhs under each of the heads teak wood and fodder, bran and pollards. Manufactured goods declined by Rs. 27 lakhs to Rs. 3,83 lakhs. The yardage of gunny cloth exported rose from 104 millions to 112 millions and in value from Rs. 1,12 lakhs to Rs. 1,14 lakhs. The exports of jute bags declined from 54.6 millions to 49.7 millions in number and from Rs. 127⅓ lakhs to Rs. 1,16½ lakhs in value. Exports of tanned hides and skins declined in quantity from 1,500 tons to 1,400 tons and in value from Rs. 44 lakhs to Rs. 40½ lakhs. Shipments of paraffin wax dropped from 7,600 tons valued at Rs. 32 lakhs to 5,200 tons valued at Rs. 21 lakhs. Exports of pig iron advanced from 29,000 tons valued at Rs. 6 lakhs to 46,000 tons valued at Rs. 10 lakhs, while those of pig lead shrank from 163,000 cwts. valued at Rs. 18 lakhs to 79,000 cwts. valued at Rs. 9 lakhs. There

Vol. XIV. No. 16 SATURDAY, OCTOBER 13, 1934 Price Re. 1

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Friday.

With the exception of Government securities which remained practically unchanged, active conditions continued in almost all other sections. Jute mills shares ruled fairly steady during the early part of the session, but towards the close all on a sudden more buying power developed and a general enquiry followed. Cottons have come in for more attention and avery good turnover resulted at advancing rates. Coals kept fairly steady throughout the sessions, although a slight profit-taking was noticeable here and there. Among Miscellaneous Industrials a large trade was reported in sugar mills shares at an all-round improving rates, while Electricals, Engineering, Paper and Shipping companies' shares have come in for a fair amount of support. Teas kept fairly steady although only a limited business was put through.

Government Securities.—There was no important price movement in India Government Sterling Securities in London during the week and locally the Giltedge section remained dull with rates practically unchanged in the majority of instances. Government paper underwent very little fluctuation and at the time of writing the quotation was no better than Rs. 91-12. Among terminable loans 3½ per cent. 1947-50 kept steady at Rs. 101-7 while 4 per cent. loan 1960-70 was a shade easier at Rs. 107-6 and 5 per cent. loan 1945-55 at Rs. 117-6. Medium-dated terminables accounted for a very little business but rates in the majority of instances kept steady at last levels, while no business of any note was reported in short-dated issues. The Bank rate remained unchanged at 3½ per cent.

Fixed Interest Bearing Securities.—Buyers predominated in almost all Preference shares and restricted business was due to scarcity of sellers. Apart from Jute Mills Preferences which have keen buyers Dunbar Cotton Preference advanced to Rs. 193 and Kesoram preference kept very steady at Rs. 133-8. Among coal preferences, the enquiry for Khas Kajora continued unabated and business was reported at Rs. 11-8.

Among Industrial issues Bengal Telephone's preference was marked at Rs. 15. Burn & Co. 7 per cent. preference at Rs. 132, Indian Standard Wagon preference advanced to Rs. 126 and Kumardhubi Engineering preference to Rs. 75-8. Associated Hotels preference kept steady at Rs. 100-8 and B. I. Corporation preference at Rs. 148. Indo-Burma Petroleum preference advanced to Rs. 114-8, Cawnpore sugar preference remained very steady at Rs. 157 while Purtabpore preference improved to Rs. 17. Among Tea preference Tezpore preference kept steady at Rs. 12-2.

In debentures no business of any note was reported while the demand for Calcutta Port Trust and Calcutta Municipal issues continued along with Jute Mills and well secured Industrials.

Other Investment Stocks.—Imperial Bank's shares remained steady at the decline, although rather less business was reported. The fully paid up issues are now quoted at Rs. 1,550 and Contributories at Rs. 392. Central Banks shares were unchanged at Rs. 33-8. A transaction was reported in Punjab National Bank shares at Rs. 100 after a long interval. Only a very limited business was reported in Light Railway shares. Government Guaranteed Issues met with a keen demand but no business was reported owing to absence of sllers. Shares enjoying District Board Subsidies have also attracted a certain amount of attention. Arrah-Sasaram, Baraset-Basirhat and Buktiarpur-Bihar were enquired for but no business was reported.

Cotton.—Cotton shares attracted a considerable amount of attention in the market and a revival of interest was in evidence in this section. Bengal Nagpur (ordy.) met with a strong demand and the rate advanced to Rs. 21. Dunbar (ordy.) was marked up to Rs. 142-8 and Kesoram (ordy.) to Rs. 4-10. A keen demand was in evidence for Cawnpore textiles from upcountry and scarcity of sellers have forced up the price up to Rs. 4-4. There are buyers of Muir Mills (ordy.) up to Rs. 325 but there are no declared sellers. Bowreah (ordy.) was marked at Rs. 296-8, Benares Cotton and Silk accounted for a few deals round about Rs. 1-12 and New Victoria (ordy.) at the same figure. Elgin Mills (ordy.) changed hands at Rs. 108, New Ring (ordy.) may be placed at Rs. 90 while Mohini Mills kept very steady at Rs. 10-8 ex-dividend.

Coal.—Coal shares remained very steady and the list of transactions was once again very lengthy. Although no definite news is still available regarding the Coal Output Restriction Scheme the market is confidently expecting that some sort of relief will come to the coal trade either in the shape of Restriction or in the form of Price Agreement. Prices for better class stocks remained very firm. Bengals again advanced to Rs. 262, Burrakur (ordy.) kept steady at Rs. 14-10, East Indian at Rs. 20-8 and Equitable (ordy.) at Rs. 27-4. Hurriladih advanced about Rs. 2 during the week and are now quoted at Rs. 12-8. New Beerbhoom (ordy.) also improved to Rs. 15 buyers and New Manbhoom (ordy.) appreciated further to Rs. 47 and Amalgamateds to Rs. 21. Bengal Nagpur (ordy.) changed hands at Rs. 51-8, Katras Jherria at Rs. 35-8 and Sendra Rs. 13. Among lower-priced stocks Burra Dhemo was marked at Rs. 5-12, Ghusick and Muslia at Rs. 3-10, Mundulpore Rs. 4-10, North Damuda Rs. 3-10, Samla Rs. 3-2 and Talcher Rs. 2-8. Towards the close a more optimistic feeling prevailed and the market closed at the best of the week.

Jutes.—Commodity market ruled steady during the week under review. 9 Porter hessians were marked up to Rs. 8-12 and jute to Rs. 28-8. Heavy goods also kept firm. Jute mills shares which closely follow the commodity markets continued very steady during the early part of the week, but towards the close enquiries of a more general nature was in evidence and rates especially in higher-priced stocks improved considerably. Howrahs after opening at Rs. 54-2 on Tuesday fluctuated within narrow limits till Wednesday, but on Thursday they showed definite signs of improvement and, at the time of writing, the rate is Rs. 54-12 Kamarhatty also improved to Rs. 540.

Among higher-priced stocks Anglo-India occupied the pride of place which after keeping very steady round about Rs. 395 for the last few days, sharply advanced to Rs. 429 at the time of writing on dividend rumour. Gourepore on the announcement of a dividend of Rs. 25 per share for the half-year just closed, was marked up to Rs. 610 from a quotation of Rs. 575. Nuddea met with a keen demand and a large business was reported roundabout Rs. 47. India was also in fair demand at full rates. Among Rs. 10 stocks, Birla kept steady at Rs. 13-2, Clives at Rs. 32-4, Hukumchand at Rs. 14-8, National at Rs. 24-4 and Rutena at Rs. 76.

It is rumoured that Howrahs and Reliances will pay the same dividends as that of last half-year and if the majority of the mills which close their half-year on September 30 last distribute dividends on the same scale as that of the last half-year, prices of jute mills shares are expected to be appreciated.

Electricals.—The usual demand for electrical supply companies shares continued and a fair general business was reported. Benares kept steady at Rs. 14-8, Jubbulpore at Rs. 13-4 and United Provinces at Rs. 160. Muttra recorded a few deals roundabout Rs. 9-8 while Upper Jumna advanced to Rs. 11-4. Apart from these, Bengal Telephone (ordy., old) changed hands at Rs. 18-4 and (ordy., new) at Rs. 17-14 cum the recently declared dividend.

Engineering.—The Engineering section accounted for a fair amount of support. Arthur Butler advanced further to Rs. 14 and Britannia Building and Iron to Rs. 5. Burn & Co., (ordy.) kept steady at Rs. 265 and Indian Standard Wagon (ordy.) at Rs. 52. Indian Iron and Steel met with a good enquiry and the rate improved to Rs. 7-2. Bengal Iron also changed hands in fair quantities up to Rs. 4-2. Kumardhubi Engineering (ordy.) also were marked up to Rs. 3-10, Marshalls kept steady at Rs. 1-8 and Saran Engineering at Rs. 7-12.

Sugar.—Strong and active demand was in evidence in sugar shares and an all-round advance in rates was registered. Balarampurs was marked up to Rs. 20-4, and a large business resulted at roundabout this figure. Carew & Co., also accounted for a large turnover roundabout Rs. 21-12. Cawnpore (ordy.) improved to Rs. 37, Champaran to Rs. 25, New Savan to Rs. 15. Ryam to Rs. 39-4 and Samastipur Central to Rs. 13. South Behar was marked up to Rs. 13 from a quotation of Rs. 11, Basti sugar changed hands at Rs. 263-8, Punjab Rs. 320, Dyer Meakin Rs. 92 and Murree Brewery Rs. 201.

Miscellaneous.—Among Miscellaneous Industrials a fair general business was reported. Bararee coke was in strong demand and the rate advanced to Rs. 11-8 from Rs. 10, Burma Corporation met with a fair amount of support and changed hands up to Rs. 8-12, Britannia Biscuit was in strong demand and owing to scarcity of scrips the price improved to Rs. 8. Calcutta Tramways (ordy.) accounted for a fair turnover up to Rs. 19-6 and Indian Wood Products were marked at Rs. 35-4. Great Eastern Hotel was marked up to Rs. 81 and Karanpura Development to Rs. 12-8.

Among Oil shares British Burma Petroleum improved to Rs. 6-2, British Ceylon Corporation to Rs. 10 and Howrah Oils kept steady at Rs. 9-2. Paper mills shares were very firm. Bengal Paper (ordy.) advanced further to Rs. 101 and Titaghur Paper (ordy.) to Rs. 21 while defds. are quoted at Rs. 9-2. Midnapore Zemindary (ordy.) kept steady at Rs. 70. Among Shipping companies, India General Navigation and Railways (ordy.) was marked at Rs. 102.

Rubber.—Dull conditions have obtained in Rubber shares and prices in the majority of instances were inclined to sag.

Teas.—Owing to slight setback in London Tea Sales recently, interest in Tea shares has slackened off somewhat. Prices are slightly below the best but the undertone kept fairly steady. Nevertheless, the industry is on a sound basis and a general improvement is expected before long.

BOMBAY STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Friday Evening.

Money Market.—Call money was quoted 1½ per cent.

Exchange Market.—The market was steady with Banks selling T. T. at 1s. 6 3/64d. for October/December; 1s. 6 1/32d. for January/February; 1s. 6d. March/June; 1s. 5 31/32d. for July/September, 1935. Banks were buying 3 months bills at 1s. 6 1/8d. for October/December.

Securities.—The Paper market was steady. 3 per cent. 1941 quoted at Rs. 99-6; 3½ per cent. at Rs. 91-15; 1947/50 at Rs. 101-7; 1943 at Rs. 105-7; 1960/70 at Rs. 107-7; 1955/60 at Rs. 112-12; 1933 at Rs. 102-8; 1939/44 at Rs. 108-3; 1940/43 at Rs. 109-3; 1938/40 at Rs. 109-3; 1945-55 at Rs. 117-8; Bombay Development at Rs. 104-10.

Share Market.—The market opened yesterday with good deal of activity in Steels and Textiles. The Market seems to be reaching dangerous levels.

Textiles.—On the strength in Cotton and Silver, Textiles shares soared up with Bombay Dyeings rising about 60 points to Rs. 948; Central Indias are at Rs. 341-4; Centuries at Rs. 343-12; Colabas at Rs. 140; Gokaks at Rs. 178-12; Kohinoors at Rs. 218-12; New Great at Rs. 207-8; Phoenix at Rs. 328-12; Simplex at Rs. 120-10; Swadeshis at Rs. 259-6; Swan at Rs. 77-8; Morarjees at Rs. 1,530; Vishnus at Rs. 1,500.

Hydro Electrics.—A substantial rise specially in Andhras and Powers was recorded. Andhra Valleys touched as high as Rs. 1,601-4; Hydros to Rs. 161-4; and Powers to Rs. 1,366-4.

Iron and Steel.—On speculative support, Ordinaries have reached the high level of Rs. 109-8 compared to Rs. 96 during last week and Deferreds have improved to Rs. 477-8 compared with Rs. 416 of last week. Second Preferences are steady round about Rs. 172.

Cements.—Steady. Bundis quoted Rs. 34-4; Gwalior Rs. 107-8; Indian at Rs. 476-4; Katni Deferreds and Ordinaries at Rs. 1,135 and Rs. 342-8; Okha at Rs. 200; Punjabs Rs. 25-6; Shahabad Rs. 358-12; Uniteds are lagging behind around Rs. 83.

Miscellaneous.—Belapur sugars have been active and are now at Rs. 252-8; *and there seems to be still scope for appreciation.* Bombay Burmas, which were done as low as Rs. 430, have improved to Rs. 446-4. B. B. Petrols had a spurt to Rs. 6-2 and closed at Rs. 5-13. Scindias closed at Rs. 13-13; Shivarajpurs at Rs. 42; Contructions are steady at Rs. 82; Bombay Telephones are quoted Rs. 111; Trams at Rs. 163-2; Alcocks are higher at Rs. 227-8.

Banks and Insurance.—Imperial fully-paids and partly-paids have improved to Rs. 1,563-12 and Rs. 400 respectively. Barodas were steady at Rs. 102-12; Centrals at Rs. 33-2; Bank of Indians at Rs. 118; Unions at Rs. 5-1-6.

Oriental Life was steady at Rs. 3,900; New Indias at Rs. 36-14; Vulcans at Rs. 8-4.

MADRAS STOCK EXCHANGE.

(By Wire)

(From Our Correspondent)

Madras, Oct. 11.

Government Securities.—The securities market ruled steady and dull during the week under review. There was not much business passing in Paper, though good business was done in 4 per cent. 1960-70 Loan at the lower levels, Bombay being the buyer, with enquiry still unsatisfied. The New Loan was dealt in at Rs. 99-5-6, while 3½ per cent. 1947-50 Loan was a shade easier with business done at Rs. 101-6. There were sellers of Treasury Bonds 5 per cent. 1935 Bonds and medium-dated loans with enquiry being poor, while prices were marked down all along the line. Among long-dated loans 5 per cent. 1945-55 was neglected.

Mysore Loans continued firm with 5 per cent. in great demand. The Mysore Government have called for subscriptions to the New Loan limited to Rs. 50 lakhs carrying interest at the rate of 3½ per cent. free of tax in Mysore State and British India repayable between 1951-58 with issue price at par. The list will open on October 15 and will close immediately the amount is subscribed. The success of the loan is a foregone conclusion.

Port Trust and Municipal Debentures were neglected whilst amongst joint stock company debentures there was a good demand. Peermade Tea Debentures, which seldom come on the market, were done at Rs. 110.

The Preference share market was quite active with keen enquiry from Calcutta side for Spencers A & B preferences and from the Bombay side for Tata Steel second preferences. Spencer A & B preferences have improved to Rs. 10-4 and Rs. 12 respectively, while Tata Steel second preferences after being dealt up to Rs. 175 reacted, closing at Rs. 172. The undertone was firm. Deccan Sugar preferences were done at Rs. 130.

Banks.—Bank shares firmed up again with Imperial fully-paids done at Rs. 1,555 and the partly-paids at Rs. 390. Business in other bank shares was negligible, though the Bank of Mysore noted a solitary deal at Rs. 235 with buyers over.

Public Utilities.—This section continued strong. Tata Powers rose to Rs. 1,320 reacting to Rs. 1,300. Vellore electrics were done at Rs. 12-12, whilst a big block of Madras Telephones changed hands at Rs. 29-12; we recommend these shares on investent account to give a return of 4½ per cent. free of tax. There appears to be scope for both capital appreciation and increased dividends. Upper Jumna electrics were done at Rs. 11-8, while Rangoon electrics were asked for at Rs. 25-4 ex dividend.

Mills.—Mills were firm. Buckingham and Carnatics rose to Rs. 208 and Bangalores to Rs. 126½; Premier Hosiery Works ordinaries were done at par with buyers over. Other scrips showed no change excepting for a strong enquiry for Coimbatores at current levels.

Cements.—Cements were active. Indian cements rose to Rs. 490 falling back to Rs. 482½. Whilst other scrips advanced 10 points, Bundis and Punjabs, previously recommended, rose to Rs. 35-8 and Rs. 26 respectively and they are likely to go higher. Coimbatore cements improved further to Rs. 162.

Sugars.—The sentiment in this section was bullish on Bombay support. Belapurs advanced to Rs. 252½ reacting at the close to Rs. 248-12. A heavy turnover resulted in Calcutta shares particularly Carew & Co., at Rs. 22, New Savans Rs. 15; Cawnpores Rs. 36-8, Purtabpores Rs. 16-8 and Samastipurs at Rs. 13¼. Amongst local shares East India Distilleries ordinary and preferences were dealt in at 25s. 3d. and 25s. 6d. respectively, closing at 25s. 6d. and 26s. respectively. Deccan sugars were in keen demand with buyers up to Rs. 263 with nothing offering whilst India sugars noted several deals at Rs. 11.

Rubber and Tea.—Rubber and tea were dull excepting Davashola teas. The company has declared an *ad interim* dividend of 2 per cent. free of tax. *We recommend these shares for lock-up purposes.* These were done at Rs. 8-4 cum dividend.

Miscellaneous.—The section was prominent for the interest displayed again in Tata Steel ordinaries and deferreds. These have risen further and appear like going up, the closing rates being Rs. 103-8 for ordinaries and Rs. 442-8 for the deferreds.

NEW YORK STOCK EXCHANGE

Thursday Morning.

The market closed higher and firm sentiment was more hopeful. United States Steel Company shipped in September 370,000 tons.

LONDON STOCK EXCHANGE

During the week under review the London Stock Exchange lacked in animation. The gilt-edge market was dull and there was not much fresh buying. The Indian loans were firm throughout the week though they experienced a setback on Monday. Among other sections Home Rails were steady. Oil shares showed a tendency to improve but towards the end failed to keep it up. There was a sharp fall in rubber prices early in the week. Teas showed a declining tendency while tobaccos were steady. Industrials were dull and featureless.

COMPANY REPORTS

KATRAS JHERRIA COAL COMPANY, LD.

The Managing Agents beg to submit the Audited Accounts of the half-year ended July 31, 1934.

After writing off Rs. 15,392-1-9 for Depreciation there is a balance at the credit of Profit and Loss Account of Rs. 45,578-7-6 from which they recommend:

	Rs.	A.	P.
Dividend of 12 annas per share ...	37,500	0	0
Carry forward	8,078	7	6

Raisings and Despatches improved as compared with the previous half-year but the average selling price was lower.

Andrew Yule & Co., Ld., and J. H. S. Richardson, Director—Managing Agents.

Comparative statement of balance sheets for the last three consecutive half-years:—

	Half-year ended 31-7-34 Rs.	Half-year ended 31-1-34 Rs.	Half-year ended 31-7-33 Rs.
Liabilities—			
Capital ...	5,00,000	5,00,000	5,00,000
Reserve ...	4,04,850	4,04,850	4,04,850
Debts ...	2,22,764	1,98,813	2,07,139
Profit and Loss ...	45,578	45,133	44,951
Total ...	11,73,192	11,48,796	11,56,940
Assets—

Total ...	11,73,192	11,48,796	11,56,940

BENARES ELECTRIC LIGHT AND POWER CO., LD.

The Directors beg to submit the Audited Accounts for the half-year ended June 30, 1934.

Plant.—Plant has run satisfactorily during the half-year and is maintained in good conditions.

The maximum load experienced during the period was 1,300 k.w.

Mails.—Extensions to Mains were carried out in Makbul Alam Road, Jailpura and Trilochan Ghat.

General.—The following statement shows the Company's operations:—

Half-year ended	Total connections	Units sold	Revenue Rs.
December 31, 1932 ...	2,045	2,212,822	2,46,002
June 30, 1933 ...	2,224	2,352,300	2,40,444
December 31, 1933 ...	2,383	2,368,449	2,56,719
June 30, 1934 ...	2,540	2,505,943	2,44,833

The reduction in the rate for Lighting and Fans as from January 1, 1934, has resulted in reduction of Revenue although the increase in the number of units sold has tended to counteract loss. It is hoped that this increase will be further accelerated so as to enable additional concessions in Domestic supply rates and conditions. The Directors are following closely the possibilities in this direction.

Accounts.—After providing for all charges including Rs. 49,840-2-10 on account of Depreciation and writing off Rs. 5,000 in respect of Preliminary Expenses and Rs. 5,000 in respect of Brokerage on placing shares, a balance of Rs. 56,149-0-2 including Rs. 9,018-1-6 brought forward from the previous half-year remains available, and this the Directors recommend be disposed of as follows:

	Rs.	A.	P.
In payment of a dividend at the rate of 6% per annum free of Income Tax	50,997	0	0
Carrying forward to next half-year ...	5,152	0	2
Total ...	56,149	0	2

R. N. Mookerjee, S. D. Gladstone, A. T. Taylor, T. Leslie Martin—Directors. Martin & Co.—Managing Agents.

Comparative statement of balance sheets for the last three consecutive half-years:—

	Half-year ended 30-6-34 Rs.	Half-year ended 31-12-33 Rs.	Half-year ended 30-6-33 Rs.
Liabilities—			
Capital ...	16,99,900	16,99,900	12,99,900

BAREILLY ELECTRIC SUPPLY CO., LD.

The Directors beg to submit the Audited Accounts for the half-year ended June 30, 1934.

Plant.—Plant has run satisfactorily and has been maintained in good condition.

The Maximum Load experienced during the half-year was 523 k.w. Owing to the shortage of water in Bareilly the construction of a Tube Well was authorised and the work carried out during the half-year. The well has been completed and tested and will be taken into commission as soon as the plant is received.

The total cost is estimated at Rs. 3,204.

Mains.—Extensions of Mains have been carried out in Nainital Road and Mohalla Bamanpuri.

General.—The following statement shows the Company's operations:—

Half-year ended	Total connections	Units sold	Revenue Rs.
December 31, 1932 ...	905	475,463	1,05,787
June 30, 1933 ...	1,009	718,915	1,40,950
December 31, 1933 ...	1,084	608,726	1,29,566
June 30, 1934 ...	1,155	727,322	1,47,549

While there has been slight increase in consumption and Revenue over the corresponding period last year, there is uncertainty as to the future development and working in the sugar industry in Bareilly.

Accounts.—After providing for all charges including Rs. 21,049-15-3 on account of Depreciation and transferring Rs. 20,000 to general and Rs. 5,000 to obsolescence reserves, a balance of Rs. 19,216-3-2 remains, and this the Directors recommend be disposed of as follows:

Payment of a dividend at the rate of 5% per annum free of Income Tax	15,000	0	0
Carry forward to next half-year ...	4,216	3	2
Total ...	19,216	3	2

R. N. Mookerjee, A. S. Mitchell, S. D. Gladstone and T. Leslie Martin—Directors. Martin & Co.—Managing Agents.

WORLD OF INDIAN FINANCE

Friday Evening.

Money conditions have firmed up perceptibly during the week. Interbank call money has been done at over 2½ per cent.; and at this rate there is a good demand which has not all been satisfied. The change that has come over the money market is reflected clearly in the results of the Treasury Bills auctions this week. The total amount applied for by the market amounted to only Rs. 218.25 lakhs, which compares with Rs. 253 lakhs last week and as much as Rs. 462 lakhs, in the week before. A similar downward trend is also noticeable in the sales of intermediate Treasury Bills. These have come down during the last three weeks from Rs. 172.25 lakhs to Rs. 133.25 lakhs and thence to Rs. 112.75 lakhs. In such conditions, it is hardly surprising that the Government have had to pay an average rate of Rs. 1-6-8 per cent. of their short-term accommodation, as against Rs. 1-5-11 per cent. in the previous week. Owing to the marked rise in the average rate of accepted tenders, the tap rate for the sales announced in this week's communique of the Controller of the Currency has had to be increased from Rs. 1-4 per cent. to Rs. 1-5 per cent. The increase in both the average rate and the tap rate shows definitely that conditions of tightness have begun to be experienced in the money market.

It may be asked whether this will not prove to be merely a passing phase and whether after sometime a lapse into the easier conditions of the previous weeks will not occur. In considering this question, it must be remembered in the first place, that it is a long time since banks used to work with a large volume of balance. It is no exaggeration to say that for sometime banks have been working on such a low surplus that an unexpected demand of say Rs. 50 lakhs would make a very serious difference in the position. Secondly, as we have been stressing during the last few weeks, the investment of funds released by the repayment of Government loans has gone ahead and has been completed. It is in this context that we drew attention last week to the phenomenon of an all-round and general rise in the price of ordinary shares in all the important stock exchanges of the country. Since we wrote in these columns last week, there has been a growing confirmation of the view that we took that there is a definite tendency towards investment in equities. Market circles firmly believe that speculative operators, particularly those of the Marwari community, are taking the view that there is not much to go for in the giltedge market and that they are seeking fresh fields in the share markets. It is also within our knowledge that firms of share brokers, who have a large clientele upcountry, have been practically inundated of late with enquiries from mofussil stations as to the prospects of particular groups of companies and particular industries. It is even said that it has passed the stage of a merely hesitant enquiry and that instructions are being received to buy scrips at best prices. Definite instructions of this kind are often the best proof of the change in the mentality of people towards speculative investment in ordinary shares.

There is thus evidence of a brisk use of funds in all quarters, and when funds are being put to such brisk use at a time when banks are themselves working on low margins, the effect on money conditions may be easily imagined. It will be seen, therefore, that the firmness of money experienced during the week will not prove to be a merely passing phenomenon. And so far as the Government is concerned, they would be ill-advised to think that their short-term accommodation will be forthcoming from the market on anything like the terms they used to get in the middle of the year. We are even inclined to suggest that this week marks the beginning of cold weather finance and Government should be prepared to yield higher rates on Treasury Bills.

The giltedge market is passing through a phase of dullness; and there would have been no notable movement in rates but for the unexpected stimulus which originated in the assassination of King Alexander of Yugoslavia and M. Barthou, the French Foreign Minister, at Marseilles. It is, indeed, strange that the Indian giltedge market should have derived any strength from incidents in Europe with which this country has apparently no direct connection. But the fact of the matter is that the assassination of King Alexander, as our comments in both

the Editorial and Finance Abroad sections will show, has raised the fear of war in the minds of people; and as there can be no war in Europe without France having to bear the brunt of it, the assassination has been followed by widespread fear in the Continent about the stability of all European currencies. This has been the cause of an influx of funds into London, which resulted in the strengthening of sterling both in terms of the dollar and in terms of the franc. But what is important from the standpoint of the Indian giltedge market is that the heavy influx of funds into the London money market created a better demand for British giltedge securities. And from the position which Indian giltedge has enjoyed all along in the London stock exchange, India sterling stocks participated freely in the rise. It is noteworthy that while 3½ per cent. sterling paper was quoted only £96¼ at the end of last week it rose during the middle of the week to as much as £102. Such a strength in sterling stocks is naturally communicated to the Rupee scrips. It is thus that it happens that, while the giltedge market was experiencing some what dull conditions, 3½ per cent. paper is now quoted at Rs. 91-14 with buyers over, as against the quotation of Rs. 91-11 sellers at the end of last week. The giltedge market at the time of writing is steady, but the liquidation of medium-dated securities has proceeded so far that very often sales of these scrips are found to be difficult though they are still far from unsaleable.

As pointed out earlier the giltedge market has been deprived of the drive that there always is in Marwari speculation as this community is now believed to have turned its attention to the share markets. It is, indeed, a phenomenon that such a pronounced interest is shown in shares. The sugar companies have benefitted by this newfound interest. And it is not surprising that, when one comes to think of it, the sugar industry has the highest potentialities for growth in this country. Cotton is reported to be experiencing something bordering on a boom. Jute shares have gone up in the face of the imminent unsealing of 2½ per cent. of the looms next month. The jute mills by all tokens are making good profits. Coal shares have improved considerably towards the end of the week on the report that the collieries have been able to agree on a scheme of restriction of output and thus relieve the Government of India of their uneasy conscience about imposing by legislation a scheme of compulsory restriction on the whole industry. If it is also remembered that the prospects of tea are bright, there is hardly any dark spot in the Indian stock exchanges.

The liveliness which characterised the share markets is only second to the liveliness of the bullion market. Both gold and silver have risen to much higher levels. The reaction from the rise in sterling caused by the assassination of King Alexander has given the occosion for the spurt in the sterling price of gold; and those who in India have waited a long time for the expected rise in the price of gold may now conceivably feel tempted to unload a part, if not, the whole, of their holdings. Considering the rise in the price of gold, it is not impossible that this week's shipments from Bombay are appreciably more than the shipments of last week.

As for silver, a somewhat intriguing situation has developed during the last fortnight. While formerly it was generally believed that America's efforts to raise the price of silver must be welcomed by the silver-using countries, and especially China, we uttered a note of warning in our columns that a rise in the price of silver is far from an unmixed blessing for the Celestial Empire. For, it should not be difficult to understand that a rise in the price of silver means that every silver currency will become over-rated in the international exchanges.

During the early stages of America's programme of purchasing silver abroad. China would appear to have been undecided about the attitude that she should take. Only last week, the Chinese authorities made up their minds to hand a note of protest to the American Government, and it is not known yet what reply America has put forward to China. But it is fairly certain that China's protest has not deterred the American Government from continuing their purchases of silver in foreign countries. Only for a short period is America known to have given up her purchase of silver in order that the depreciation of the dollar might be prevented. The American Government were anxious in view of the re-financing programme of the Treasury to carry conviction to the investors that no large-scale inflation or depreciation of the exchanges was intended. With this view there was a cessation of purchases of silver; but it was only for a short time. During the last three weeks there have been persistent white metal. In such circumstances, the obvious reports of America continuing to purchase the course for China, intent as she is on avoiding any serious inflation of the exchange value of her currency, is to take advantage of every rise to sell silver. It is apprehended that this policy will not suffice to meet the requirements of the case; and China is actually divided in her mind between trying to depress silver prices and exploring the means of changing over to a gold standard. This piquant

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

The international exchanges during the week were profoundly disturbed by the tragedy that took place in Marseilles on October 9. One would have thought that in the sphere of the exchanges, which has never been too calm, an event, if anything of political significance, would have no importance. In fact, the business world should learn not to exaggerate the economic and financial implications of accidents in the political world. It is true that big businessmen ought to be able to peer a little into the future of international political relations, if they are not to be surprised by altogether untold developments. But it would be very unfortunate for business if every accident to a King or a Minister should be followed by serious upsets in the business world. Nevertheless, it is hardly surprising that the manner in which King Alexander of Yugoslavia and M. Barthou, the Minister for Foreign Affairs in the French Republic, met with their end have raised serious unrest in the mind of people. Considering the political relations between France and the Little Entente and the mission on which King Alexander was proceeding to Paris, the death of the King as well as France's Foreign Minister damps such hopes as were entertained of understandings that might postpone, if not altogether eliminate, the chances of serious friction in Central Europe. Apart from these considerations, the death of a King of one of the smaller nations through an assassin's bullet raises in people's minds the memory of the grim tragedy at Serajevo and the fear that on this occasion also the pistol shot at Marseilles might well prove to be the signal for the nations of the world to grapple together again in another deadly conflict.

It is these fears that are behind the heavy influx of funds into London, which was responsible for the firming up of sterling in relation to both the dollar and the franc. It is quite understandable that the brunt of any serious conflict in Europe will have to be borne by the French people ; and the obvious result of France engaging in a war of big proportions is the weakening, and, possibly, the disruption, of the French currency. That the tragedy at Merseilles should have had such lightening effect on the exchanges shows not so much the capacity of international financiers to assess the significance of each event in the political sphere, as the state of intense nervous excitement which is now prevalent in the financial world. But for the fact that the assassin was known to be a Yugoslav, the slump in the franc and the European exchanges should have continued longer.

As it is, the table at the beginning of this article does not show any traces of the upset that occurred as a result of the unfortunate happenings at Marseilles. One would think that there was no more during the week than the usual tendencies in the sphere of the international exchanges. If one puts out of mind the strength which sterling gained as a result of the scare in Europe, the net result of the movements of the international exchanges during the week is that sterling touched another low level both in relation to the dollar and the franc. The sterling-dollar rate came down as low as 4.90⅜ and the sterling-franc rate came to 73.96. The result is that the London market recorded a yet higher level of sterling price of gold at 142s. 9d. Thus the declining tendency of sterling, which has persisted for over a month despite occasional upsets in the other direction, has continued during the week.

It is not surprising, therefore, that the Committee of the Governors of Central Banks affiliated to the Bank for International Settlements expressed their opinion strongly in favour of Great Britain stabilising sterling. That Great Britain is in no mood to be hustled over this question, few would doubt. For Great Britain has been determined, ever since the abandonment of the gold standard in 1931, that she will not return to gold, unless certain conditions, which her experiences between the period 1934 and 1931 showed to be absolutely necessary for the proper working of the gold standard ; were obtained and guaranteed by the rest of the world. Though this seems like asking too much of a world, which is neither willing nor able to give what is demanded, the fundamental reasonableness of this view cannot be denied. But Great Britain is yet to recognise that every nation has similar, if not, an identical right to demand guarantees from herself and others.

The pity of the present position is that each is concerned with its own rights and has little thought of the obligations which always go with rights. A fortnight ago, it was rumoured that America and Great Britain had actually engaged in *pourparlers* regarding the conclusion of a stabilisation agreement. Though these rumours were discounted, they were not altogether discredited. The report succeeded in inducing the belief that the two countries had come nearer to each other in their ideas of the proper relation between the value of sterling and the value of the dollar ; and on such slender foundations the world ventured to hope that before long there might be the beginnings of an effort to end the chaos in international finance. Now it would appear that, far from there having been such a progress, there has actually been a setback. A scrutiny of the report of the deliberations of the gold bloc in *Air Mail* week shows that the gold countries had been considering very much more than the provision of mutual assistance in case of any danger to a gold currency. The reports at the time were content to state that the gold bloc had re-affirmed their intention, which was stated clearly at the time of the hapless World Economic Conference, to stand by each other and to see that the gold standard nations stand or fall together. What actually had happened was that the gold countries had been debating among themselves a scheme of strengthening the commercial ties amongst themselves. This is, perhaps, the first time that the countries, which still remained on the gold standard, have endeavoured to bind themselves together by common commercial ties, in the same way in which Great Britain has succeeded in forming altogether what is called the sterling bloc. Though the term "sterling bloc" normally conveys the idea of a group of countries which had endeavoured to keep a currency of common value, it is in practice something very much more. Through the trade treaties, through the facilities that the London capital market is in a position to give and through the political power which Great Britain is able to wield over certain parts of her Empire, Great Britain has actually succeeded in creating a group of countries which have amongst themselves the ties of common currency and close economic relations. That the gold countries had debated the exchange of commercial facilities amongst themselves shows that France and her colleagues in the gold bloc are now actuated by the same aspirations as inspired Great Britain throughout the year 1933 and which inspire Great Britain even to-day to a large extent. The prospect of a world divided into two groups of nations, each having a different currency and each attempting to consolidate itself into a separate circle of trading nations, is, indeed, a disturbing prospect.

Indian Finance

MONTHLY REVIEW OF TRADE AND FINANCE

Vol. No. XIV. AUGUST, 1934.

Our readers will note that the scope of the Monthly Review of Trade and Finance has been expanded as from this issue to include production statistics and the cost of living indices for principal centres. With the figures of foreign merchandise and treasure, the production statistics, the figures of coastal shipping, railway earnings and the usual currency and monetary statistics, the public should have fairly complete data for judging the trends of business in India. Hitherto, we had been content merely to watch the figures of foreign trade and to deduce therefrom, the trends of internal business activity. When statistics of production are made available, there is more direct means of judging business trends within the country. But unfortunately, production statistics lag behind the figures of foreign trade in point of up-to-dateness. While the figures of foreign trade are available for the month of August, production figures in the case of some of the principal industries are available only up to June. And even in regard to June, only provisional figures are furnished by the Department of Commercial Intelligence for most of the industries and in the case of sugar which is, by all criteria, an important staple industry, not even the provincial figures are ready. In fact definite statistics are not available for any month of the current financial year. It is, indeed, too much to expect that production figures could be prepared up to the same period as foreign trade. That the difference, generally speaking, does not exceed the period of one month is something to be grateful for. So far as production is concerned, one might admit that no serious difference would occur within a month to invalidate such inferences as one might draw on the basis of the figures of the previous period.

One would wish, however, that there were a composite production index showing the trend of productive activity as a whole within the country. Much as we would like a computation of that kind enabling a clearer idea of the trends of business we would still consider any attempt to calculate the production index as somewhat premature. For the attempt of the Department of Commercial Intelligence to collect the statistics of production is yet very young. It will take sometime before the machinery could be perfected. And one would feel sceptic of the reliability of production statistics, except that some of the industries are in for the levy of an excise duty. Pig iron, sugar, and matches are the most important. Jute manufactures do not offer a very serious problem. As the jute industry is well organised, the task of procuring the statistics of production is by no means too intricate or difficult. The same might be said of kerosene, petrol, and coal. Only in the case of cotton manufactures and cotton piece goods is the work complex, the mills being spread over the country. It is very much to be desired that the Department of Commercial Intelligence should attempt through the provincial directors of industries to furnish statistics of handloom and handspinning production. It is only, when the machinery for collecting production statistics has been perfected, that any attempt can be made to calculate a composite production index. It is to be hoped that the day is not far off.

But for the present the data for estimating roughly the fluctuations in business are fairly complete. It is well-known that foreign trade has been brightening up for some time though, August has seen somewhat of a setback and during all these months imports have improved at a higher rate of acceleration than exports. To this satisfaction may be added the satisfaction of seeing that generally speaking, production figures for the first quarter of 1934-35 have shown a marked improvement over the figures of the corresponding period of the previous year. The internal production of cotton piecegoods has been maintained in the first quarter well above the level of last year. The same may be said of pig iron and iron and steel manufactures. The cement companies have also maintained a higher rate of output. The chemical industry is doing well, so far at least as production is concerned. Coal raisings have been uniformly higher during April, May, and June over the corresponding months of the previous year. Jute manu-

STATISTICAL DATA FOR AUGUST, 1934.

	Aug. 1934	July 1934	Aug. 1933

*Weekly average returns.

factures show a decline only in June, as compared with June 1933. It is yet too early to say whether the protectionist policy pursued intensively during the last three years has set up forces tending to a uniformly higher level of production in all indigenous industries, owing to the expansion of the internal markets. But on the supposition that Indian capitalists are not given to overproduction in the way in which the industrialists of advanced nations of the West are, it may be said that the transition to the new economic order presupposed in a policy of protectionism is well on the way.

The figures of foreign trade for August 1934, are not as encouraging as one might wish. For while imports at 10.68 crores show more or less the same increase of about 78 lakhs over the figures of July 1934 and August 1933 alike, exports of Indian merchandise at 12.13 crores show a fall of 46 lakhs as compared with the previous months and a fall of as much as 1.90 crores as compared with the corresponding period of the previous month. The changes in the figures of re-exports which are shown on this page are not of much importance in determining the trends of our foreing trade. The change thus coming over us is better shown by a study of the figures for the five months April to August. While imports during this period amounting to 51.8 crores show an increase of 4.84 crores as compared with the first five months of 1932-33, exports at 62.11 crores show an increase of only 2.37 crores. We are thus impelled to return to the point we had been urging in the last two issues of the Monthly Trade supplement that the imports are growing at a rate which the country cannot regard with equanimity. How far the increase in imports is due to the deflection of our fiscal policy in favour of foreign interests is a question which cannot be gone into here. But it is certain that a change like this in such a short period as, say, a half year must be deemed to be really disturbing.

STATISTICAL DATA FOR FIVE MONTHS.

From April 1st, 1934 to August 31st, 1934.

*Monthly averages.

The uneasy sense is not mitigated by a consideration of the favourable balance of trade in merchandise and treasure. The total visible balance of trade in August, 1934, was only 293 lakhs in favour of India as compared with 902 lakhs in July, 1934, and 890 lakhs in August, 1933. During the five months ending August, 1934, the visible balance of trade in merchandise and treasure was 34.90 crores in favour of India as compared with 36.58 crores in the corresponding period of last year. The visible balance would have been even less but for the increase in the exports of silver from India, which amounted to 1.09 crores in the five months April to August, 1934 and which at that level shows an increase of 74 lakhs as compared with the previous year.

If the general picture is not quite heartening, a scrutiny of the figures of exports of particular commodities does not render it the less so. Raw jute and manufactures show an increase in volume and value as compared with the previous month. But they suffer if one compares the figures of the current year with those of the previous year. Though in respect of the quantity jute manufactures at 66,000 tons show an improvement of 1000 tons, there is a considerable fall in value. Raw jute remains an exception showing an increase as compared with the previous year but a marked decrease as compared with the previous month. Exports of rice rose from 98,000 tons in July, 1934 to 111,000 tons in the month under review. But when it is remembered that in the previous year the increase was from 131,000 tons to 159,000 tons in the same period, one will not mistake the downward trend of our rice exports. The change in value is even more serious being only Rs. 78 lakhs during August as compared with 98 lakhs of rupees in August, 1933. In the case of oilseeds, the trend of 1933 has been reversed in 1934. While in the first five months of 1933-34 oilseeds showed from month to month a marked increase both in volume and value, in the current year there has been an unmistakable downward trend. The volume of oilseeds exported has declined from 83,000 tons in July, 1934 to 75,000 tons in August, while the corresponding figures for the previous year are 105,000 and 145,000 respectively.

As compared with August, 1933, the imports of food, drink and tobacco in August, 1934 increased by Rs. 12 lakhs to Rs. 1,04 lakhs, imports of raw materials fell by Rs. 11 lakhs to Rs. 1,21 lakhs and those of manufactured articles rose by Rs. 74 lakhs to Rs. 8,22 lakhs. Under food, drink and tobacco, imports of sugar 16 D.S. and above (including beet) fell from 23,000 tons to 19,000 tons and in value from Rs. 24 lakhs to Rs. 19 lakhs. Arrivals of raw tobacco declined from 543,000 lbs. valued at Rs. 5 lakhs to 216,000 lbs. valued at Rs. 2 lakhs. Arrivals of rice, not in the husk recorded an increase having amounted to 24,000 tons (Rs. 15 lakhs) as compared with 300 tons (Rs. 22,000) in August, 1933. Under raw materials, the imports of kerosene oil rose by 2,166,000 gallons to 5,794,000 gallons in quantity and by Rs. 6

lakhs to Rs. 19 lakhs in value. Imports of mineral oils other than kerosene fell to 10 million gallons valued at Rs. 27 lakhs, which meant a decline of 2.6 million gallons in quantity and of nearly Rs. 8 lakhs in value. Imports of coconut oil also recorded a decrease of 21,000 gallons in quantity and of Rs. 1½ lakhs in value. Raw cotton (chiefly imported from Kenya Colony, Egypt and Persia) recorded a slight fall of nearly 100 tons in quantity and of Rs. 1 lakh in value. Under manufactured articles, imports of cotton yarn and manufactures rose by Rs. 28 lakhs. The imports of twist and yarn fell from 2½ million lbs. to 2 million lbs. in quantity but the value remained stationary at Rs. 20 lakhs. Under cotton

(*Continued from page 3*)

piecegoods, all the three descriptions recorded increases both in quantity and value. Greys, whites and colours rose respectively from 24, 16 and 23 million yards to 26, 23 and 28 million yards in quantity and in value from Rs. 30 lakhs, Rs. 30 lakhs and Rs. 43 lakhs to Rs. 36 lakhs, Rs. 43 lakhs and Rs. 61 lakhs. Under iron and steel there was an improvement of Rs. 5 lakhs due mainly to an increase under steel bars. The number of motor cars imported amounted to 1,110 and that of motor lorries, buses and vans to 734 as against 658 and 382 respectively in August 1933. The value of motor cars imported in August, 1934, amounted to Rs. 19 lakhs and that of motor lorries, buses and vans to Rs. 9 lakhs as compared with Rs. 12 lakhs and Rs. 5 lakhs respectively in the corresponding month of the preceding year. There were noticeable increases under woollen manufactures (+Rs. 21 lakhs), artificial silk yarns and manufactures (+Rs. 14 lakhs), and coal tar dyes (+Rs. 7 lakhs), while there were decreases under machinery and millwork (−Rs. 41 lakhs), silk piecegoods (−Rs. 4 lakhs), precious stones (−Rs. 3 lakhs) and paper making materials and oil-seeds (−Rs. 2 lakhs) each.

Compared with August, 1933, exports of food, drink and tobacco in August, 1934, declined by Rs. 37 lakhs to Rs. 3,92 lakhs. Shipments of rice, not in the husk declined from 159,000 tons to 111,000 tons in quantity and from Rs. 98 lakhs to Rs. 78 lakhs in value. The exports of tea dropped from 43.2 million lbs. to 40.9 million lbs. in quantity and from Rs. 2,96 lakhs to Rs. 2,73 lakhs in value. Shipments of wheat showed a remarkable improvement from only 100 tons to 6,000 tons in quantity and from Rs. 19,000 to Rs. 5 lakhs in value. There was also an increase of Rs. 2 lakhs in the exports of raw tobacco and a fall of Rs. 4 lakhs under fruits and vegetables. Raw materials and produce exported decreased by Rs. 1,21 lakhs to Rs. 4,60 lakhs. Under this group, raw cotton recorded an improvement of 2,000 tons in quantity and of Rs. 7 lakhs in value. Of the total shipments of 32,300 tons, Japan took 18,600 tons or 57 per cent. Italy 3,800 tons, the United Kingdom 2,500 tons, Belgium and Germany 1,500 tons each, France 1,100 tons, the remainder being despatched mainly to the United States, Spain, the Netherlands and China. Consignments of raw jute decreased slightly from 48,000 tons to 47,000 tons in quantity and from Rs. 73 lakhs to Rs. 64 lakhs in value. Exports of lac dropped from 33,000 cwts. to 25,000 cwts. in quantity but the value rose from Rs. 9 lakhs to Rs. 14 lakhs. Shipments of oilseeds shrank in quantity from 145,000 tons to 75,000 tons and from Rs. 1,90 lakhs to Rs. 86 lakhs in value. Despatches of groundnuts fell from 67,000 tons to 38,000 tons in quantity and from Rs. 87 lakhs to Rs. 37 lakhs in value. Linseed dropped from 48,000 tons to 25,000 tons in quantity and from Rs. 64 lakhs to Rs. 33 lakhs in value. Rape seed declined from 11,000 tons to 2,000 tons and from Rs. 13 lakhs to Rs. 3 lakhs. Castor seed fell from 16,000 tons valued at Rs. 20 lakhs to 7,000 tons valued at Rs. 9 lakhs. Sesamum (til or jinjili) also fell from 1,300 tons to 400 tons in quantity and from Rs. 2 lakhs to Rs. 75,000 in value. Exports of raw skins declined from 2,000 tons to 1,100 tons in quantity and from Rs. 34 lakhs to Rs. 13 lakhs in value. Export of wolfram ore rose from 250 tons to 620 tons in quantity and from Rs. 4 lakhs to Rs. 11 lakhs in value. Exports of raw rubber recorded an improvement of 0.7 million lbs. in quantity and of Rs. 2 lakhs in value. Exports of raw wool dropped from 6.1 million lbs. valued at Rs. 23 lakhs to 2.4 million lbs. valued at Rs. 9 lakhs. The exports under manganese ore improved by Rs. 3 lakhs while those under hemp raw, declined by Rs. 2 lakhs. Manufactured goods declined by Rs. 33 lakhs to Rs. 3,50 lakhs. The yardage of gunny cloth exported, rose from 97 millions to 104 millions but the value fell from Rs. 1,13 lakhs to Rs. 1,05 lakhs. The number of jute bags shipped, improved slightly from 37.1 millions to 37.6 millions but the value fell from Rs. 99 lakhs to Rs. 98 lakhs. Exports of tanned hides and skins dropped in quantity from 1,900 tons to 1,400 tons and in value from Rs. 57 lakhs to Rs. 44 lakhs. There was also a decline of Rs. 8 lakhs under opium, Rs. 6 lakhs under paraffin wax and Rs. 3 lakhs under myrobalans, while copper and cotton piecegoods improved by Rs. 2 lakhs each.

The share of the United Kingdom in imports fell from 43 per cent. in August, 1933 to 41 per cent. in August, 1934, while in exports it rose from 36 per cent. to 37 per cent. The shares of Germany, Japan and the United States in the month under report were 8, 16 and 5 per cent. respectively under imports, and 3, 11 and 7 per cent. under exports.

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months' Treasury Bills were opened on Tuesday, October 9. The total amount offered was Rs. 2,18,25,000. Tenders at Rs. 99-10-6 and above were accepted in full and those at Rs. 99-10-3 allotted approximately 66 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-6-8 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Wednesday, October 24, 1934. Successful tenderers should make payment on Friday, October 26. Other conditions are as usual.

Three months' intermediates will be sold from October 10 to 23 at Rs. 99-10-9 per cent. subject to the conditions previously announced.

Three months' intermediates sold from October 3 to 8 amounted to Rs. 1,12,75,000.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, October 10 tenders to the amount of £1,415,000 at 1s. 6 1/16d. were received and allotted approximately 70 per cent.

£1 million will be offered for tender on Wednesday, October 24 on the same conditions as previously announced.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

RAILWAY CONFERENCE

The agenda and the proceedings of the Railway Conference Association during the few years, in which the Conference has been conducted, have been such as to preclude a live and active public interest in them. But the first signs of a significant departure are visible this year. Though it is quite necessary that Railway officials should meet once a year to compare notes and discuss the purely technical problems of Railway Administration, it is very desirable that the esoteric spell of this Conference should be broken and the ways of associating the public, and particularly the commercial community, in these proceedings explored. Mr. Williamson, the President of the Conference, Sir Guthrie Russell, the Chief Commissioner of Railways, and the Hon'ble Sir Joseph Bhore have all dwelt on problems which are of general public interest ; and at certain points they have even specifically encouraged the hope that the Railway Conference will not be purely the affair of the heads of our Railway Administration.

* * *

At present, the most important technical problems are grouped round the Pope report, which, so far as we understand it, is less a body of definite recommendations than an exhortation to the Railways to pursue economies along certain paths. The public is interested in this only to the extent it can encourage the hope of reduced costs or more efficient service.

* * *

The general problems are those pertaining to the financial position of the foremost commercial concern of the taxpayer and, what is, in fact, only a part of it, the question of rates and fares. There is also the question of the classification of goods, a consideration of which will raise incidentally certain aspects of the problem of rates. The commercial community is very intimately interested in the classification ; and we pointed out at the time this question first came up that the representatives of commercial interests should be associated with the officials in every stage of the enquiry subsequent to the initial preparation of the ground by the officials. We are glad to find that there are no two opinions on this matter ; and it is to be hoped that this will only be a stepping stone to a fuller participation of the commercial community in the work of the Railway Conference.

* * *

The question of classification of goods may for the present be left to those who have both experience of the working of the present scheme and direct interest in its improvement. What concerns the country at large is the general position of the Railways and the possibility of improvement. It will be appreciated that the experiences of recent years have dispelled the old notion that the whole nation is, so to say, a *rentier* drawing a fat dividend on the investment in the Railways. And the attitude of the public now is one of looking for signs of natural improvement and, at the same time, insisting on the Administration doing all that is humanly possible to raise the Railways to the prosperity which they enjoyed before the onset of the depression. On both these points, the public is entitled to expect the Conference to throw some light ; and it is well that there has been no disappointment. Sir Guthrie Russell is quite positive that the Railways have turned the corner, though they are not exactly on a wave of prosperity. He is hopeful that within no very distant future they would once again pay their way. "The earnings," he said, "are now Rs. 2¼ crores better than they were for the same period last year, and one of the most pleasing features of the situation is that this increase had been obtained with a very small relative increase in working expenses."

* * *

We interpret all this to mean that not only the bottom had been touched but we are again going up the valley. The programme for the future can be directed, therefore, not to the arrest of a continued rot but to the acceleration of recovery. To this extent Sir Guthrie's reading of the position will be accepted readily. Equally indisputable is the fact that to make the most of an admittedly favourable situation the Railways should, on the one hand, secure the utmost economy in working expenses and on the other, endeavour to fix such rates as would not be uneconomic from the standpoint of the time and the period immediately following, and as would, at the same time, help the growth of trade. While the principles are easily stated, their application to concrete cases necessarily give rise to complications and differences of opinion. Economy and efficiency, facilities to trade and their effect on the finances of the time—these are justly juxtaposed. The Administration always lays stress on efficiency and the financial position, while the public shifts the emphasis on to economy and the potentialities of expansion of trade. Almost always differences over the application of accepted principles arise from the variation in emphasis. Happily, we are dealing with a State enterprise, in which the question of profit to groups does not loom as large as in the case of private enterprise. Even the distinction between the commercial community and the public at large, which is present in the case of freights, will, in the last resort disappear, as the public will derive the benefit of lower freights in lower prices of commodities. The problem of railway freights in India is not so much a problem of resolving the conflict of group interests as of finding just those rates which will help the expansion of traffic without imposing any immediate disabilities of a serious nature on the Railways.

* * * *

There is thus no justification for Railway officials referring, in ill-disguised petulance, to the "clamour for reduction." For those, who advocate reduction, are not clamouring for a dole to this interest or that, but are only urging the necessity of seeking a not uneconomic expansion of traffic through lower rates and fares. It is one thing to say that attempts in this direction are fraught with danger, that we can at best proceed warily and that those, who press for reduction, ought to examine its possible consequences before doing so. It is quite another to dismiss the whole talk of lower rates without consideration. In this respect Mr. Williamson showed himself in his Presidential address to be more receptive to suggestions. He quoted the Pope Committee with approval, "that too rigid a structure of rates and

fares is not a commercial asset to a railway" and that "revenue can be increased under certain conditions by reducing rates and fares and under others by increasing them." He should have added also that revenue can be decreased by increasing fares or by refraining from a reduction under certain conditions. It is this simple truth that is behind the demand for reduction ; and the Railway Administration will serve themselves and the public best by examining the rates carefully without either proclaiming their acceptance of the view or denouncing it.

* * *

From the manner in which railway officials sometimes—and Sir Joseph Bhore in this instance—have referred to the question of reduction, one is inclined to think that, if the monopolistic position of the Railways had not been undermined by the rise of motor competition, there would be little hope of the Railways examining the schedule of rates and fares. Sir Joseph Bhore for his part, has welcomed motor competition as providing the necessary spur to efficiency. The Railways, which have always claimed to be a purely commercial enterprise, have at last had the concrete test of efficient business. With the motors thrown in into the present position, the public may be said to have had a further complication. Each one of us has to view the Railway problem from three different standpoints: First as the fractional proprietor of the railways, which means the beneficiary of profits and the victim of losses which the Railways might make ; secondly, as one who pays the rates and fares ; and thirdly as a mere member of the public interested neither in rates and fares nor profits and losses but in the provision of the cheapest and the most efficient facilities of transport. The three different standpoints give rise to a conflict which is resolved only by a Hegelian synthesis. Practical policy would seek to avoid the points of sharp conflict and endeavour to proceed on sure ground. It could justly be demanded that the Railways should pay their way and that, even if they do not put money into the central exchequer, they should not live any longer on the reserves ; that the rates and fares should be such as not to strangle trade, but to help its growth, and that motor transport should not be allowed to have any unfair advantage. By proceeding on these unquestionably sound lines, progress may be made towards solving the conflict between the considerations mentioned earlier. That is, in all these matters the aim must be the removal of admitted injustices. This is particularly so in the matter of motor transport. While we are opposed to the imposition on motor transport of undeserved handicaps, it is essential that the motor buses should be made to conform to certain standards and to bear their due share of the cost of the road tracks. We are told that the provincial governments are tightening the control of motor traffic. It is, perhaps, necessary to utter the warning that regulatons should be framed from the standpoint of the public interest and not with an eye to the position of the Railways. For the Railways have every need for the spur to efficiency ; and it is not in the public interest to incapacitate the motor bus for effective competition with the Railways.

1914 AND 1934?

The assassination of King Alexander of Yugoslavia brings to a tragic close a life that hardly knew a moment's peace or security. Indeed, death has stalked closely behind the king for a long time ; and the series of attempts made on his life, he was carried off at the fourth—could not have failed to convince him that, sooner or later, he would have to pay the price for royalty which many a king before him has had to pay. The pages of European history are dark with the blood of kings and King Alexander's name goes to swell an already illustrious list.

* * * *

The details of the shocking outrage are already familiar to the readers of the daily press. We shall merely attempt briefly to recall the political and economic background of the double tragedy. The partnership in death of King Alexander and M. Barthou, the Foreign Minister of France, lends a poignant significance to a situation that was daily growing in complexity. One has a dismal foreboding that the denouement is yet to come and that the succession of assassinations—Dolfuss yesterday and Allexander to-day is but a prologue to a grim and terrible final act.

* * *

Yugoslavia is essentially a relic of the war called into being by cautious strategy and subtle diplomacy. Italy, with her eyes turned towards Dalnatia and the Adriatic, France, with her eagerness to cultivate Yugoslavia friendship in view of a rapidly growing Italy, Germany with her plans of a customs union with Austria seriously hindered by the Little Entente these are a few of the facts of an intriguing situation.

* * *

Never free from financial difficulties, the economic position of Yugoslavia became acute after the sharp fall in agricultural commodity prices in 1929. Not a little of the budgetary difficulties was the direct result of an armament expenditure far beyond the slender means of an already distressed county. This policy was prompted and supported by France because the idea of an Italy unworried by the neighbouring states never appealed to her. What with the cost of armaments growing and the prices of cereals continuing to fall, the economic and political outlook of this unhappy land became very dark, till in 1929 the

growing dissentions of the Croatians assumed the proportions of a revolution, and the hardpressed and harrassed king Alexander was compelled to proclaim a personal dictatorship. This was hardly satisfactory to France, since the possibility of serious internal disorder, which such a regime contained, was directly against her desire. France desired the military value of Yugoslavia to increase and internal political tension never enhances a country's military effectiveness. Accordingly France offered a loan of £2,400,000 to Yugoslavia to put her house in order, on condition that the personal dictatorship was changed into a constitutional dictatorship, which was done.

* * *

But the economic tension was hardly relieved even with this financial help, because it was due mainly to the agrarian situation which remained as bad ever. But in 1929, the previous tentative and defensive alliances between the three countries were consummated in a complete alliance which made the Little Entente a political and, what was more gratifying to France, a military unit.

* * *

But the internal politics of the Little Entente was by no means as tranquil as one would expect. The German scheme of a Customs Union with Austria drove a frightened Czechoslovakia to seek a common front with the other members of the Little Entente, to discover that they were by no means as united as was supposed. Rumania demurred and France hastened to put forward a scheme of a tariff union of the countries of the Little Entente and Austria Hungary with a view to creating a Danubian confederacy. She sought to placate a recalcitrant Roumania with the most forcible of all arguments—a loan. But the proposed loan did not materialise owing to the fall of M. Tardieu in May, 1932, and Italy, always on the watch, rushed to enter into a trade agreement with Roumania in August, 1932.

* * * *

But Italy has always been suspected of having one incentive to all her actions—the desire to have the peace treaties reversed. The far-sighted Dr. Benes, the Czechoslovakian Foreign Minister, alarmed by the negotiations in Rome for a Four-Power pact, ssceeded in February, 1933, in getting the countries of the Little Entente to come together in a final civil and military alliance as the "Fifth Great European Power," with a claim to a permanent seat in the Council of the League of Nations. The benefits of the alliance did not accrue to all the component states in an equal degree. Czechslovakia stands to gain rather more than Yugoslavia and Roumania and the efforts of Italy to lure Roumania away into the Italian bloc have not slackened. But for the present, the different states of the Little Entente may be said to be welded, albeit a little clumsily, into one political and military unit.

* * *

Such, it may be said, is the political and economic background of the country whose king has been so suddenly despatched into the unknown. And with him went the aged and wise Foreign Minister of France who had done so much to heal the wounds of a distraught and nervous Europe. The immediate effect of the double tragedy will, no doubt, be to intensify the internal disorders of a country which is still in the grips of severe depression. But one wonders if, with the greatest protagonist for peace in the Balkans removed from the scene, the situation will rapidly develop into a serious international disorder. One recalls a strangely similar scene in the streets of Serajevo in the summer of 1914; and on that occasion the pistol shot, which also drew royal blood, reverberated through Europe for four long years and plunged the world into darkness and chaos. Will history repeat itself or will a war surfeited Europe hasten to muffle the sound of salvoes from a fanatic's automatic with cautious diplomacy and far-sighted statesmanship?

INDIAN TEA FOR RUSSIA

Tea, one of India's major industries, after sharing in the world economic distress, is rapidly recovering through the ministration of the export restriction scheme. The trade feeling that the operation of the restriction scheme would restore the price of tea to remunerative levels has been fulfilled. The expansion of the home market has not kept pace with the revival of the industry, though the possibilities of the vast internal market are being explored more intelligently now than before. The Indian tea industry is the largest of its kind in the world, and India is the largest single supplier of the world's consumption, representing 41.8 per cent. of the world's total exports. Compared with pre-War figures, exports of Indian tea have risen considerably in recent years, principally to the United Kingdom and Canada which absorb 90 per cent. of India's shipments. The United States, one of the largest buyers of foreign tea, is catered to principally by Ceylon and Japan, India making a bad third. Java and Ceylon share the Australian market. Both in the Western and Far Eastern markets Ceylon is India's powerful competitor, with Java, Japan and the Dutch East Indies bringing up their read.

* * *

With the re-entry of Soviet Russia into the international economic sphere, an important field is thrown open to tea-growing countries. In pre-

Revolution days Russia was a good customer of India tea, and the trade has been looking forward to re-establishing the old connection. A scheme devised by the International Tea Committee aims at increasing the consumption of black tea in the countires under the Soviet Union. India, Ceylon and the Dutch East Indies are to form the nucleus of the scheme, apportioning among themselves the available market in Russia. The Committee are contemplating the formation of a private company (to be named probably the Anglo-Russian Tea Trading Company) with a nominal capital of £125,000 divided into 2,500,000 shares at 1s. each to be issued at a premium of 19s. each. On allotment 1s. per share will be paid, the premium of 19s. remaining to be called when required. Tea interests in India, Ceylon and the Dutch East Indies shall each form holding companies to be members of the proposed Corporation, participating in the proportion of the standard exports under the regulation plan. The Anglo-Russian Company will buy tea in auction in London, Amsterdam, Calcutta and Colombo and sell to Russia at the auction price plus a profit of 1 per cent. and charges and expenses, payment to be made by 12 month's sterling draft with interest at 5 per cent. To guard against default, the Government of the three creditor countries will be asked to levy cesses covering the losses if and when they occur. The guarantees will be a condition precedent to the working of the scheme.

* * *

During the Czarist regime Russia consumed 180,000,000 lb. of black tea yearly. With the stabilisation of the Five Year Plan the Russian demand has revived. The late economic disabilities of Soviet Russia stultified the demand. The International Committee's plan is to liquidate these disabilities under guarantees so that foreign tea can find in Russia a stable market. The Committee hope to deal with 40,000,000 lb. of tea a year, yearly valued at £2,500,000 at 1s. 3d. per lb. Assuming that the interests which the holding companies represent hold export rights to 75 per cent. (or 600,000,000 lb.) of the standard exports under the regulation scheme, the total risk of each individual producer will be ¼d. per pound of this quota.

THE SPANISH RIOTS

Events are moving with great swiftness across the stage of Europe and one has a feeling that history is being made at the storm centres of Europe's fateful plains. Close on the heels of one tragedy comes another and one does not know what fresh staggering news the morning papers will reveal. In the East, one of the Balkan states is stunned with the double tragedy enacted in the streets of Marseilles and in the West, Spain is in travail with one of the worst internal risings that a country with her unenviable reputation for civil disorders, has ever known.

* * *

The general strike proclaimed by the Socialist Trade Unions at the beginning of the week rapidly took a distinctly political and sanguinary turn and for a whole week murder and arson were stalking the streets of Spain. When Spain has a revolution it is always with a capital 'R' ; and in a short time the loss of life and property has assumed serious proportions. The latest reports are slightly re-assuring ; and it would appear that Senor Lerroux has, after all, succeeded in quelling the on-coming tide of a civil war. But the death-roll is already high ; and there is still no assurance that recrudescence of rioting is completely ruled out.

* * *

Strikes are a common enough occurance in any country at the present day. But the strike in Spain revealed an internal political situation that calls for serious attention. Ostensibly, the strike was in protest of the inclusion of Catholics in the Cabinet. But really the roots lie much deeper. It was the reply of the working class in Spain to the incipient, but persistent, efforts that have been made since the days of *Primo De Rivera* to induce Spain to turn Fascist. Senor Jose Maria Gil Robles, the head of the Catholic Accion Party, may be said to represent the Fascist influence in Spanish politics. He has inbibed his ideas from Mussolini and Hitler and has not the same reverence for democratic and Social insitutions that the average Spaniard has. He has a following chiefly in the agrarian areas but the working classes in the industrial towns are almost socialist to a man and they will not take anything that smacks of dictatorial tactics without a struggle. With a Dago, feeling is beleving and believing is fighting. The strike, therefore, was the outward expression of resentment of the Socialist Party in Spain to the Fascist influences which have been brought to bear on Spanish politics. The anarchists, always itching for a fight, joined forces with the Socialists to make confusion worse confounded.

* * *

The Government had to put down the rising and in doing so they appeared to be entirely united with the Catholic party. Senor Lerroux himself is a true-blue radical but to carry on the onerous duties of Government, he has to run the Cabinet on coalition lines. A coalition with the Socialists is ruled out for various reasons and he has hardly any alternative

but to join forces with the Catholics. But the socialists look askance at this alliance and they can hardly be blamed for inferring that a process of peaceful penetration of Fascist ideas into Spain is going on before their very eyes.

* * *

If the Spanish Government do not hold with Fascism—and very few Governments who have learnt the lessons of contemporary events in Fascist countries do—they should openly declare their policy. The exigencies of a stable government may require a coalition with a party with avowedly Fascist learnings but they should be on their guard lest rubbing shoulders too often with Fascism should turn them Fascists too. The riots may, for the time being, have been quelled. But they may be sure that the moment the Socialists notice a tendency on the part of the Government to move too suspiciously to the Right they will be up in arms again ; for the Dago will not turn Fascist either easily or without a struggle.

LACK OF GOOD INDIAN COTTON

Mr. Varjivandas Motilal writes:—

As a practical businessman, I feel called upon to join the cry about the lack of good Indian cotton. In spite of all the efforts of the Indian Central Cotton Committee, and the moneys spent by them, the fact remains that the quality of Indian cotton practically al over India, and especially in the South, has seriously deteriorated from the standards of the pre-War period.

* * *

The main reasons for this unhappy predicament are also equally plain, *viz.*

(1) Lack of fertilisers
(2) Lack of Good Seeds
(3) Lack of intelligent cultivation
(4) Abuses in ginning and marketing.

While the U. S. A. puts back in the soil 15 million tons of fertilizers every year, little or nothing is used in India, with the result that the soil is being impoverished even faster than the peasants. With the uneconomic prices ruling of late years and the parcelling out of lands in uneconomic small farms, the average farmer is generally too poor to afford the cost of fertilizers. As, however, the fertility of the land constitutes the real wealth of the country, it is up to the State to realize (especially in these days of Economic Planning) that its duty does not end with the mere collection of land revenue, but it should earmark a part of it to feed the goose which lays the golden egg, I mean, to enrich the land from which it derives its main source of revenue.

(1) The main methods would be the evolution of a seed which gives the best results on a given soil and then making its sowing obligatory, so that the growth of a good uniform quality of cotton may be assured for each tract.

(2) the supply of both good seeds and fertilizers to growers and making their use compulsory.

* * *

Cotton is a mass production and the price paid to the grower is determined by the bulk of the quality grown in the district. If a few farmers here and there grow better cotton, they fail to obtain a better price commensurate with their additional labour or expense with the result that there is generally no incentive to grow beter cotton. Cotton is, therefore, grown in India more or less like grass, as cheaply as possible and with as little effort as is required in the cultivation of grass; the inevitable tendency is to grow it with the minimum of effort and expense.

* * *

The downfall of King Cotton is completed by the abuses of mixing and watering in the process of ginning, pressing and marketing it. Here, again, the practice started by a few dishonest traders has spread almost like the water hyacinth in Bengal. Failing correction from within, the trade has asked for legislation to check these malpractices by the licensing of ginning and pressing factories, but the wheels of the Government in India are even slower to move than our proverbial bullock cart.

* * *

The moral of it all is that in order to make Indian cotton more easily marketable, it must be made more useful by improving its quality, fibre length and strength; cotton being a mass production, isolated efforts can lead nowhere, but an intelligent Economic Planning on a large scale is essential to success. work done by the Indian Central Cotton Committee, though useful in its own way, is not wide enough in its scope to cover the whole problem.

The latest Fibre Tests Reports of the Technological Laboratory, contain the most eloquent denunciation of the quality of Indian cotton. Below is the comparative statement of prices based in Broach Hedge contract.

Circular No. Station	1929-30	1930-31	1931-32	1932-33	1933-34
151 (11-9-34) Bijapur	... Rs. 20 on	Rs. 15 on	Rs. 3 on	Rs. 15 off	Rs. 25 off
149 (29-8-34) Bhagalcote	... ,, 25 ,,	,, 20 ,,	Par	Par	,, 15 ,,
138 (3-7-34) Westerns	... ,, 25 ,,	,, 10 ,,	Rs. 8 on	Rs. 5 off	Par
133 (25-5-34) Coomptah	... ,, 50 ,,	,, 50 ,,	,, 25 ,,	,, 10 on	Rs. 22 on
152 (11-9-34) Uplands	... ,, 50 ,,	,, 35 ,,	,, 20 ,,	,, 5 ,,	,, 5 off
148 (28-8-34) Tinnevely	... ,, 80 ,,	,, 30 ,,	,, 25 ,,	,, 40 ,,	,, 25 on

Taking Broach Hedge Contract as the fixed standard of value, the change in premium from "on" Broach to "off" Broach is commensurate with the downfall in the spinning values of the respective cotton during the last five years. In the light of these facts and figures, is it any wonder that Southern Hedge Contract, which was once quite live is now totally defunct and not dealt in by the trade in recent years? The Southern Contract guaranteed definite staple lengths and strength, which are now almost conspicuous by their absence. In fact, the actual position in pot market of Bijapur, Bhagalcote and Westerns is even worse than the figures given in the Test Reports and the bulk of the cotton sells at almost Khandesh and even Mathia prices. It is often overlooked that a few thousands bales of superior cotton grown in selected areas only serve to make more plain and painful the surrounding desert of barren cultivation.

* * *

Will the Indian Central Cotton Committee and the respective Governments of Bombay and Madras, who control the area, please enlighten the Public as to what steps, if any, have been taken by them to stop this rot in quality from year to year?

Unless prompt steps are taken to remedy this unhappy situation, one should not be surprised if Indian cotton is sold eventually at the price of hay, irrespective of any parities with American or Egyptian cottons.

* * *

The result of this policy of drift is that while in the world's cotton market, American cotton has risen from 6 cents to 13 cents per lb. (more than doubles), our least efficient cotton, *viz.* Bengal nearly 15 lacs of bales, has actually slid backwards from Rs. 160 to Rs. 130 per candy of 784 lbs. It is sometimes naively said by outsiders that India enjoys a monopoly of short staple cotton, which really means that in the world's market we back our mules against the horses of other countries Monopoly indeed! If, despite the frequent waves of patriotic fervour, our own mills find the bulk of our cotton unsuitable for their requirements, not even Ottawa Agreements and talks of good-will can induce the hard-headed Lancashire spinner to use more of the short staple Indian cotton, of which only India has an exportable surplus.

CONGRESS AND SOCIALISM

The comments which we made some time ago on Mr. Satyamurti's observations on Socialism have, we find, been misunderstood in certain quarters. And now that the elections are fast coming on we deem it necessary to explain our position lest we should do the Congress any unwitting harm. Our intention then was rather to warn our

Congressmen against the temptation to decry Socialism merely to disarm some sections of their critics or to reassure certain sections among their supporters. There is hardly any need for such tactics. The peculiar conditions of the country enable the Congress to keep back the question in the form in which it will cause dissensions among the nationalists. Congress has so far drawn its supporters freely from all classes ; and we can well sympathise with those who are anxious that no disruption of a class character should be caused at this stage of the national evolution.

But it must be recognised that an advanced popular party cannot sit on the fence for long in regard to the question of socialism. Sooner or later it will have to break with the capitalists or with the mass of workers, unless of course, our economic development proceeds on lines which will avoid class conflict altogether. It is more than doubtful if such development is possible. It is certain we shall not have the power to secure such a healthy development. In these circumstances, the best antidote to wasteful class conflict is the formation of correct ideas in the younger generation. All that we are anxious for is that Congressmen at least should do nothing to prejudice the mind of youth in what will assuredly be the crucial question of the next generation. Congress has no claim to call itself popular unless it is prepared for the odium which is almost always occasioned by allying oneself with popular causes.

If our remarks against Congressmen have not been helpful to Congress, equally are their utterances unhelpful to the people. That some of the Socialists themselves are not any better is somewhat beside the point. Nor is the undoubted popular sympathy of some of our Congressmen any extenuation of ill-considered diatribes against Socialism. Some time ago Mr. Vallabhai Patel inweighed against the habit of importing catchwords from the West. But it is not a mark of independent thought to decry socialism because the cry places Congress in a difficult position.

If the Congress is to preserve its claim to be a popular party and, what is more, if it is not to complicate our political life in the future, Congressmen should desist from dogmas on Socialism. And that is all the point of our criticism against the Congress.

(Continued from page 894)

situation of a tug-of-war between the saviour of silver and the supposed beneficiary of silver has, as a matter of fact, increased the speculative interest in the silver market and silver has touched a much higher level of prices during the week. It is believed that a very large bull position has been built up by Indian speculators in the London market.

The exchange market has been very steady during the week and the undertone is good. The rates are on the firm side ; and there is no appreciable demand for remittance. But for the assistance of the Government in providing their weekly auctions and purchases of sterling, the market would have been hard put to it to find cover. But due to the prevalence of the holiday feeling, there is complete stagnation. There are signs of the movement of the pent-up stocks of gold.

The closing rates are : 1s. 6 1/32d.. T.T. up to February ; and 1s. 6d., T.T. March-June. Inter-bank T.T. was available at 1s. 6 3/64d., up to December.

3 months Bills are quoted 1s. 6 5/32d., for October ; but banks are willing to buy at 1s. 6 1/8d., with cover at 1s. 6 1/32d.

Money conditions remained firm, call money quoting between 2½ per cent. to 3 per cent, one-month, twomonth and threemonth deposits quoting 1¼ per cent. all through. Sixmonth deposits were 1½ per cent. and twelvemonth deposits 1⅞ per cent.

BOMBAY PORT TRUST

The Trustees of the Port of Bombay invite applications from experienced and qualified Accountants for the appointment of Deputy Accountant. Preference will be given to candidates having good experience of responsible accounts and audit work in a Port, Railway or Local Administration.

The pay of the post in Rs. 900 rising by annual increments of Rs. 50 to Rs. 1,250 per mensem, plus—in the case of a Married Officer whose family is resident in Bombay and who is not occupying Port Trust quarters—a House Allowance at the rate and subject to the Rules sanctioned by the Trustees from time to time.

The selected applicant will be required to pass a medical examination, subject to which he will be appointed on probation for one year in the first instance. If considered suitable by the Trustees, he will thereafter be confirmed on the permanent staff. He will be required to subscribe to the Trustees' Provident Fund ; leave will be regulated according to the Trustees' rules, as may hereafter be amended for new entrants to their service.

Applications giving full particulars regarding age, nationality, education, accounts and business experience and qualifications, and accompanied by references and copies of testimonials, should be addressed to the Secretary, Bombay Port Trust, Bombay, and will be received up to 15th November, 1934. Applications should be marked "Appointment of Deputy Accountant."

By Order of the Trustees,
P. A. DAVIES,
Ag. Secretary.

20th September, 1934.

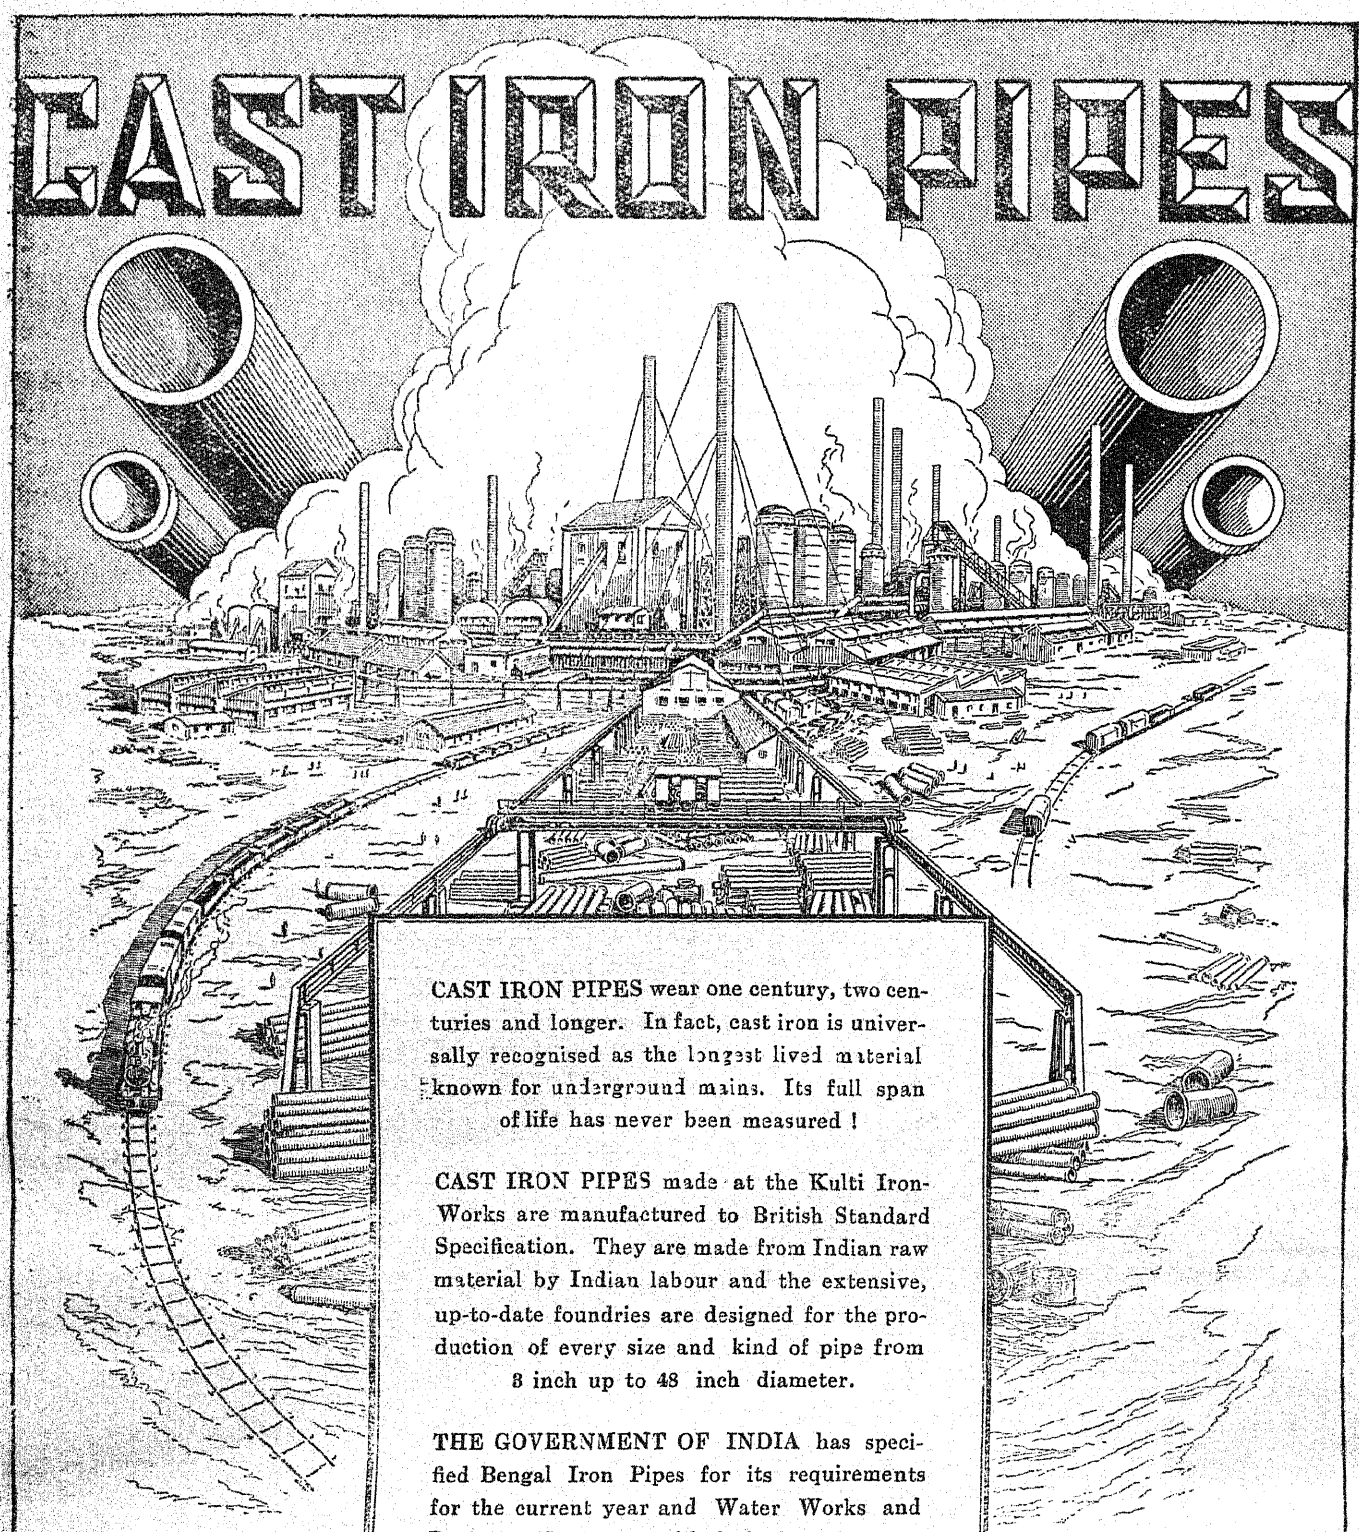
CAST IRON PIPES



CAST IRON PIPES wear one century, two centuries and longer. In fact, cast iron is universally recognised as the longest lived material known for underground mains. Its full span of life has never been measured !

CAST IRON PIPES made at the Kulti Iron-Works are manufactured to British Standard Specification. They are made from Indian raw material by Indian labour and the extensive, up-to-date foundries are designed for the production of every size and kind of pipe from 3 inch up to 48 inch diameter.

THE GOVERNMENT OF INDIA has specified Bengal Iron Pipes for its requirements for the current year and Water Works and Drainage Engineers will find that they ean obtain all their needs from the same source.

From Clive Street to Fleet Street is a big jump even in these days of flying. "Eavesdropper," who is on the high seas on his way from the former to the latter, having disappointed his readers, his much-handicapped stop-gap has to play his most difficult role. Happily, I have not to rummage for a topic. My task is done with a leap from Clive Street to Fleet Street. It is a pity that we haven't got the Indian counterpart of Fleet Street. Indian newspapers always like to refer to their contemporaries by the street in which a newspaper is housed. But geographical concentration of newspapers has not to my knowledge obtained anywhere in India. At any rate, no particular street has come to connote the world of Indian journalism. One even wonders whether there is any unity in it. The first sign of unity in this hetrogenous world is the interest displayed of late in the question of training for journalists. The Indian Journalists' Association has officially sponsored the proposal that the Calcutta University should include in its curricula a course in journalism. A deputation of journalists waited on the Vice-Chancellor ; and ere yet we could know the views of the University authorities, a controversy is raging alike about its desirability and feasibility. And as in most controversies in this country, personalities have elbowed out principles, and we have more heat than light for the public, which must, after all, be the final judge in matters of common concern. The genesis of the proposal might, perhaps, lie elsewhere than in a devotion to the public good or the good of the profession. But the suggestion has been put forward ; and it is well worth the careful consideration of one and all. It is quite understandable that some individual journalist should put forward this proposal ; for the suggestion may proceed either out of introspection, however rare, or the consciousness of the shortcomings of colleagues or with an eye to the chair which educational institutions will have to create, once they adopt the suggestion. One would normally have thought that the demand for a better class of journalists would have proceeded from other than journalists. For in their case it would have been a confession that they are themselves not quite up to the standard. And this unique combination of insight and candour is too much to expect of any class.

With the standard of Indian journalism as it has been, the most natural thing would have been for the average reader to clamour for a better class of newspapers and journals and for the proprietors to entertain only trained hands in their staff. The absence of such a demand is not difficult to understand. Without exaggerating the sense of discrimination of the public, it may be said that the average reader in India is rarely known to depend on any one paper or journal. He looks to one paper to supply news, another to mirror his own pet political prejudices and a third, perhaps to supply a general reading interest. The general lack of standard does not tell on him as it would, if he were reading only one paper ; and the majority of readers do not care for quality as a journalist or the intelligent layman understands it. In such circumstances, it is idle to expect the proprietors of newspapers to improve the staff. Very often the proprietor himself has pretensions to journalistic experience and takes the editorial helm, in which case nothing but a dwindling circulation or fleeing advertisements can help him to gauge his own worth or capacity. In India, another fatal peculiarity is that inefficient journals are not quickly forced out of business. Journals, which have outlived every semblance of usefulness, manage to linger. They take an unconsciously long time to die ; and one may say that they lack the energy even to give up the last breath.

In such conditions, there is no keen consciousness of the shortcomings of Indian journalism ; and the proposal that the Calcutta University should institute a course in journalism is welcome, if only as the first evidence to the contrary. The implications of this proposal are firstly, that Indian journalists have little or no training, and secondly, that such training can be imparted by schools and colleages. With the first everyone will be in agreement. The first generation of Indian journalists were mostly lawyers or members of other learned professions, who took to journalism as the only means of preaching the nationalism which they felt with an ardour, which is growing rarer every day in the journalistic profession. But of them, it must be said they trained themselves in the course of their work ; and judged by the standards of the times in which they lived and the resources they had at their command, they acquitted themselves with great credit Men, who had worked under, and with, the pioneers, also caught their spirit and learned the tricks of the trade. But the dynasty did not last for more than two or three generations. It was not long before the fire of ardent nationalism ceased to animate the proprietor or inspire the editors. And what was lacking in moral fervour was never made up in technical efficiency. A careful study of Indian Newspapers during the last ten years will show an imbecile oscillation between these two rival ideals. On the one hand, efficiency was impossible in most cases because there was no striving for it, and in some cases difficult owing to the cost of competent staff or up-to-date equipment. On the other, it was dangerous to

affect the tone of ardent, reckless nationalism. There have been many who like moths have perished in this strangely fascinating flame. They, no doubt, like to regard themselves as heroes and congratulate themselves on their heroism. But it is to be wondered whether in some at least of such cases, the crown of thorns has not come through sheer carelessness of penmanship.

But all this is beside the point. What I seek to emphasise is that the ideal of efficiency has never found its place in Indian journalism. Most of us are content with laurels which originate more in the imbecility of others than in our own positive strength. There is not that sense of keen competition which keeps men in trim and nerves them to great efforts. Too often it is a competition in the lowering of standards.

It is not in place to plead the numerous handicaps. Granted that there are handicaps, that Indian papers do not, generally speaking, get their proper share of the sinews of journalism, viz., advertisement, either from the Government or the business concerns, that they have often to run the gauntlet of the Press Law and drop a lot of money in the courts, it still behoves us to ask whether we have striven for the best that we are capable of. After all, achievement is, necessarily, relative to means; and no one will fall foul with Indian newspapers, if they have made the most of what little resources they have. There are but few papers which can put a stout claim to achievement judged by this standard. Without being invidious, it may be said that *the Hindu* of Madras and lately *the Patrika* in Calcutta have striven for the best and achieved much. But who will question that there is a lot more to be done? If the entire body of Indian newspapers is to move along that line, the *personnel* of Indian journalism has to be improved a great deal. And it is, as I said earlier, as an evidence of this longing that I give the publicity of these columns to the present movement.

And now to the merits of the particular proposal that the University should include a course in journalism among its curricula. My friend, Mr. Amal Home, the talented Editor of the *Calcutta Municipal Gazette,* has not felt attracted to the proposal . In a letter to the *Statesman,* the quality of whicm proclaims the claim. of the author to pronounce on the worth of his colleagues in the profession, Mr. Home questions the efficacy of University teaching for practical journalism. His point has only to be mentioned to be understood. Journalists are not poets. They are not born, but, largely made. But where? Not in the class-room, but in the rough and tumble, the bustle, the hurry and scurry of a newspaper office, where men and things alike are always on the move, where even the pontific Editor or the leader-writer has to admit that time is the essence of journalism as of contract.

To this, no one can demur. A school-bred journalist is like a hot-house plant doomed to wither in the Sun, and to live in perpetual dread of the open air. No instruction, which a school can impart could make up for the practical training which the newspaper can afford.

But what is the bearing of this truth on our problem? We are agreed that for a journalist training is essential; and the question is how such training can be provided. If schools cannot turn out perfect journalists, the other alternative, training in an office, is also in the present conditions equally inadequate. Mr. Home aptly refers to training in Indian newspaper offices as an instance of blind leading the blind. What then is the course to be pursued?

I am sure it would be much more useful to consider the place of education in professional efficiency than to debate the question whether schools can be turned into a manufactory of journalists. I am afraid Mr. Home has altogether forgotten to consider the question from this aspect. Journalism is not only a profession, but a learned profession. There is no learned profession in which the practitioners have emerged full-fledged from the school or college. Law, Medicine, Teaching itself, all these furnish adequate instances of the distinction between learning and training and the immense advantages of blending the two. And I for my part, do not see where and how journalism is different. Except that the criticism of the proposed University course comes from one whose learning I know first hand, I should be tempted to say unkind things. The bane of journalism in this country is that it is dominated by men who got even the pretensions to learning only late in life. However much we may be in love with the unctuous phrase, the School of Life, there is one respect in which life is dangerously different from the school. The School of Life as most people love to call it, mixes the poison of cynical sophistication with the milk of learning. And what distinguishes a profession from a trade or a craft is the clear sense of service; and by sense of service, I mean the appreciation of the nobility of

OLYMPUS

(FROM OUR CORRESPONDENT)

Simla, October 8.

When you see piles of boxes labelled "Office Records" besetting your path everywhere you know that your eavesdropping days are ended. Simla is emptying rapidly and in another fortnight the military officers will be left in sole and, perhaps, dreary charge of the town. For, however, paradoxical it may sound, the Army Headquarter's permanent home is Simla while that of the Civil Secretariat is Delhi! Only Camp Offices of the Army Headquarters move down to Delhi and the chosen few who have to move down get fat allowances. The Civil Secretariat Officers do even better. They move up to Simla bodily and call it "Camp Office" and all of them get their allowances! The military authorities have been up against this "injustice" but the civil departments, having the last word, the army people have been kept down as "inferior" workers. And now the Army people have turned on the civilians with a vengeance. They have decreed that clerical appointments in the Army Headquarters shall not be filled by civilians which means that under this pretext, Indianisation of the A. H. Q. shall come to a stop! How thrilling is this battle of loaves and fishes.

* * *

I have rarely touched on Simla's trading life but I was agreeably surprised to find yesterday that, at their Annual General Meeting, the Simla Trades Association said many sensible things which have an all-India aspect. Their President, Mr. Shadi Ram Mohindra, Proprietor of Friend & Co., made the suggestion that traders feel very annoyed with attempts at Trade Pacts and Agreements.

* * *

His argument is understandable. Says he: These Pacts and Agreements interfere with the normal channels of trade and have a very serious effect on them. The less there is of interference of this kind, the better. As a consequence the traders of Simla found, one fine morning, that they had to cancel their contracts with Continental firms and stood scratching their heads to find out whether to divert these orders.

* * *

Suddenly they found that buyers of different lands had different tastes and that these could not be catered to at a moment's notice by sellers in another country. The result was dislocation of trade and once it occurred, there was no getting back to the happy balance of trade, so suddenly and rudely shaken. And this added to the immense difficulties already caused by the Lee Commission which made it cheaper for Europeans to go abroad to spend their holidays, than for Indians.

* * *

Mr. Mohindra raised another most significant point. In the present state of depression he felt that octroi duty must go. This duty is an old relic and is a great impediment to internal trade. He urged its abolition all over India as a very desirable step towards giving an impetus to trade. He is right. Sir Basil Blackett, in the first flush of enthusiasm on his assuming Finance Membership in India, made a similar declaration, but it died a quick death and was not resurrected.

* * *

The point is important and worth investigating. If only big commercial houses know what it would mean to their trade if the octroi were removed they would give up all other work and concentrate on it and move the Associated Chambers to take a deputation to the Finance Member. There is no greater impediment to trade in India than octroi duty, which you have to pay every 10 miles, on an average. In no part of the world does such a state of affairs exist.

* * *

It is true that, as in other cases, the financial aspect of the matter presents almost insurmountable difficulties, but I daresay some solution would be forthcoming if serious attention were paid to it. Let the subject be specially debated on and alternatives of compensating the loss in revenue be considered. Mr. Shadi Ram Mohindra has rendered a public service by bringing this question to the notice of the authorities and I hope Sir James Grigg will give his special attention to it.

* * *

Another question of All-India interest raised in the Presidential Address related to Industrial Fairs. Just as this country is suffering from quite a number of parasites who are battening on financial fraud, so has the infection of "Industrial Fairs" caught on as a money-making device. Simla has seen such Fairs in the last two years and the result has been that the retail trader has been very hard hit. These Fairs are not meant to encourage Swadeshism but to yield handsome profits to their promoters

* * *

I wonder if any law can touch them. The trick they employ is this: they keep account books ; they do not show profits for, whatever these are, they are distributed to charities at the bidding of some big people. But the mischief is done in that the organizers are themselves financial operators and they annex, in the form of their own salaries and allowances, enough to satisfy their greed. I think it is time that Members of Government and Ministers who are prevailed upon to open these Exhibitions and lend them their patronage, should do so with their eyes open and not help the men behind the organization to reap profits at public expense.

* * *

One principle can, at any rate, be observed more or less uniformally. Wherever there is whole-sale and retail trade, an Exhibition may be allowed to sell goods, but in towns where traders do only retail business and pay heavy rents and taxes, it is a crime to allow an Exhibition to sell goods thereby depriving the local traders of their custom. Here again I think that Mr. Mohindra has sounded a note of warning which should find an all-India echo.

* * *

The Annual Meeting of the Railway Conference Association is now on. Its proceedings are not at all inspiring and even the promise of better times does not enthuse one. The Railways are just "drifting" and I wonder if ever it will have a leader who will look ahead and plan well. Sir Joseph Bhore has been the Railway Member for three years. He is retiring next March. The Railway administration has had no trouble, as, though a believer in the principle of Indianisation, Sir Joseph always relented in "special cases" and the Secretariat knows how to make out these cases! Sir Joseph cannot therefore be accused of having, as the first Indian Member for Railways, done anything to Indianise the Railway Board or the administration of Railways.

* * *

Sir James Grigg is visiting Bombay early in November. I expect he will do this to discuss certain details about the Reserve Bank on the spot. Bombay is to be the chief centre of the Bank's activity and he may get round him the would-be Deputy Governor of the Bank and the would-be Directors and have a long talk.

SOUTH INDIA

DROUGHT, MENTAL AND PHYSICAL

(From Our Correspondent)

Madras, Oct. 8.

The conscience of the Government of Madras in regard to elementary education, never altogether easy, has now been stirred. This is hardly surprising, as the Government cannot miss the incongruity of the appalling illiteracy of the people and all this specious talk of rural development and industrial expansion. Whatever the problem of popular uplift, we are brought up against the huge obstacle of the lack of education and it is therefore time that more serious and more determined, not to say, more sincere efforts should be made to spread education amongst the people. The Government, for their part, should be ready to make such changes in the existing procedure as experience reveals to be necessary. We have at present a half-hearted and altogether inadequate attempt at popular education, which is known by courtesy as compulsory education. The element of compulsion is hard to find, even if one were to search for it with a Diogenes' lamp in one's hand. The Madras Elementary Education Act of 1920, together with the amendments made thereon in 1932 and later, only provides for local boards exercising a degree of compulsion on the children of the locality. And they are also empowered to levy an educational cess, which would be indispensable, if any local board should suddenly grow enthusiastic on the question of primary education.

The two important features of the scheme incorporated in the Elementary Education Act are: the power to levy the cess and the power to compel children to attend schools. No one acquainted with conditions in this part of the country would suspect that the local boards are at all anxious to exercise these powers. The local authorities would not willingly risk the odium of increasing the local levies. Nor would they, once the levies and the so-called system of compulsory education are introduced, enforce attendance by directing the prosecution, and securing the punishment, of parents who wish to perpetuate a dynasty of illiteracy. The Attendance Committees, which were charged under the Act with the duty of enforcing compulsion, so to say, have consistently shied at their task. The result has been that children, who have been coaxed or coerced into entering the portals of a school, have not stayed there long. There is not much love lost between them and literacy ; and what little they learn at school during their short sojourn there they unlearn in far less time. Though from the standpoint of each child and parent there is nothing lost to the community at large, it means that the money so far spent is sheer waste and, what is more, the prospect of removing illiteracy is farther on the horizon.

Thanks to these attempts at once ill-conceived and inadequate, we have now two problems where formerly there was one. The question arises whether the efforts ought to be directed to the spread of education in the sense of bringing every boy into the school or whether the authorities ought to pursue and reclaim every truant in the locality. It should perhaps be explained here that by "truant" is meant the little genius who rates his native wit higher than the three R's and makes his escape as soon as he can from the depressing atmosphere of the village school into the delectable land where one's natural gifts are not clouded by man-made letters and figures. The Hartog Committee inclined to the view that the schools should endeavour rather to keep what they have, than to reach out for fresh conquests. One might see in this the drab economic sense of our Governments and Committees asserting itself. For to prefer intensive education to the extensive, laudable as it is, is only an expression of the desire to prevent the wastage caused by children straying into school for sometime under compulsion and straying out as soon as the pressure is relaxed.

Whether or not the attempt to keep the children long at school will interfere with the spread of education, it is certainly necessary that the wastage should be prevented. The amendment of the Elementary Education Act which the Government of Madras published early last week should, in principle, have the support of the public. It is proposed to make it obligatory on the Chairmen of Municipal Councils and Presidents of District Boards to impose a penalty on all parents whose children, having once gone there, did not remain at school until the termination of their school-going age. Though this provision looks simple as it is stated above, it would not seem to be quite practicable on a careful scrutiny. It is to be wondered whether the authors of the proposed legislation have endeavoured to enquire into the causes of this phenomenon of truancy on a mass scale. There is, no doubt, the fact that the fondness, with which the ignorant cling to their ignorance is at least as much as the pride with which the learned parade their learning. But there is an economic incentive behind this exodus from schools. If parents take away children from schools, for which they do not directly or consciously pay, it is because the children are able to supplement the earning of their parents ; and if the new penalties proposed are to have a deterrent effect the amount of the fine has to be in excess of what the parent might expect the child to earn over a period. Such penalities would verge on the drastic ; and it is more than doubtful if measures of this kind will secure the requisite popular sanction and support. All this criticism notwithstanding, it must be admitted that attempts should be made to prevent social wastage caused by such premature truancy, if one might call it so, and to make sure that for every step we take forward we are not thrown back two.

From mental to physical drought. South India, and especially the district of Coimbatore and the areas adjacent to Mysore, are under the cloud— I was going to say "the cloud of a drought" and realised that the metaphor was never more antithetic than in this context. For the trouble in South India is that there is hardly any cloud to be seen on the horizon. There is fear of a complete failure of crop if there should be no relief for a few weeks more. And as a result of this fear groundnuts particularly have gone up considerably in value. Our old friend, Siamese rice, has reared his head again ; and increased imports are reported, by persons who feel that the drought might result in a shortage of the supply of rice. Of late, we have been developing the habit of instituting a comparison on every conceivable occasion between conditions in America and conditions in India ; and it is significant that the most striking difference should manifest itself now. While in America the drought is far from being an unmixed curse owing to the reduction in the stocks and the rise in prices which it makes possible, in India the harmful effects of the drought will not be mitigated at all. How can the peasant be benefited if he is to buy his requirements of food like any industrial worker in the city would have to with the difference that, while the latter has money to buy it with, the former has none of it himself.

An important development of the week under review is the breakdown of the negotiations between the Governments of Madras, Hyderabad, Bombay and Mysore for a settlement of the question of their respective share of the waters of the Tungabhadra. The Tungabhadra is a unique instance of a river over the waters of which four different governments have a claim. Of the four, the Madras, Mysore and Hyderabad governments have plans for executing irrigation on the strength of the waters that would be made available by a more economic use of the Tungabhadra supplies. But it is obvious that none of the three governments can proceed with their respective projects, unless it is

THE GATEWAY OF INDIA

(From Our Correspondent)

Tuesday, September 26.

The reporter of a purely commercial journal envies the lot of the more fortunate members of his profession who have more freedom to include politics in their purview. With the Congress approaching nearer and nearer every day, a reported of a political paper is surfeited with materials to write on. A mere description of the rapidly growing Congress city would comfortably filll a large portion of his quota for the paper he sherves. We, unfortunate economic reporters have to be satisfied with the crumbs in the shape of economic news that a politically-minded Bombay throws our way during the hectic days preceding a congress session. No doubt in a long view there is an economic aspect of even the most intensely political problem. But we are only concerned with the events passing and in that respect Bombay is a poor hunting ground for a purely economic journalist.

In the absence even of a session of the legislative Assembly, a perennial source of fun and news, one must needs fall back on that other incentive to journalistic exuberance—the Municipal Corporation. The question of providing facilities for attracting tourists in large numbers to the gateway city and of creating a municipal tourist bureau was considered at a meeting of the Bombay Corporation on Friday. As usual the question was referred to a committee who were asked to consider the problem and submit a report.

The task of moving the resolution was entrusted to Sir Jehangir Boman-Behram who drew the attention of the house to the fact that an increased tourist traffic to the city from within the country and outside was likely to increase the trade and prosperity of Bombay and thereby enhance the income of the Municipality. The resolution was opposed on the ground that the opening of a new tourist traffic fell outside the jurisdiction of the municipality and also because the benefits which an increased traffic might confer to Bombay would probably go to the Government instead of to the Municipality. The resolution however was carried. Sir Jehangir had less luck with his second resolution in which he asked for a committee to consider whether it was not desirable to make Bombay the principal airport in India. So that the air services to all parts of India might radiate from the city. It was an ambitious resolution in as much as it contained a request to transfer the airship mooring mast from Karachi to Bombay so that the city might be made the first port of call for the airship service in the East. The question of a suitable aerodrome site on the Back Bay Reclamation area is an old and highly controversial one. And Sir Jehangir should not be surprised at the failure of the house to support him. There is already a keen rivalry between important cities for claiming the pride of place as an Eastern airport and the problem will hardly be solved at a peaceful meeting of the Bombay Corporation.

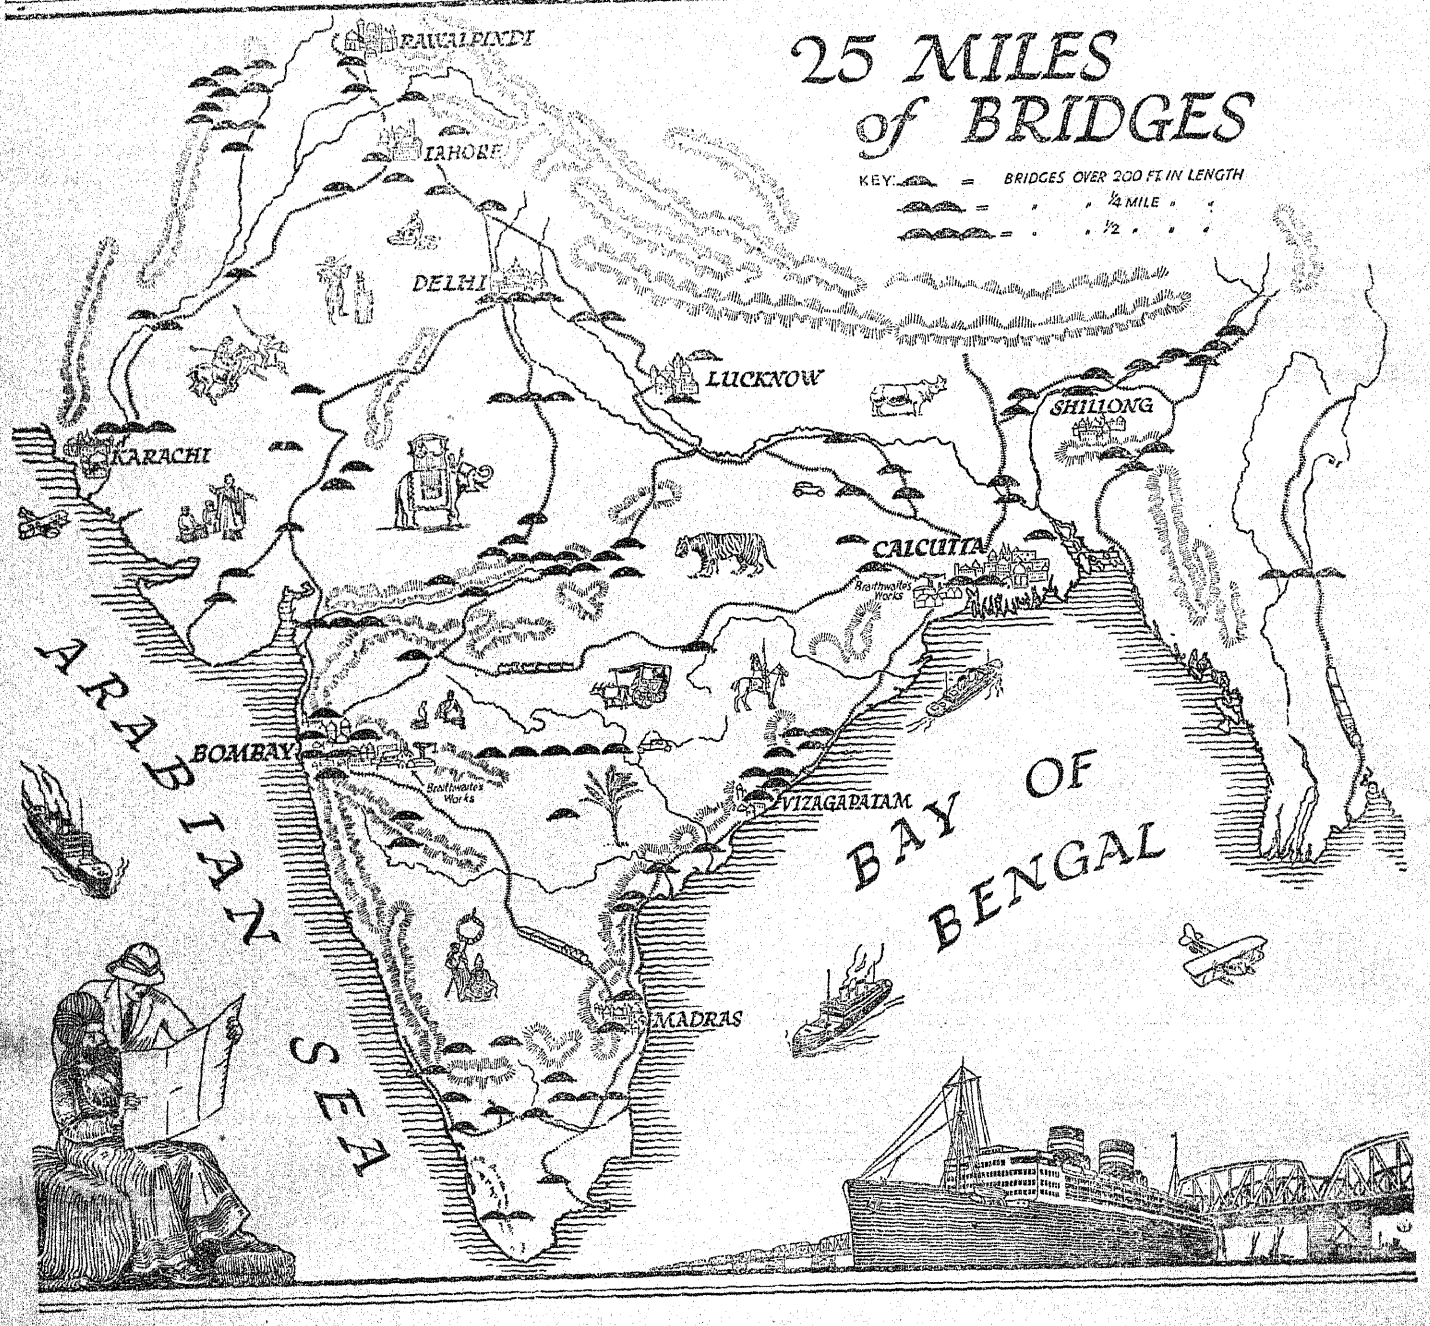
At the beginning of the week the old and thorny problem of adjournment of the corporation session cropped up again. On Monday an adjournment was sought as a mark of respect to the memory of Mr. F. S. Talyarkhan who was a member of the corporation for a period of three years a few years ago. On Tuesday the ground was the anniversary of the death of the first Caliph of Islam. It was the unenviable lot of Mr. L. R. Tairsee to oppose both the motions. Mr. Tairsee pointed out on the first day that it was against established convention to adjourn to mark the decease of a non-sitting member. On Tuesday he was more emphatic in his protest. Once the principle of adjournment on religious consideration was accepted it would be extremely difficult to carry on the work of the corporation. There is not a day on the calendar but is sacred to some community or other and the corporation could hardly expect to meet on any one of the 365 days without wounding the religious susceptibilities of some section or other. Mr. Tairsee may have sounded strangely heretical but one cannot help admitting that there is a great deal of logic in his contention.

The natural sources of material of an economic article are so quickly exhausted that one must needs fall back on the supernatural for help. Bombay luckily provided during the week under review a faint compensation to the economic reporter in the shape of mysterious and supernatural happenings at Dhana Bandar on Saturday night. According to this story, which is not yet proved to be the piffle that such stories usually are, there appears to have been a downpour of rice for nearly five hours in six tenements on the second floor of a building. The tenants, untutored in the economic possibilities of a free shower of rice in these days of severe depression grew uneasy and spent many wakeful hours. They even went to the length of trying to exercise the evil spirit that was attempting this very pleasant method of a deluge. Whether due to the incantations of the medicine-men or whether the aerial stock of rice was depleted one cannot say ; but this very pleasant phenomenon has ceased. What a tragic irony of fate that the people of a country groaning under the weight of poverty should yet resent a literal windfall in the shape of aerial rice.

(*Continued from page 921*)

definitely known what amount of water would be left free for the use of each of them. To settle this vexed question a conference was held early in October at Bangalore ; and it would appear that the representatives of the four governments made totally conflicting claims. The Mysore Government have been the first to prepare a project in this regard. But they do not appear prepared to modify their claims in the light of the representations made by the Hyderabad and the Madras governments. Though full reports of the proceedings are not yet available, it seems to be agreed on all hands that, while Madras and the Hyderabad governments are prepared to tone down their claims, the Mysore government shows no similar spirit of accommodation. The result is a complete deadlock ; and there has been no attempt on the part of any of these governments to disguise the fact that the conference has broken down. It is believed that as all the four governments are subject to, though in varying degrees, to the Government of India, an appeal would at last be made to the Central Government and the Paramount Power. As Native States are involved, it might be necessary to take the matter up to the Secretary of State. The question is not very complicated, as what is required is only a fair apportionment of the available supplies as among the four different governments. An impartial award on the part of the Paramount Power should occasion no difficulty of acceptance.

The threat of a diversion of trade, which was Bombay's peculiar privilege some months ago, seems to have affected Madras also. The commercial community of this city apprehend that, owing to the rise of important ports on the Eastern Coast, which may be presumed to be more up to date because they have been opened up much later, the trade of Madras stands in danger of being diverted to these new centres. The South Indian Chamber of Commerce has impressed upon the Port Trust authorities the necessity of reducing the various levies of the Port to safeguard a position which might become untenable any day. At present the movement has not gathered force ; and it remains to be seen whether the Port Trust takes the same grave view or whether, if is does, it will show a readiness to forestall the coming danger.



On the map are shown the 116 most important bridges out of the 196 which Braithwaites have built in INDIA between 1923 aud 1932.

MINERAL WEALTH OF EGYPT

LARGE AREAS STILL UNPROSPECTED

OPPORTUNITIES FOR PROFITABLE INVESTMENT

BY V. T. NEELAKANTAN

The area of Egypt is approximately 1,002,000 square kilometres, of which 32,000 square kilometres in the delta and valley of the Nile are cultivated. The remaining 970,000 square kilometres are accounted for by the peninsula of Sinai and by the desert areas stretching to the east and west of the Nile, which are waterless and mainly devoid of vegetation. It is in these vast desert solitudes that the mineral wealth of Egypt lies.

The workable deposits which have so far been discovered are few in comparison with the size of the desert area, for Egypt cannot be described as a highly mineralised country so far as the better known minerals are concerned. Large tracts, however, are still unprospected, and it is probable that further discoveries may be made which may bring to light not only other deposits of these, but also of some of the lesser known minerals whose commercial value is being revealed in the progress of science. The principal minerals produced in Egypt are petroleum, manganiferous iron ore, phosphate, gold, lead, zinc, periodot, salt, sulphates and carbonates of soda, iron oxide, ochres, and clay. There are other minerals, but up to the present time they have not been found in deposits of sufficient value to permit of their profitable extraction. These are nickel, copper, chronite, talc, beryl-emerald, turqwise, amethyst, sulphur, barytes, calestine, sulphate of alumina, sulphate of magnesia, nitrate shale and molybdenite.

Quarrying Industry

Petroleum is refined locally, whilst manganiferous iron ore and phosphate, a part of which is ground in Egypt, are both exported in the raw state. An extensive quarrying industry, carried on by local enterprise, supplies Egypt with stone for building and roadmaking. There are also factories making cement, a factory making pigments from local raw material, another producing bricks, tiles, drain pipes and ceramic ware, and a large native pottery industry. Gypsum, which is widely distributed in Egypt, is manufactured into plaster on a large scale.

The factors of distance and difficulty of transport have until recently retarded the progress and development of the known mineral deposits, except in the neighbourhood of the Nile or the Red Sea, and this applies especially to bulky products which cannot be concentrated at their source. But the appearance of motor transport on the desert routes is helping to applies especially to bulky products which cannot be able to have products that are available in a concentrated form conveyed to river or railway.

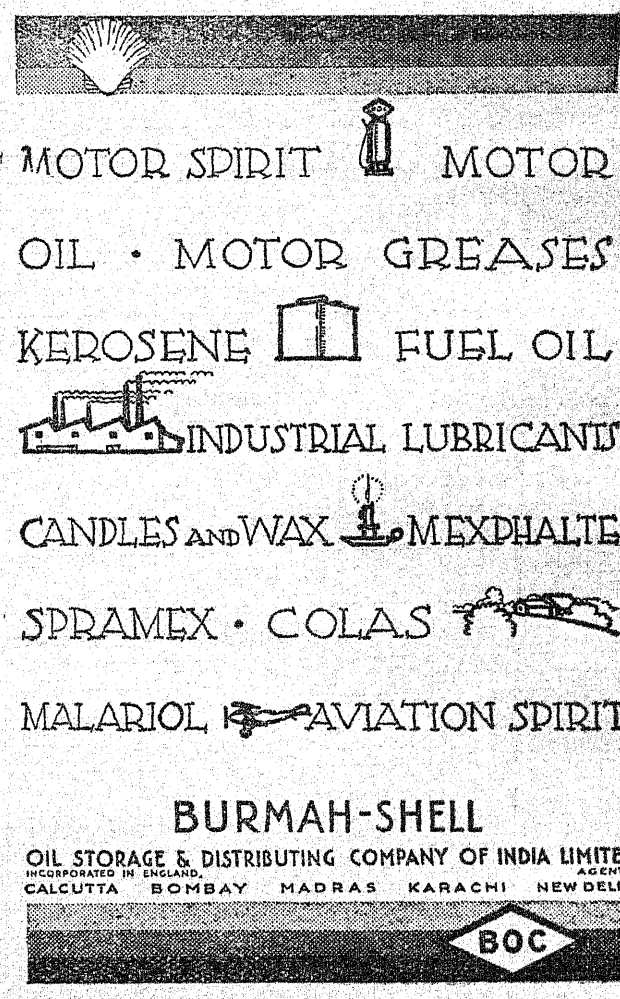
Huge Concessions

The result of the outburst of speculative activity in the closing years of the last century was a system of granting huge concessions embracing practically the whole country. The main attraction for these speculative ventures was the gold intermittently worked by the ancient Egyptians, and later by the Ptolemaic kings, and the Arabs, in mines which have been investigated by various expeditions since the reign of Mohammed Ali Pasha (1811-1848). This concession system was long ago replaced by a regular system of licensing and leasing, granting prospecting rights with powers to lease restricted areas, whilst maintaining the principle of free exploration. The policy of the Government during the evolution of the present system of mining control has been to encourage and facilitate the development of Egypt's mineral resources and to attract to the country a flow of foreign capital and expert ability by granting terms as generous as possible.

Under the system now in force the areas for prospecting and leasing are liberal in size, the fees for prospecting licenses being £100 a year for petroleum and £25 a year for other minerals. The lease periods are fixed on a scale suited to commercial needs, while the rents for mining leases are dead rents merging into royalties, and are fixed at £1 an acre for petroleum and stratified deposits and £2 an acre for lode deposits. The royalty for petroleum, payable in cash or in kind, is 12½ per cent., which under special circumstances the Government may raise to an amount not exceeding 25 per cent. For other minerals there is a royalty of from 2 per cent. to 5 per cent. on the value of the mineral at the pit's mouth.

Upward Tendency

During recent years there has been a revival of foreign enterprise in mining in Egypt, accompanied by an awakening of local interest, and production is showing an upward tendency. The application of the science of geo-physics, it is hoped, will prove of value to the industry, here as elsewhere. Also, the sending of young Egyptians to other countries for the study of mining in its various branches cannot but be of value, and may be the starting-point of the exploitations by Egyptians of Egypt's minerals.



OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

LAUNCHING OF THE 'QUEEN MARY'

My report this week must commence with a reference to the launching of "the stateliest ship in being." It is seldom that the practical sagacity of a Britisher is tinged with sentiment. And it is, perhaps, in the fitness of things that a maritime nation should make the launching of a giant merchantman the occasion to work itself to almost a patriotic fervour. It cannot be denied that the occasion contained numerous appeals to more tender feelings than mere business acumen. In the first place, it was for the first time in the history of shipping that the King and Queen have participated in the christening ceremony of a merchant vessel. Secondly, it must be very flattering to the pride of a nation to build and to launch successfully the biggest liner in the world. The short, but impassioned, speech of His Majesty was a direct appeal to the sentiments of his hearers, and as the monster floating city slid noiselessly on to the waters of the Clyde to the accompaniment of the second national anthem "Rule Britannia," the numerous spectators who had trooped out in the pouring rain to witness the launching must have been stirred to their depths.

But there is a more practical and dispassionate way of looking at the whole thing. Filching the blue riband of the Atlantic may be in itself a just ambition for any nation. To become the proud possessor of the stateliest ship afloat may be a sufficient incentive to national endeavour. But these ends in themselves do not justify the stupendous energy and capital spent on the "Queen Mary" and earmarked for the sister ship that is in contemplation. Transatlantic traffic has not assumed such gigantic proportions as to warrant the economic running of a number of such costly liners. The entire volume of traffic that there is today might, perhaps, just repay the enormous investment; but rivalry over the transatlantic traffic is so keen that no nation is allowed to enjoy supremacy here for long. As soon as one nation steals a march over the rest, with either a giant liner that breaks all previous records, or with another that offers greater advantages and comforts during the voyage, the other nations proceed to undo the advantage by building faster boats and statelier floating palaces. How long Great Britain will retain the undoubted advantage she has now acquired is, therefore, a matter for speculation. It does not necessarily follow that she will be allowed to absorb all, or even the lion's share, of what traffic there is between England and America. The whole enterprise, therefore, partakes of the nature of a bold speculation. But the faith that allowed such an enormous speculation to be undertaken is, perhaps, well worth any shortage in achievement.

The Coal dispute.

The British authorities are developing a flair for successful mediation in disputes, which had come to be considered as the special prerogative of President Roosevelt. The latter's magnetic personality has, time and again, triumphed over the most hopeless situations arising out of trade disputes. It has, perhaps, evoked the silent envy of the British authorities who could not reproduce the same force of personality. They have, therefore relied, often with deplorable results, on administrative authority and the much-boomed sense of justice of the British.

But for once administrative interference has successfully averted a serious situation. Mr. Ernest Brown, the Minister of Mines, after long hours of negotiations, succeeded in temporarily averting a serious stoppage in the coal industry, which was beginning to loom larger and larger in Britain's industrial horizon. A compromise agreement was arrived at on September 27, according to which the representatives of both sides have agreed to recommend their principals to accept the proposals put forward by Mr. Ernest Brown. The proposal is that Mr. Brown should select three individuals to act as arbitrators in the dispute, and that although they should not be connected directly with the industry, they should have a working knowledge of it. Their findings would be binding; and if they include an increase in wages, such increase is to have retrospective effect as from October 1. In the meantime existing rates of wages are to continue.

It is fervently hoped in all quarters that this will eventually lead to an end of the dispute. It is too ridiculous to imagine that either party belittles the consequences of a coal strike. It is equally bewildering why, if they realise what a failure to settle the dispute would mean, they still adhere to every little detail of their claim with such obstinacy. Let us hope that the Yankee way of settling disputes at the eleventh hour without any disastrous consequences has come to stay in England.

National Debt.

The National Debt position of Great Britain can hardly be said to have improved at the same rate as in some other directions of her internal economies. On March 31, 1934, the National Debt stood at £7,822,298,060 or an increase of £178,504,526 over the figure of March 31, 1933. Cash receipts of £220,529,968, created fresh debts to the extent of £229,913,388. The principal item in this was the 2½ per cent. conversion loan for which cash accounted for £158,546,078. Debt redeemed for cash amounted to £60,494,933 and there was an increase of £9,086,071 by conversion operations.

The principal figures for the past year were:—

	£
Fund debt ...	... 3,374,336,861
Unfunded debt—	
Floating ...	... 844,710,000
Other ...	... 2,554,638,869
External ...	... 1,036,545,184

The external debt total is the lowest since 1917.

Other capital liabilities total £208,064,507 bringing the aggregate liabilities of the State to £8,030,362,567. There are asset totalling £618,159,370.

No "House" on Saturdays.

The House Committee of the Stock Exchange have announced that the Stock Exchange will be closed on Saturdays. The last Saturday session was on May 26. And since then the policy of keeping the 'House' closed on Saturdays has been extended without a break up to the first Saturday of October. And now it has been decided to keep the Stock Exchange closed on Saturdays *sine die*. The decision was made in consideration of the very restricted market which exists on Saturday mornings and the consequent potential danger to British credit. It may be recalled that the decision to resume Saturday sessions in September 1931 coincided with the startling collapse of the Gold Standard and the severest landslide in giltedge that the market has ever experienced. It has been since noticed that there is very little disposition on the part of banking houses or other big financial interests to do big business on Saturdays. And instances are known where orders emanating from banking houses have been left with special instructions that the deal was not to be put through until Monday. It is, therefore, hardly surprising that the decision to remain closed on Saturdays was arrived at by an immense majority of 1,800 to 254. Since the decision is to close the Exchange *sine die*, it should mean that the authorities are free to resume Saturday sessions whenever business warrants it. But at the moment of writing it is difficult to visualise sufficient improvement in the briskness of business to lead to Saturday 'houses' in the near future. It may, on the other hand, be expected that the provincial exchanges will follow the example of the London Exchange.

Air Mail Week

U. S. A.

EXIT—GENERAL JOHNSON

The end of the textile strike and the resignation of General Johnson are the only two events that invest the week with some importance. It was pointed out from a long time ahead in these columns that, however hopeless the strike situation might be otherwise, there was not much reason to fear that either the civil peace of the country or the prospects of the Recovery Administration, would be permanently prejudiced by a prolonged conflict between labour and capital in the American textile industry. It was assumed with a confidence, that is normally indefensible, that ultimately the President would be able by a personal appeal to the combatants to bring about a truce and then in the less disturbed atmosphere created thereby, a lasting settlement. The week has shown how reasonable were the expectations. The President's personality has again triumphed over the apparently intractable facts of the labour situation. It might be wondered whether a President, possessed of such a powerful personality, could not have intervened at an earlier stage and avoided all the rancour and the bloodshed that have been caused during the last few weeks. But it should not be difficult to understand that even for the exertion of the influence of a magnetic personality, there is such a thing as an opportune moment. Before the President makes an appeal the people must have reason to feel convinced that he has the data on which to make a preliminary judgement ; and for such date Mr. Roosevelt has had to wait for the report of the Board of Arbitration. Once the report was in his hands, he was able to study the questions and to form, in his own mind, a general idea of the settlement that he would invite the contending parties to consider. It is not suggested that the President has made final conclusions or that some difficulty will not be experienced in bringing about the final settlement. But the people, and particularly labour, knows now the general character of the President's ultimate findings.

End of Textile Strike

From all accounts it would appear that the President has inclined more and more to the side of labour. It is well-known that the point at issue is the interpretation of clause 7 (A) of the National Recovery Act. The issues arising from this section have presented themselves on earlier occasions and notably in the case of the motor and steel codes ; and though on all those occasions the solution favoured by the President was a mere compromise, the compromise was not as much in favour of labour as the workers or their leaders might desire. It explains the constant reference of the labour leaders to "the unjust structure of the N.R.A."; and when the cotton textile strike was first declared it was made clear by the labour leaders that their aim was not only to redress the grievances of the workers in their own trade but also to secure a revision of the general provisions of the N. R. A., as affecting the labour clauses. And whether or not the final settlement of the President would be so much in favour of labour as is now expected, the labour leaders are somewhat jubilant over the declaration of the truce. Their claim is, "We have gained every substantial thing we can gain. The strike has torn apart the whole unjust structure of the N. R. A. lifting a load from all labour, not only the textile workers." Mr. Gorman, who is the author of such a statement also adds "We have gained the abolition of the stretch out system, a method of determining wages upon facts, the practical recognition of the Union and the reform of labour provisions of the Textile code." The employers have not made any statement till now. And this is only to be expected ; for, while the labour leaders are guided in their statements by their possible effect on a large mass of workers, the employers may well be expected to take a more businesslike view and thus to obviate any degree of exaggeration in such statements. It remains to be seen which of the two will be justified in the long run, whether it is the triumphant boastings of labour or the judicious silence of the employers.

Labour Relations Board

For the present President Roosevelt has appointed a Labour Relations Board for the textile industry to settle disputes arising out of the recent strike. Mr. Walter Stacy, Chief Justice of the Supreme Court of North Carolina, will be acting as chairman for a fortnight. Other members of the board are Rear-Admiral Henry Wiley and Mr. James Millenbac, Labour Arbitrator. All three are members of the steel industry's Labour Relations Board.

Seamen Threaten Strike

Even on the assumption that the Government have left behind the cotton textile strike, they can only be said to have changed one problem for another ; for it is reported that the seamen are threatening a strike, and that the avoidance of this danger might prove to be more difficult than the ending of the textile trade dispute. The anxiety of the Government to bring about peace in the cotton textile industry is to be explained by the fact that, unless the truce was declared, there was every possibility of the workers of certain allied industries joining the textile workers in their walk-out. In this view, the cotton textile strike has been ended not a day too soon. But unless a similar makeshift is introduced at the eleventh hour, the Government may well find that they have cleared one hurdle only to be confronted with another and a far bigger one. There can be no doubt that the place of labour in the various textile industrial codes calls for re-examination and readjustment. For it cannot be that labour has been rendered militant only by the apparent exhibition of the sympathies of the Head of the Administration.

General Johnson Resigns

There is every sign that President Roosevelt is fully aware of this circumstance. His recent efforts at re-organising the structure of the Recovery Administration show clearly that he does not mean to postpone this all important task even by a day. But the complex structure of the N. R. A. and the emphasis it has had all along on certain personalities do not leave the road clear for the President to effect the reform. Nonetheless, the President recognises the imperative nature of the changes ; and though he naturally feels his way at every step, he is no less prepared to take the consequences of his action than at any earlier stage of his career. The talk of a reform of the N. R. A. and the tentative proposals that were put forward by the President's consultants gave rise at an earlier stage to the rumour that General Johnson might not continue for long in his position in the Recovery Administration. As we pointed out at the time when the rumour was first heard, the personality of General Johnson is such as would not fit him fully with any carefully defined constitution. For the essence of a constitution is the devise of checks and balances and the restraints on authority, however high placed. So long as the progress of the Recovery Administration depended to an inordinate degree on the capacity of the Administrator to cow down opposition and to force his way forward, General Johnson was indispensable. But of late the Recovery Administration has evolved a constitution for itself and the General's temperamental unfitness is exhibiting itself. That he himself is conscious of the difficulties that will arise in the future is seen in his undisguised impatience of the new proposals. The President has had a very delicate task. On the one hand there is General Johnson, who has not only been successful in the N. R. A. but is also a force in party politics. The elections are ahead ; and the consequences of breaking with a personality like the General are obvious. On the other, there are the susceptibilities

Air Mail Week.

of Miss Perkins and Mr. Donald Richberg. With the growing militancy of Labour, the retention of Miss Perkins is a necessity. The President's dilemma has been solved at last by General Johnson himself who has resigned on the ground that in the new constitution of the Recovery Administration, there is no need to continue a functionary like himself. He adds significantly that if his services should again be found to be necessary, the President would find him ready to return. From his own personal standpoint, the General has not much to regret, having secured a good offer from the film world. It is characteristic of American politics and business alike that the head of the Recovery Administration should retire so smoothly into business.

FRANCE

REFORM OF THE CONSTITUTION

There is a similitude, which few can miss, between the conditions on the eve of the formation of the National Government and those which prevailed eight years ago when M. Poincare was called upon to take charge of the affairs of the state. Brought into power mainly to arrest the fall in the franc, he accomplished his task by methods which are characteristic of a dictator, though he was far from a full-fledged dictator. The political and economic chaos which characterised French life in the earlier months of this year warranted the return of such a man to power. It was hoped that such a strong man was, indeed, found in M. Domergue and subsequent events have proved that, to certain extent, the hope was not a forlorn one. Confidence in the Government has since been established: the national budget has been balanced within satisfactory limits: the intrigues among the various political parties, have for the time at least, gone into the background: the fiscal reforms have been passed. The Ministry appears to be functioning well, to all intents and purposes ; except on the question of devaluation of the franc, on which opinion is divided.

From economics, the President has now turned to politics. The long expected broadcast speech has been made during this week ; and as expected, the main outlines of the proposed reforms in the constitution were announced. The seven months of power that M. Doumergue enjoyed and the confidence which he has gained have served to bring about certain radical changes in the practices and conventions in the Constitution, with the result that the periodical party intrigues and personal rancour may be completely eliminated or at any rate subdued for the present. In this aim, he is probably following the example of the English institutions, which along with the French are, perhaps, the two best worked examples of modern democracy. The peculiar position of the British Prime Minister, as the leader of the majority in the Parliament and as the head of the Government, has given him the safety and solidity of power which are essential for the head of the executive. The well disciplined army of the Secretariat headed by the permanent under-secretary for each department gives the Executive the fullest co-operation and the benefits of a ripe experience. In these two respects, the French constitution is open to criticism ; for the Prime Minister in France has not the right of dissolving the Parliament, in case of an overwhelming opposition, and appealing to the electorate, such as is enjoyed by the British prototype. Consequently he has to depend on the support of the various political groups which are not always above temptation. The higher ranks of the secretariat of the French Cabinet is not altogether free from corruption. The recent Stavisky scandal is proof sufficient for that. The death of M. Prince just on the day, on which he was due to give evidence in connection with the Stavisky enquiry, is only too recent a reminder of this evil.

The reforms in the Constitution outlined by the President, therefore, include the following:—

(1) that the authority of the President of the Cabinet should be strengthened and should be similar to those enjoyed by the British Prime Minister: *viz.*, that he should be invested with the powers of a leader

(2) that the President should have the right of dissolution and an appeal to the county

(3) that the Government will have the power to initiate public expenditure

(4) that a special statute should be introduced into the constitution defining the rights, duties and limitations of public servants.

Commenting on the proposals, M. Doumergue has specially emphasized the necessity of stripping the Chamber of its power to initiate expenditure. In this case, the Government are sure of having the budget, "which contains only the receipts and expenditure provided for by them, adopted within the proper period: and finally they have the security of a body of state servants who are well disciplined, subject to their duties and whose insurrection against the State would not be lightly tolerated." The speech is thus of great importance and after the reforms there is certain to be general elections and the first session of the new Chamber will be a eventful one. Already in some quarters there is some opposition to the reform proposals, though it is not pronounced ; but the President for the present may safely be assumed to be powerful enough to carry the day. Whatever might be the effect of the reform proposals, it cannot be denied that they are meant to remedy some of the vital and long standing evils in French political life.

Simultaneously with the discussion on the political reform, the President has reaffirmed his unabated faith in the present parity of the franc. The devaluationists have received their due share of rebuke at the President's hands. He still believes, as he had been believing for long, that devaluation will reduce the value of the franc to zero. According to him, this would mean "the ruin of all holders of private bonds, the ruin of all pension schemes and of all co-operative schemes ; the ruin of all savings bank depositors, the ruin of the famous French stocking ; the ruin of the workman and the ruin of the peasant." More than this vigorous defence, he has got out of the track and ascribed motives to the devaluations. Only the Communist parties and Allies are said to be interested in the devaluation move which, it is said, "will offer the greatest chances of stabilising their dictatorship." Perhaps this may appear to be too sweeping a condemnation of the claims of the devaluationists ; for when all is said in support of the Government's policy of deflation, it cannot be denied that a mild dose of devaluation will have the effect of reviving trade when all other efforts have failed. The examples of many countries that have tried the experiment with success should serve to expose the fallacy of such wholesale condemnation of the proposal. Already, there is a good deal of dissatisfaction as regards the efficacy of the quota weapon. This was indicated in the Commerce Minister's speech at Geneva last week. In an outstanding passage, M. Lamoureaux has lamented the fact that excessive restrictions placed on agricultural imports into France has resulted in retaliatory measures being imposed abroad not only on French manufactures but also on French agricultural products. The result is, among other things, Chilean and South African wines are slowly but steadily displacing French wines in the continental markets.

GERMANY

EXCHANGE AGREEMENT REVIED

The Anglo-German Exchange Agreement has been subjected to the relentless criticism that it lacks comprehensive vision as a whole, and that it fails miserably in details as a machinery for dealing with settlement of trade debts. Nevertheless, it cannot be denied that, barring the Exchange Clearing, this is the best that could be devised considering the circumstances prevailing in both the countries. When the machinery, therefore, broke down with the suspension of payment into the special account by Germany, the English authorities have begun to consider ways and means by which the machinery once started may be kept functioning. The various measures that the Reichs Minister of Economies has been taking all these months towards economic self-sufficiency have only served to increase the anxiety of the authorities in the United Kingdom. This is only as it should be, for already there is the question of outstanding trade debts, outside the sphere of the Exchange Agreement ; and this forms the subject of separate negotiations. There is the vast amount of interest payments due from Germany on all the loans nor can it be forgotten that not many months back there was a deadlock over the Dawes and the Young loans. The economic conditions in Germany, viewed from the creditor's standpoint, are far from satisfactory. Added to all these, when there is paralysis in overseas trade, the chances of repayment of loans and other items of indebtedness can very well be imagined. It is, therefore, heartening to note that some constructive measures have been taken to deal with the situation instead of mere unhelpful criticism.

It is only too well known that the main cause for the failure of the Agreement is the inability of the Bank of England to dispose of the "Sondermarks" accumulated to the credit of the special account. Not only has more demand to be created for these foreign currencies, but it has to be maintained at a sufficiently low level so that the maximum of Rm. 5,000,000 may not be reached. Any attempt at galvanising the institution into activity should, therefore, lie in this direction. The British Board of Trade has accordingly created new uses for these sondermarks. These may now be dealt "forward" instead of only in "spots," as was hitherto being done. They can also be bought for freight charges incurred by firms in the United Kingdom on (*a*) goods shipped on board vessels sailing under the German flag (*b*) goods forwarded from factories to German Ports. Disbursements in connection with shipping such as dock dues, stevedoring, loading charges and purchasing of ships' stores etc., are now permitted to be made out of the Sondermarks. The use for this purpose is, however, confined to charges incurred by British-owned vessels in Germany ports. Processing of raw and semi-raw materials and payment of the buying and selling commission of imports and export agents can be met in terms of Sondermarks. This currency may now be used by United Kingdom buyers to purchase German goods for shipment to any overseas country as well as to the United Kingdom provided the buyer is purchasing in his own account and not merely acting as an agent on commission.

In making this announcement, the Board of Trade has drawn attention to the desirability of importers of German goods paying for such goods in Sondermarks purchased from the Bank of England. For this purpose importers are to arrange either for the goods to be invoiced in Reichsmarks or, if invoiced in sterling, for them to be paid for in Sondermarks, at the rate of exchange current on the day of payment. Importers are also to make the necessary arrangements through their own banks, who will be in a position to obtain full particulars through their respective head offices. These measures, will, doubtless, aid to accelerate the disposal of the Sondermarks in the market, but the Board of Trade have issued a warning to traders, lest there should be any indiscriminate dealings, that, if traders accept payments in Reichsmarks since the suspension of the acceptance of Reichsmarks into the special account of the Bank of England, they can, under the present circumstances have no assurance that these Reichsmarks will eventually be transferred to the special account and sold for sterling. Attention is also drawn to the fact that British exporters to Germany should ascertain that the importing firm is in possession of the necessary currency certificate covering the import.

Simultaneous with the widening of the uses of Sondermarks is the visit of a delegation to Germany headed by Sir Frederick Leith Ross. Officially his purpose is said to be to study the situation. Particularly he is to find out exactly what the new German import policy is. Now he has seen and perhaps also found. He is returning this week from Berlin but has sent his report in advance. Exactly what is contained in the report is not yet known ; but it is expected that it should discuss the interim arrangement which has been agreed upon to avoid any disturbance of trade between Great Britain and Germany. Details as regard this temporary understanding have been announced simultaneously in Berlin by the German Government and in London by the Board of Trade.

This arrangement is purely a provisional one as it will remain in operation until October 30 or until the coming into force of a new agreement, whichever is earlier. According to this agreement, exchange certificates (Devisencheine) authorising payment into the special account of the Bank of England, will be issued by the German Exchange Control Board, to cover the import into Germany of goods covered by the Exchange Agreement of August 10, to an extent corresponding to the present volume of British imports into Germany. No distinction will be made between individual groups of goods. This arrangement applies to all goods for which payment through the special account of the Bank of England was permissible at the time of coming into force of the Anglo-German Exchange Agreement and to such other payments into the account as have subsequently been approved by the Reichsbank. In effect the existing position will be maintained under the interim arrangement and no new restrictions will be placed on the import of United Kingdom goods into Germany. The method of payment for all goods covered by the Exchange Agreement will continue to be through special account.

The transfer of the Reichsmarks to the special account will, however, continue to be dependent on the unsold balance of the Sondermarks not exceeding five million Reichsmarks. The balance on this account has been reduced below this amount on September 2 ; but during the period of the suspension of the transfer a further considerable amount of Reichsmarks has become due to the British exporters. The greater part of this outstanding is still awaiting transfer to the account ; and until these have been accepted, fresh payments in respect of new transactions will be held up. Subject to this, the imports of British goods into Germany can be maintained at their present level.

In financial circles in Berlin, this agreement is considered to be a great success for Britain, though a temporary one. It is considered a step in the right direction. Many technical difficulties, which have marked the successful operation of the old agreement on the British side, have been removed by the extended use of the Sondermarks and there is better hope of smoother working of the Exchange Agreement. This optimism is justified by the fact that the Bank of England, has, during the first two or three days of the week, been able to dispose of 1,000,000 Sondermarks as against about 50,000 Sondermarks in the previous days.

JUTE AND JUTE GOODS

JUTE

Calcutta, Oct. 12, 1934.

Early in the week very steady conditions prevailed in the raw jute market. December Futures was done up to Rs. 28-4. The highest and lowest quotations of the week were respectively Rs. 28-4 and Rs. 26-12.

The rise was mainly due to a heavy cover by a big speculator on his long account. Due to heavy purchases on Saturday Futures suddenly rose to Rs. 28-4. On Monday and Tuesday prices fell back to Rs. 26-12 on heavy long liquidation. The decline did not last long and on Wednesday prices again rose to Rs. 27-8. The undertone of the market has all along been very steady and the trend is definitely upward.

Business in ready Indian jute was done at Rs. 3-14 for XLR and Rs. 4-10 for LR, while mills are reported to have paid as much as Rs. 4 and Rs. 5 for European packing XLR and LR for January deliveries. Although sellers are keen on business due to heavy arrivals the market is well supported at declines.

Shippers have so far shown very little interest and there are no buyers for ready pucca bales even at Rs. 25-8.

Imports of jute for three months ending September are little over 25 lakhs bales as against 22 lakhs bales during the same period last year, while exports are lower by 8 lakhs bales as against 10 lakhs bales. Naturally the stock in Calcutta is much heavier than last year, but not so large as it should have been because local Mills have purchased more jute during these three months than last year.

The scheme of the Government of Bengal for restricting next year's crop has created a healthy effect on the market and indications are that jute will touch much higher prices by the end of the year. Statistically the position can be summarised thus: (1) Mills have already got ready forward purchases to the tune of 30 to 35 lakhs bales and their real need has been met to the extent of two-thirds of their requirements. This is a bull factor for the near position and bear for longer position. (2) Mills have purchased much less than last year, because their sales to world market for jute good have been very poor. The trade think that the requirements of raw jute by mills outside India will be 10 to 15 per cent. less than last year. (3) Considering the heavy arrivals of jute this season one is in doubt if the present crop is really smaller or if the arrivals are only due to weak holding power. The position will be clear by the end of the calendar year as well as the correct crop estimate. The real requirements of world markets will be definitely known only then when Government's plan for the next crop will be fully developed. A real upward move in prices, if it is to take place, will take place thereafter. It is feared by the market that in case jute prices go very high before next sowing season the curtailment of the new crop may not be so substantial as it would be if prices rule low.

JUTE MANUFACTURES

Calcutta, Oct. 12, 1934.

After ruling easy early in the week the hessians market has ruled steady towards the week-end. The rise has been mainly due to heavy cover by a long bear account in Futures. It is reported that the cover has been only a cross transaction, nine porter has been covered and eleven instead has been sold. The highest and lowest rates for November nine porters were respectively Rs. 8-11 and Rs. 8-8.

Due to weaker American Cotton market there was little fresh business from that quarter. There has been a fair business in heavy goods. B. Twills Nov./Dec. are dealt in at Rs. 24-8. Striped Cees are in good demand at Rs. 25 ready and Rs. 25-8 Nov./Dec. Nine porters ready 8 oz. changed hands at Rs. 8-11 and 7½ oz. at Rs. 8-10. Business for Jan./March 9 was done at Rs. 8-8 and for 11 at Rs. 10-15. The tone of the market is steady but quiet.

Total reported sales for the week ending Saturday the 6th October, 1934.

COTTON AND COTTON GOODS

COTTON

Calcutta, October 12.

Very easy conditions have prevailed in the Cotton market during the week under review. The highest and lowest quotations for Broach April/May were respectively Rs. 213 and Rs. 203.

The continued steep decline is rather unexpected. There are bull factors like rise in silver and better demand of Cotton from home mills, but they have so far not been able to assert themselves. The American Bureau report has been a severe blow to the market. The estimated growth is now placed at 94.43 lakhs of bales as against 92.3 lakhs of bales on September 8. The anticipations one time were as high as 97 lakhs of bales, though this was partly discounted in the market. But due to long bull holdings the market could not act bull even when the Bureau was placed at 94.43 lakhs bales. Liquidation was there and prices touched the low level of Rs. 203 : any way Rs. 200 should be considered a low level for the moment and purchases for short profits will not prove unprofitable.

The weakness has not been so much because of heavy yield conditions but because traders in Ud.S.A. are not sure if the Government will carry on their crop curtailment scheme for next year.

The Calcutta piecegoods market maintains a fairly steady level stimulated by Puja requirements, though there has not been the anticipated volume of business. Purchases have been on a moderate scale. The indigenous section avoided speculative commitments. Lancashire lines were in demand, a number of sales covering a wide range having gone through. Manufacturers' quotations were not attractive enough to induce a substantial turnover.

Bombay mills met a brisk demand for dhooties on a retail basis. The lower prices of Bombay finer qualities shut out Manchester competition. Japanese styles showed a firm tone due to 50,000 packages for India having been damaged by the typhoon. There is an optimistic under current for which bleached goods and fancy lines are chiefly responsible.

BULLION

GOLD

Calcutta, October 4, 1934

Due to London-New York Cross Rate declining to 4.90 Gold has been very steady. Local market quotations are Rs. 35-10 per tola while London has created a new record of £7 2s. 9d. per ounce. Stocks in Bombay are prtty heavy but that is no deterrent to a further rise in prices. The tendency is upward.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £191,821,508 on the 19th instant, showing no change as compared with the previous Wednesday.

During the week the Bank announced the purchase of £64,566 in bar gold.

In the open market bar gold to the value of £2,100,000 was disposed of during the week. A good general demand was maintained and the premium over the gold exchange parities tended rather to increase.

SILVER.

Calcutta, October 4, 1934

There has been a fresh sharp rise in the price of silver. Locally the market toucehtd Rs. 65 with a small decline at the close on profit-taking. London silver is quoting 23 3/8d. and New York 50¾ cents. Stocks and offtake remain unchanged at last week's level. Tht tone of the market is very steady with indications of a further rise in the near future.

London—Air Mail Week.

Following stronger advices from the Far East, the market showed a firmer tendency and to-day prices advanced sharply to 22 5/16d. for cash and 22 3/8d. for two months' delivery, the highest quotations recorded since December, 1929.

Reluctance on the part of sellers contributed to the firmness, offerings on China account having been more restricted. There was re-selling by speculators and some sales were made on Continental account, but offerings were well absorbed by demand from the Indian Bazaars and speculators. Purchases have also been made for America, but the demand in some cases was limited to slightly lower rates.

The present firmness of the market has been helped somewhat by the weakness of sterling, but the further outlook for silver continues good.

The following were the United Kingdom imports and exports of silver registered from midday on the 17th instant to midday on the 24th instant:—

Imports	£
Soviet Union (Russia)	24,200
Netherlands	11,410
Japan	19,108

SUGAR

In spite of the recent arrivals from Java, the local market witnessed some good selling, but the market was quiet for the past 7 days, since there was no future contracts.

Fresh contracts have been entered by a prominent party for New Sugar cane crop.

Buyers for futures are holding off, since the prices are going down day by day.

Ready Java quoted at Rs. 9-8 to Rs. 10/- and Indian at Rs. 9-2 to Rs. 9-8.

Upper countries' markets were lifeless during the week and there has not been much appreciable export from Cawnpore to consuming centres. The buyers are watching for the final announcement regarding the reduction in freight from respective Railways.

TEA

Calcutta, October 12, 1934.

Sale No. 18 was held on the 8th and 9th of this month when 22,531 packages of tea with export rights, and 10,890 packages of leaf and 9,057 packages of dust for internal consumption were sold at average prices of -/9/-, -/5/1 and -/5/5 per lb. respectively.

The quality was of the same standard except for a few Dooars teas which tend to become brighter. Though enquiry was fairly distributed, the tone was less active than the previous sale. The quantity offered this week was much larger than during the previous week's sale.

After a short-lived upward movement Mincing Lane prices sagged precipitately to the lowest levels for months. The trade is thereafter exploring the possibility of a reduction in exportable allowances in the third restriction year which begins next April. The current year's permissible export is 87½ per cent. of the standard allowances. Mincing Lane dealers want the percentage restored to the 85 per cent. level of the first year of regulation, though they realise that a reduction of 2½ per cent. might arrest the decline in prices without raising present depressing price levels. Price instability is forcing Mincing Lane to a demand for tightening the restriction screw. The International Tea Committee are averse to increasing the restriction rate in view of organised efforts to raise world tea consumption.

The following are particulars of Sale No. 18.

Tea with Export Rights.

CEYLON TEA

Fair Competition at London Sales

At the London auction on October 9th, 22,100 packages of Ceylon tea were submitted for sale.

There was a fair competition. Common sorts were easier, but better qualities were firmer.

The following were the lowest prices fetched during the day's auction:—

	Last auction lb.	To-day's auction lb.
Common Pekoe	11d.	11d.
Common Broken Pekoe ...	11½d.	11½d.
Common Orange Pekoe ...	11d.	11d.
Common B. O. Pekoe ...	11½d.	11¼d.

The following are the value prices:—

Clean Common Pekoe	11¼d.	11⅜d.
Clean C. B. Pekoe	11½d.	11¼d.
Clean C. O. Pekoe	11⅜d.	11½d.
Clean C. B. O. Pekoe	11¾d.	11⅝d.

LONDON TEA SALES

Not Many Price Changes but Market Firm

At the London auctions on October 3, 25,000 packages of Indian tea were submitted for sale. There was a keen demand and the rates were well maintained.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 11d., to-day's auction 10¾d. lb.; Common Broken Pekoe last auction 11d., to-day's auction 10¾d. lb.; Common Orange Pekoe last auction 10¾d., to-day's auction 11d. lb.; Common Broken Orange Pekoe last auction 11¼d., to-day's auction 11½d. lb.; Common Broken Pekoe Souchong last auction 11¼d., to-day's auction 11¼d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 11½d., to-day's auction 11⅜d. lb.; Clean Common Broken Pekoe last auction 11⅜d., to-day's auction 11⅜d. lb.; Clean Common Orange Pekoe last auction 11⅜d., to-day's auction 11⅜d. lb.; Clean Common Broken Orange Pekoe last auction 11⅝d., to-day's auction 11⅝d. lb.; Clean Common Broken Pekoe Souchong last auction 11¼d., to-day's auction 11¼d. lb.

At the London auctions on October 8th, 30,000 package of Indian Tea were submitted for sale. Commons and low mediums were rather quieter. Other sorts were firm with not many changes in price.

The following were the lowest prices fetched during the day's auction:—

	Last auction lb.	To-day's auction lb.
Common Pekoe	10¾d.	10½d.
Common Broken Pekoe ...	10¾d.	10½d.
Common Orange Pekoe ...	11d.	11d.

(*Continued from Page 918*)

subordinating self-interest to the common good. Such subordination is sought to be ensured in all professions by well-understood canons of conduct amongst the professionals. The Medical Council or the Bar Association has always a genuine solicitude for the good name of the profession and the quality of the service which its members render to the community at large. The latter is safe-guarded by prescribing the qualifications necessary for anyone desirous of following the profession; and there is no profession worth the name in the world, which does not insist on a certain minimum of general education and a certain proficiency in the particular line chosen.

I imagine that no journalist would like to think of his calling as a trade or a craft and not a profession as I have defined it. And if journalists are to form a respectable learned profession, they must be clear in their mind that the essential attributes of a profession are a minimum of general education, a high standard of specialised knowledge, a specific course of practical training and adherence to certain standards of conduct. If Indian journalism is to improve, it must make sure that journalists satisfy all the four requirements I have specified above. There is no use rating one higher than another or ignoring any of them altogether. There are perhaps some amongst us who lack all the four. The majority lack most of these. And the effect is seen in the attitude of scorn to education which generally prevails, among certain sections of our journalists. I would be the last to deny the strong points of those who, despite the lack of education, have fought their way to the front rank, or the awkward shyness of some of University lads who seem to suggest that it is the world's job to find the light which they hide under the bushel. But these instances cannot detract from the importance of general education or specialised knowledge in the pursuit of a profession.

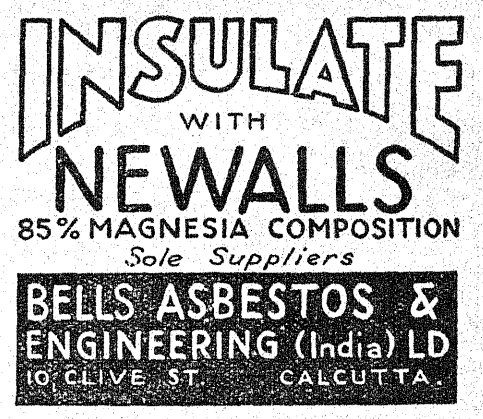
INDUSTRIES SUPPLEMENT



INDUSTRIAL EXPANSION

At the time of the inauguration of the Mettur Project in South India, we drew attention in our Editorial comments to the immense possibilities of industrial expansion which the hydro-electric projects have opened up. We stated also that we would endeavour to the best of our ability to help the realisation of those potentialities. The present issue of the *Monthly Industries Supplement* is devoted mainly to this question; and we must acknowledge the help we have derived from the Department of Industries of the Government of Madras. The Government, we are glad to find, are fully alive to their responsibilities in this matter; and they have endeavoured during this period to acquaint the public of South India with the industries, for the development of which ample facilities have now been provided by the hydro-electric projects. But we are not aware that the Madras Government have taken steps to bring these projects to the notice of the bigger capitalists and the investing public in other parts of India; and we feel that this omission will be made good by this Supplement of *Indian Finance*.

The articles that follow this Editorial note describe in detail the new industries for which facilities of production and marketing are alike ready to hand. The incentive to engage in new industries is also present in the shape of the troubles under which agriculturists now suffer. So far as South India is concerned, there can be no sharper spur than the appearance of an unparalleled drought on the top of years of depression in agriculture particularly in the rice trade. But for expansion of industry the most essential condition is a change in public psychology, a change which can bring on, so to say, a fever of industrial unrest. How far one can hope for such a change, while yet the depression is far from completely lifted, it is difficult to say. But it is possible for one and all to scan the prospects and to make a more dispassionate estimate of the necessary outlay and probable results than would be possible, once the boom is on. The articles in this issue are not a mere academic treatment of the industrial possibilities in the South but they also contain a careful examination of the possibilities of each industry. Concrete suggestions are made which capitalists, big and small, can adopt with but slight modifications. It is doubtful if South India has at the moment any considerable surplus of capital looking for avenues of investment. We are not referring to the savings of small investors but to the surplus profits of the big business classes. As we said earlier, for the mobilisation of small savings for the purpose of investment in industrial ventures, much depends on the general public psychology. Though one might feel more hopeful of such a change in the near future than formerly, the way will have to be shown by the bigger capitalists. And it is in this view regrettable that South India suffers from a drain of indigenous capital with which other parts of the country are happily unfamiliar. The losses, that South Indian bankers have sustained recently in Burma and the neighbouring islands, might, perhaps, turn their eyes to the homeland; but the benefits of this new orientation will not be realised soon. It is, therefore, very desirable that capitalists in other parts of India should also give their attention to the industrial possibilities in the South.

The importance of hydro-electric projects, however, lies not so much in the facilities for large-scale industry, as in the provision of power for small-scale and cottage industries. When electric power becomes available over a wide expanse of territory, cottage industries not only get a lease of life, but are even enabled to have a marked advantage over large-scale industry. The importance of reconstructing rural India can hardly be underrated. And what is the problem of rural reconstruction if not economic? Many, there are, who like to think that it is cultural and that bands of "selfless" workers roaming about the country could transform the villages into a new Elysium. Even those, who recognise the problem to be more material, indulge in vague hopes that the expansion of the key industries will result in economic amelioration all over the country. The complexity of our rural problems lies in the fact that a large mass of the people cannot tear themselves away from the land which gives them but inadequate employment and sustenance. From their point of view it is a question of finding work for the spare hours. From the social point of view it is a question of a full utilisation of man power. So long as cottage industry is identical with manual labour, there is an insoluble conflict between large-scale and small-scale industry. And on the strength of this conflict sentimentalists stress the cultural values of rural life and denounce industrialism. Village reconstruction falls into the hands of men who can bring no tangible good to the people.

The hydro-electric projects may be said to rescue the South from this sort of dilemma. Cottage industry need no longer be identical with mere manual labour. The most up-to-date mechanisation would be possible for the independent artisan and craftsman. With up to date equipment in each house, it would be possible for each worker to ply both industry and agriculture. The co-ordination of activity and the maintenance of quality and standard could be secured either through a vigilant government department or through the institution of new forms of co-operative activity. Doubtless, the Government would have to do a great deal. But it is not too much to believe that the new village Industries Association, which Mahatma Gandhi has instituted, will find this a fruitful field of work. Meanwhile, it is the duty of foreign suppliers of machinery and plant to study the new markets now thrown open and not only provide the goods but also demonstrate in every village the advantages of a cottage industry, electrified in both a literal and a metaphoric sense.

IMMINENT INDUSTRIALISM IN SOUTH INDIA

POSSIBILITIES OF METTUR AREA

[As promised in our editorial comments on the Mettur Project, we are endeavouring to collect information of a practical value about the industrial possibilities of the Mettur Area and bring the same to the attention of the business community all over India. The following from the Department of Industries, Madras will be found to be of great interest as indicating venues of new investment in the South.]

The headworks area of the Mettur Project includes the township on the right bank of the river Cauvery, in the Mettur taluk of the Salem District, with an extension on the left bank. The two parts are connected by a girder bridge of sixteen spans across the Cauvery, carrying two lines of tramrail and a road.

The site is connected with Salem Junction on the main line of the South Indian Railway (broad gauge) by a branch line 26 miles long, and with Erode, another junction on the main line, by a motor road 35 miles long. This branch line, we are told, forms part of a projected railway from Trichinopoly *via* Namakkal-Salem-Dharmapuri-Hosur to Bangalore. Mr. Green says when this through communication is established, it will tap the Bangalore area and be the shortest route for bringing cotton, etc., from Bellary to Mettur.

The township, as will be seen from a perusal of this pamphlet, possesses the most up-to-date amenities ; it is carefully laid out and traversed by metalled roads, and will shortly be connected by a metalled road with the Madras—Calicut trunk road.

The object of the publication is to invite the attention of manufacturers in India and abroad to the facilities which will be afforded by Mettur, on the completion of the Project in 1934, as a suitable location for the establishment of manufacturing industries and the setting up of mills and factories of various kinds.

The pamphlet then describes in brief the works proper, the history of their inception, the geographical situation of the Mettur Settlement and facilities for communication by rail and road, the existing buildings and other amenities, climatic conditions, possibilities of securing cheap labour, water-supply, and cost of electric power. We take the following paragraphs from the pamphlet:—

TEXTILE PRODUCTS

Cottage Industries

One of the main difficulties which has tended to restrict the development of industries in South India has been the high price and scarcity of fuel, but the position in this respect will be altered greatly for the better in the areas affected when electric power is available from the Mettur and Pykara projects. When cheap electricity becomes available, it should be possible to greatly develop, in what are to-day purely rural areas, small scale industries for working up into manufactured or semi-manufactured form the agricultural products of the province and thus to improve the economic condition of the villages with a consequent increase in the amenities of life on the countryside. Electricity, where available at a reasonable price, as will be the case in the Mettur area, will provide greatly improved facilities for the development of rural tracts. Electric power can be used for such varied purposes as pumping, sawing, fodder cutting and grinding, rice hulling, groundnut decorticating, oil milling, cotton ginning, bone-crushing, sugarcane crushing and sugar manufacture.

The development of textile industries in the home will also be fostered by a cheap electric supply and the following home industries of this character may be mentioned:—

(1) Single power loom for cotton weaving.
(2) Single power loom for silk weaving.
(3) Single power knilling machines for making socks.
(4) Single power circular knitting machine for making banians with artificial silk.
(5) Single power Barfus loom for mesh banians.
(6) Power warp preparation factory for supply of warp to knitting machines.
(7) Power warp preparation for supply of warp to cottage cotton power looms.
(8) Power warp preparation for supply of warp to cottage silk power looms.
(9) Dyeing and stencil printing.

Again, the facilities that will be afforded in the Mettur area, when the project is completed and cheap electricity is available, would appear to offer scope

INSURANCE OF SUGAR FACTORIES

for the setting up of small textile factories of the following descriptions:—

(1) Cotton power looms of 20 looms unit.
(2) Silk power looms of 20 looms unit.
(3) Small factory for the preparation of tapes, ribbons, shoe-laces, saree borders and similar articles.
(4) Warp preparation factory for supply of warp to small scale cotton factories.
(5) Silk throwing plant for supply of yarn to small scale silk factories.
(6) Wool spinning plant.
(7) Knitting factories for socks, banians, fish nets, and mosquito curtain cloths.
(8) Dyeing factory.
(9) Central carding factory for distributing silvers to cotton spinners.
(10) Factory for the manufacture of knitting healds.
(11) Factory for the manufacture of reeds.
(12) Factory for the manufacture of appliances such as jacquards, dobbies and slays, jacquard cards, shuttles, pirns, bobbins, etc.

Approximate financial statements in respect of most of the above industries have been worked out, and copies can be obtained from the Director of Industries on application.

TEXTILE MILLS.—COTTON SPINNING AND WEAVING MILLS

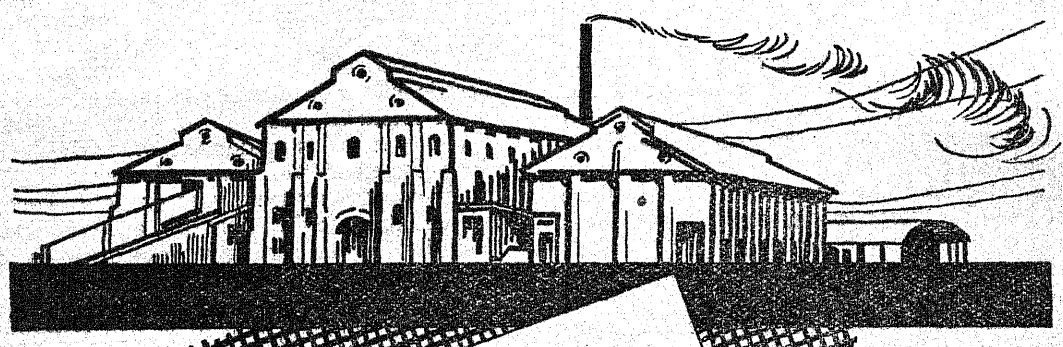
In view of the fact that a considerable proportion of the raw-cotton produced in the Madras Presidency is exported, there is considerable scope for the establishment of additional power spinning and weaving mills. In the Madras Presidency, the cultivation of cotton is largely carried on in the districts of Tinnevelly, Ramnad, Madura, Coimbatore, Trichinopoly, Salem, Cuddapah, Anantapur, Bellary, Nellore, Kurnool, Guntur, Kistna, Godavari, and Vizagapatam. Mettur is situated in the Salem district and is bordered by the Coimbatore district. The trade names of the several varieties of cotton grown in the Madras Presidency are 'Cambodias', 'Tinnevellies', 'Salems', 'Northerns and Westerns', and 'Cocanadas'. 'Cambodias' are grown in the districts of Trichinopoly and portions of Coimbatore and Madura district; 'Tinnevellies' in the districts of Tinnevelly, Ramnad, and portions of Madura; 'Salems', (Uppam) in the Salem district and portions of Coimbatore district; 'Northerns and Westerns' in the districts of Kistna and Guntur, Cuddapah and Chittoor and 'Cocanada' in the districts of Bellary, Kurnool, Anantapur, Cuddapah and Chittoor and 'Cocanadas' in the districts of Kistna and Guntur. Of the Southern India cottons, 'Tinnevellies' are well suited for the production of 40s. counts and below, whilst others are suitable for 24s. counts and below. The Northern staple is $\frac{7}{8}$ inches, the Eastern $\frac{3}{4}$ inches, the Cocanada $\frac{5}{8}$ inches to $\frac{7}{8}$ inches, the Karunganni $\frac{7}{8}$ inches the Tinnevelly $\frac{3}{4}$ inches to $\frac{7}{8}$ inches, and the Salem $\frac{3}{4}$ inches.

The acreages under each variety and the production in bales are shown in the following table:—

1930-31

Trade name,	Area in acres.	Yield in bales of 400 lb. each.
Cambodias ...	243,600	87,690
Tinnevellies ...	524,800	128,550
Salems (Uppam) ...	159,400	33,810
Nadam and Bourbon ...	41,300	1,790
Northerns and Westerns	920,950	101,460
Cocanadas ...	163,500	25,290
Others ...	17,800	2,300

There are about 2,500,000 acres of land normally under cotton cultivation in the Madras Presidency, and



BABCOCK & WILCOX LD
INCORPORATED IN ENGLAND
Offices: WALLACE HOUSE 4, BANKSHALL STREET · CALCUTTA
EXCHANGE BUILDING BALLARD ESTATE BOMBAY

the normal annual yield is about 500,000 bales of 400 lb. each.

SCOPE FOR MORE MILLS

The average annual imports of Madras during the last few years have been 7 million lb. of yarn and 70 million yards of cotton piecegoods, and there can be no question that having regard to the quantity of cotton available in the Province and the market for yarn and piece-goods in it, there is considerable scope for the setting up of additional spinning and weaving mills. There are at present only six or seven weaving mills in the Presidency employing a total of nearly 5,000 looms. The number of spinning mills is 22 and new mills are under construction or projected. The spinning mills employ at present over seven and a half lakhs of spindles.

It will now be convenient to consider under various heads whether the conditions precedent to the establishment and profitable operation of cotton mills exist in the Mettur area. The essential conditions which a site for a cotton mill should satisfy are—

(*a*) Proximity to cotton-producing tracts.
(*b*) Availability of power at a reasonable rate.
(*c*) Transport facilities.
(*d*) Ample supply of labour.
(*e*) Sufficient water.
(*f*) Sufficiently humid climate.
(*g*) Proximity to markets for the disposal of products.
(*h*) Suitable areas of land for the erection of factory buildings.

(*a*) Proximity to cotton-producing tracts.—Mettur is in the Salem district. As already stated, cotton suitable for 24s and below is grown in the district of Salem and in the adjacent district of Coimbatore, while Mettur is in railway communication with other important cotton-growing districts, such as Trichinopoly, Madura, Ramnad and Tinnevelly as well as with other districts further afield.

(*b*) Availability of power at a reasonable rate.—It has been shown that the cost of power at Mettur will probably range from .40 to .60 anna per unit and that an ample supply of water will be available for all purposes.

(*c*) Transport facilities.—These, also which have been described in the Introduction, page 6, as well as on page 13, appear to be favourable.

(*d*) Ample supply of labour.—There will be a large organized labour force in existence at Mettur on the completion of the project which, after training, would no doubt be suitable for employment in mills and factories. The nucleus of the trained labour for textile mills could be drawn from Coimbatore and other cotton mill centres.

(*e*) Sufficient water.—Water for industrial purposes could be obtained in almost any quantity from the river Cauvery. It cannot definitely be stated at what price such water will be available, but it could probably be supplied at about Rs. 3 per 1,000 cubic yards, a proportionate rebate being allowed for water returned to the river properly purified to the satisfaction of the health authorities.

(*f*) Sufficiently humid climate.—The climatic conditions of Mettur are found to be satisfactory from the weather reports of the rainfall and evaporation station at Mettur. If necessary, mechanical humidifiers could be installed, although as pointed out elsewhere, the waterspread which will be formed on the completion of the project will almost certainly render the climate more humid and thus more suitable for textile factories.

(*g*) Proximity to markets for the disposal of products.—The distances from Mettur to Salem, Erode, Coimbatore and Madras are 26, 35, 81 and 233 miles respectively. The cloth produced by weaving mills in Mettur should be able to find a sale in Madras and other important consuming centres. If cheap yarn is produced by spinning mills set up at Mettur, it should be readily absorbed by the handloom weavers in the various districts of the Presidency with which Mettur is in road and rail communication.

(*h*) Suitable areas of lands for erection of factory buildings.—On the Salem side of the river suitable factory sites are available near the railway station and could be purchased from Government or from private owners.

The chief items in the manufacturing costs of a cotton mill, excluding raw materials, are labour and power. It is generally recognized that in order to obtain the best results and maximum production from spinning and weaving machinery, it is necessary to apply an even turning moment at the driving shaft of the machine free from cyclical irregularities and to maintain a close speed regulation. In a mill supplied with power produced by a reciprocating engine, cyclical irregularities in the speed of productive machinery must occur. A rapid increase in the use of electric power in the textile industries is taking place in all countries and the majority of the machinery now turned out is made for motor drive. With electric drive increased productive efficiency as also a better product—whether it be yarn or cloth—could be obtained. Mettur would therefore appear to offer special facilities for the setting up of cotton mills by reason of its cheap power and other advantages.

Approximate financial statements in respect of (*a*) cotton spinning mill of 20,000 spindles, (*b*) cotton spinning and weaving mill with 20,000 spindles and 450 looms, (*c*) cotton spinning, weaving and bleaching, dyeing and finishing mill, (*d*) warp preparation and distribution factory, (*e*) central bleaching, dyeing

THE BUELL PULVERISED COAL FIRING SYSTEM

British in design—British in manufacture—to use Indian coals at their maximum efficiency

The features of the Buell Pulverised Fuel System which experience has brought out in power generating plants are:—

1. RELIABILITY IN SERVICE

Resulting from the design, materials and workmanship employed, enabling plants to operate over long periods without involuntary stoppage.

2. FLEXIBILITY IN OPERATION

Resulting from the complete control of heat liberation in the furnace, following the ease of adjustment of coal and air supply.

3. MAXIMUM OPERATING EFFICIENCY

Resulting from the close control of air supply and its intimate mixing with the powdered coal—maintained consistently at a commercial degree of fineness.

4. ECONOMY

Resulting from the adaptability of the system to cheaper grades of coal, minimum heat losses from carbon in the ash and excess air.

AVAIL YOURSELF OF NEW IDEAS, AND ENQUIRE FOR FURTHER DETAILS

Write for further data to:

THE BUELL COMBUSTION CO., LTD.

12, MISSION ROW - - - - - CALCUTTA

MARTIN & CO., AGENTS

and finishing factory, and (*f*) cotton waste spinning factory, have been drawn up and copies can be obtained on request. It is estimated that the approximate cost of turning out 1 lb. of yarn would be about As. 9-2 and that the cost of weaving one yard of cloth would be about As. 3-3.

DYEING FACTORIES

Dyeing factory.—If spinning mills are set up in the Mettur area for the production of yarn, and weaving mills for the production of cloth, there should be scope for the establishment of bleaching, dyeing and finishing plants as adjuncts to such mills. The essential requisites for a dyeing factory are—

(*a*) Cheap power.
(*b*) Adequate supply of suitable water,
(*c*) Skilled labour, and
(*d*) Availability of yarn and cloth for dyeing.

Factors (*a*) and (*b*) will be present at Mettur, the permanent hardness being only two parts per 100,000. The requisite skilled labour could be attracted to the spot while, if spinning and weaving mills are set up, supplies of yarn and cloth for dyeing will be available.

It is estimated that a small factory at Mettur turning out 12,500 lb. of dyed yarn per month should be able to produce dyed yarn at 8 annas per lb. There would seem to be scope for a small dyeing and aerograph printing concern. Detailed particulars of a factory for producing 150 lb. of dyed yarn per day at six annas a lb., and ten printed sarees of 8 yards each at Rs. 12 a saree, may be obtained, on application.

CHANCE FOR SILK FACTORIES

Silk industry.—The manufacture of silk goods is by no means an unimportant section of the handloom weaving industry, while silk enters into combination with cotton in a number of varieties of cloth. India produces from one and a half to two million pounds of raw silk annually and also imports from China and other countries about an equal quantity. The magnitude of the industry may be gauged from the fact that in the Kollegal taluk of the Coimbatore district 25 lakhs of rupees' worth of raw silk is manufactured annually. In addition to this quantity, about a crore of rupees' worth of raw silk is imported into the Madras Presidency from other parts of India and from foreign countries and the whole of this quantity in addition to the silk produced in Kollegal is used by the weavers. Raw silk is at the very outset a fine yarn, but it requires doubling and twisting so as to produce a thread sufficiently thick to stand the strain involved in the process of weaving. If therefore twisted silk is produced at Mettur with the aid of the facilities available there, it should find a ready sale amongst the handloom weavers of the Presidency. In fact, the establishment of silk throwing factories is essential for the development of power loom silk weaving on a small or large scale in this Presidency. In the case of a factory of 20 silk power looms producing per month of 25 days, 7,500 yards 48 inches wide, 100 ends and 120 picks, it is estimated that the cost of production of one yard of silk at Mettur would be As. 3-3. The cost of production of 1 lb. of twisted silk will be about Rs. 1-9-0. Financial statements for small factories can be obtained on request.

HOSIERY MANUFACTURE

Hosiery industry.—If spinning and dyeing concerns are started in the area, Mettur with its cheap electric power would seem to afford scope for the establishment o welfl-conducted power-driven hosiery factories, as the necessary supplies of yarn could be obtained from the spinning and dyeing mills. PULP AND PAPER PRODUCTION

POSSIBILITIES IN METTUR AREA

Mettur would appear to offer considerable scope for the establishment of a pulp or paper industry. In view of the heavy capital requirements of the industry, the first essential is a continuous and assured supply of the raw material. Investigations recently undertaken by the Forest Department indicate that a secure supply of bamboos existed and that the fundamental problem of getting the supply to a mill at Mettur would not present insuperable difficulty. The raw material occurs within forty miles of Mettur and bamboos in exploitable quantities are found over an aggregate of 35,000 acres in the reserves of Ramapuram Forest range, whilst an additional area of 5,000 acres carries bamboos in the unreserves. If a reasonable reduction is made in the gross bamboo area, it may safely be estimated that 25,000 acres contain dense bamboos. The Ramapuram bamboos are not, however, the only possible source of raw material for a pulp or paper mill at Mettur. There are extensive bamboo areas in Bargur range which are within easy access of the Palar and the Cauvery, and bamboos from this range could be floated down to Mettur. On the Palamalai hill, which adjoins Mettur, 3,000 acres contain bamboos. The average lead from this area to Mettur is under ten miles. There are in addition vast bamboo tracts in Bargur and Bhavani ranges, the outturn from which could be carted down to Mettur. It is probable that similar bamboo areas exist on the Salem side of the Cauvery. According to Mr. Raitt, the authority on the utilisation of bamboo for pulp and paper manufacture, a plant producing 10,000 tons of pulp is the smallest that would be economically feasible. Thus a sustained annual supply of 22,500 tons of air dry bamboos is the minimum required to run a pulp mill at a profit. If, however, a paper mill instead of a pulp mill were established at Mettur, a smaller unit producing about 5,000 tons of paper would be an economic proposition and in this case the minimum raw material required would be only 11,660 tons. The Forest Department estimates that from the Ramapuram range alone, an annual outturn of 28,000 tons of air dry bamboo could be obtained which in itself should be sufficient to support a 10,000 ton pulp plant. It will be evident, therefore, that a pulp or paper mill at Mettur would be extremely unlikely to fail for want of raw material.

TRANSPORT CONDITIONS

Transport Conditions.—The bamboo tracts in Ramapuram range are disposed round a central point called Uthupium within a radius of six miles. This point lies at an elevation of 1,500 feet and would form a convenient base for the bamboo exploitation operations as the river Cauvery flows within ten miles of Uthupium. The road which would have to be constructed in order to transport bamboos to the river would pass through easy country and the cost of construction is not likely to exceed Rs. 2,500. An alternative course would be to construct a tramway between Uthupium and the rafting station. From the rafting station the bamboos would be rafted down the Cauvery to the mill at Mettur over a distance of a little more than twenty miles. It is possible that artificial propulsion of the rafts might be necessary on account of the absence of a current strong enough to move the rafts quickly above the dam. The scheme of extraction would therefore be as follows: Bamboos would be cut by coolies and dragged or carried by them to the collection depot at Uthupium. From Uthupium they would be transported in carts or trains running on a tramway down to the Cauvery, whence they would be rafted to Mettur.

Cost of Extraction of Bamboos.—The cost of a ton of air dry bamboo at works is estimated as follows:—

	Rs.	A.	P.
(1) Cost of felling 450 bamboos and transporting to collection depot for an average distance of 4 miles ...	6	0	0
(2) Cost of transport of carts for a distance of 10 miles from collection depot to rafting station (one cart will carry a ton)	2	8	0
(3) Transport by rafts to works a distance of a little over 20 miles say ...	2	0	0
(4) Contingencies	0	4	0
Total ...	10	12	0

Thus the total cost of one ton of air dry bamboo at works amounts to Rs. 10-12-0. Allowing a margin of 25 per cent., the equivalent of a ton of paper pulp will cost about Rs. 30-4-0. To this must be added the royalty payable to Government, say Re. 1 per ton of bamboo. Government would probably be willing to lease the bamboo area for a term of say 20 years.

Labour.—Labour is available in the local villages, though it is not perhaps likely to be sufficient for the bamboo extraction operations and it may be necessary to import additional labour. There should be no serious difficulty in regard to this, however, as the completion of the Mettur Project will throw large numbers of men out of employment and they will be available for the mill as well as for the collection of raw material. Coolies can always be obtained from the Salem side of the Cauvery.

Index Figure of Prime Costs.—As a ready means of ascertaining whether a project is a sound financial proposition or not, Mr. Raitt, the authority previously quoted, has prepared the following index figure consolidating the various items of cost for preparing a ton of pulp:—

	Rs.	A.	P.
(1) Two and a half tons of bamboo at Rs. 15 per ton	37	8	0
(2) Four tons of fuel at Rs. 6 per ton ...	24	0	0
(3) Three-fourth ton of limestone at Rs. 8 per ton	6	0	0
(4) One ton pulp freight to port ...	12	8	0

A mill at Mettur would have an advantage in respect of the price of the bamboo, whilst under fuel there should also be a saving as compared with Mr. Raitt's figures provided the electricity which will be available at Mettur is used for steam raising in the digesters as well as for power. Burnt limestone can be delivered at Mettur for about Rs. 28 per 100 cubic feet. The freight on a ton of pulp from Mettur to Madras would be Rs. 16-7-0.

SPECIAL ADVANTAGES

Advantages afforded by Mettur for the Pulp or Paper Industry.—The general factors favourable to the location of a pulp or paper mill at Mettur may be briefly summarized as follows:—

(*i*) The species of bamboo occurring in the area is almost exclusively *Dendrocalamus strictus* which is specially suitable as a raw material for pulp manufacture. The Forest Research Institute has demonstrated the suitability of bamboos generally as raw materil for paper pulp and in particular of *Dendrocalamus strictus*, the local species of bamboos which is usually not subject to gregarious flowering.

(*ii*) From the Ramapuram Forest range alone it

CASTINGS

INCORPORATED IN THE UNITED KINGDOM

is estimated that at least 25,000 tons of dry bamboo annually could be extracted and delivered at mill site at Mettur for less than Rs. 15 a ton. An adequate and sustained supply of raw material at reasonable rates should therefore be assured.

(*iii*) River transport would be available for the greater part of the total lead right up to the mill.

(*iv*) As the proposed mill would be situated on the banks of the Cauvery, an inexhaustible supply of fresh water, an essential requirement of a paper or pulp mill, would be available.

(*v*) Cheap electric power is available. The cost of power at Mettur would range from 0.4 to 0.6 anna per K. W. H., whilst special rates will be allowed for industrial establishments guaranteeing an annual consumption of not less than 400,000 units.

(*vi*) Large quantities of limestone of the crystalline variety are available near (1) Mavelipalayam near Sankeri, 53 miles from Mettur, (2) Pakkanad, a village in Salem district, 15 miles from Mettur by road, and (3) Anandampalayam, a village 15 miles from Mettur on the road to Bhavani.

(*vii*) Suitable plots of land for the erection of the main mill buildings are available at Mettur, whilst a large number of buildings suitable both for factory and residential accommodation will be available when the Mettur Project is completed.

(*viii*) As Mettur is on a broad gauge railway line, the import of chemicals, etc., and the export of the finished product should present no difficulty.

(*ix*) Tram lines, haulage engines and other industrial plant could probably be purchased cheaply from the Public Works Department on completion of the dam.

CHANCES FOR PAPER MILLS

Relative Advantage of Pulp and Paper Manufacture.—Whether it would be possible to supply the existing manufacturing concerns in India with pulp from Mettur, or whether it would be practicable to export pulp to Japan and Australia in replacement of the considerable quantities which those countries import in normal times from Scandinavia is a matter for expert investigation. Similarly the question of the relative advantages of manufacturing pulp or paper at Mettur is one for decision by experts. The bulk of the trade is conducted in unbleached pulp, but in view of the fact that cheap power will be available at Mettur, it might be more advantageous to manufacture the bleached product. Should an alkali industry be started and bleaching powder produced at Mettur a bleached pulp or paper mill would of course be in a particularly advantageous position. Imported bleaching powder could, however, be delivered at Mettur at about Rs. 182 per ton. One of the advantages of manufacturing paper in preference to pulp is that the overhead and depreciation charges to be carried per ton of product can more easily be carried on the higher value of paper than on the lower value of pulp, and further it is perhaps easier to sell paper than pulp. If a paper mill were set up at Mettur, it should be possible to turn out (*i*) cream laid and other writings paper, (*ii*) white printings other than newsprint, (*iii*) wrapping and packing paper, (*iv*) badami paper and (*v*) brown paper of a satisfactory standard of quality. The imports of these and other varieties of paper (excluding newsprint) into the Madras Presidency by sea during the last three years appear to have averaged about 7,200 tons. The market for paper in this Presidency is not at present large, but though the average consumption of paper per head of the population is very low, there can be little doubt that the consumption will develop gradually in response to the growth of education.

The prospects of a pulp or paper mill at Mettur, utilizing mainly the bamboo of Ramapuram range in Kollegal Forest division as raw material, would seem to be reasonably promising. There is, as already shown, ample bamboo within economic reach of Mettur, whilst many other essential conditions appear to be favourable. The question is now under investigation and any information or additional data on the subject that may be required by prospective manufacturers can be obtained on request from the Director of Industries. The Chief Conservator of Forests will also be glad to supply maps of the bamboo area as well as charts showing the quantity of bamboo available in the several forest ranges.

GROWING MARKET FOR HARDENED FATS

EXPLOITATION OF OIL SEED RESOURCES

The exploitation of the vast oil seed resources of the Presidency, held up so far by the lack of proper facilities for production and marketing, has now been rendered a commercial proposition through the facilities in the Mettur area and due largely to the demand for vegetable oil and fats for industries like soap, artificial ghee, lubricants, etc.

Oil seeds are of great economic importance to the Madras Presidency owing to the variety of the seeds and the extent of their production. Only a very small percentage, however, of the annual outturn of oil seeds is converted into oil, the greater portion being exported as such to foreign countries. In the year 1929-30 the value of exports of seeds amounted to Rs. 1,412.30 lakhs or 33 per cent. of the value of the total foreign export trade of the Presidency in Indian produce and manufactures. The value of foreign exports of groundnuts during 1929-30 amounted to Rs. 1,338.97 lakhs representing 30 per cent. of the foreign export trade.

The exploitation of the vast oil seed resources of the Presidency must depend to a great extent on general industrial development and the setting up of factories utilizing vegetable oils as a raw material. Soap factories are a case in point, as every additional soap factory that is established increases the demand for groundnut and cocoanut oil. A still more important potential outlet for vegetable oil lies in the manufacture in India of vegetable ghee on a large scale. If the manufacture of pure artificial ghee from vegetable oil is developed in India, it would result in the utilization in the country itself of an increasing quantity of the oil seeds produced in the Presidency and the lowering to the public of the price of ghee and other fats. An increased quantity of oil-cake would also become available to the ryots at a cheaper price for use as manure and the soil would consequently be enriched. Mettur would appear to be a suitable location for the establishment of a factory for the manufacture of vegetable fats by the hydrogenation process, as the main road to Madras from Calicut will pass through it, while it is in railway communication with Salem. In virtue of its proximity to such centres as Erode, Coimbatore, Pollachi and Palghat on the West Coast, a factory at Mettur would be able to secure almost all kinds of vegetable oils and fish oil in any quantity. If an export trade is developed, shipments can be made through the ports of Madras, Calicut

HYDROGENATION FACTORY

In view of the suitability of Mettur for the establishment of a hydrogenation factory, it may be worth while to discuss the possibilities of such manufacture. The hydrogenation industry is strongly established in Europe and America and hardened fats prepared from vegetable oils and fish oils, have, owing to their cheapness, now almost entirely replaced the use of mutton and beef tallow in soap factories in Europe. In America, there is a considerable production of hardened fats. In India there should be undoubted scope for the employment of the hydrogenation process, for, not only are the requisite natural oils available, but there is a good market for the products. The use of beef fat is objected to by Hindus and pig fat (lard) by Muhammadans. There should therefore be a steady and growing demand for hardened fats both for use in the manufacture of toilet soaps and as a suitable substitute for ghee. At present Indian soap manufacturers have to depend largely upon tallow (beef and mutton) in the manufacture of high class toilet soaps. Local tallow is of very indifferent quality and is extremely wasteful to refine, while the quantity available is neither steady nor sufficient. On the other hand, tallow imported from Australia, New Zealand and England is very expensive. Soap manufacturers in India, who have to use at present an expensive tallow for high class soap are therefore placed at a disadvantage in competing with soap makers in Europe. An assured and cheap supply of a suitable tallow substitute prepared from vegetable oils in this country would give a decided impetus to the development of the toilet soap industry.

HARDENED FATS

Among the other uses of hardened fats, the following are the most important:—

(1) Artificial ghee, ghee substitutes, margarine.
(2) Lubricants.
(3) Candles.
(4) Insulating compositions.
(5) In the tanning of leather.

(1) At present pure ghee is not available in India in sufficient quantities and the price also is very high, while most of the bazaar ghee is unwholesome and grossly adulterated often with deleterious substances. As a result, ghee substitutes manufactured in Europe are finding an increasing market in India. Although such products are not equal to pure ghee in the matter of flavour, taste, and nutritive value, they are harmless and are infinitely superior to the so-called ghee vended in the bazaars. The artificial ghee factories in Europe and America are now said to be adding something in the nature of a substance rich in vitamin to hardened fats in order to make up for the deficiency of this vital element which is necessary, though in a minute quantity, for nutrition. These ghee substitutes are simply hardened vegetable fats or mixtures of such hardened fats and liquid vegetable oils such as cocoanut oil, sesame oil or groundnut oil blended with a small admixture of butter, fat or even ghee. In Europe hardened fats are now even replacing tallow and lard as shortening material in the manufacture of bread.

(2) Formerly tallow was commonly used in the manufacture of lubricants, but now hardened fish oil is gradually taking the place of tallow owing to its cheapness. An outlet for hardened fats should be found in the form of axle grease on railways as also in mills and factories which use tallow for the lubrication of machinery.

(3) Hardened fats are used in Europe in the manufacture of candles. Stearic acid obtained by the ordinary process of fat splitting and distillation is more expensive than hardened fats, as the process of preparing stearic acid is very elaborate and the output limited. For use in tropical countries, candles made from hardened fats are preferable to those made from mineral wax of a low melting point, as the latter, though cheap, are wasteful.

(4) As insulating composition, hardened fats are extensively used in Europe.

(5) In the tanning industry, stearic produced by hydrogenation is used in place of olea-stearine. For stuffing harness leather, belting and other heavy leather, belting and other heavy leather, hardened fat is gradually taking the place of tallow.

It will be seen from the foregoing that hardened fats are used for a variety of purposes and that there should be a growing demand for such fats in India. India is importing annually about 23,000 tons of vegetable fats, chiefly, from the Netherlands, most of which is consumed as edible fats or substitutes for ghee.

On the basis of the figures embodied in the foregoing statement, the cost per cwt. of hardened fat works out on an average to Rs. 38-4-0.

A GROWING MARKET

There already exists a good market in India for hardened fats, and the demand is likely to increase steadily. The possibility of developing an export trade in hardened fats should not be overlooked as such products in the form of solid slabs could be easily packed and shipped. The difficulty attending packing, liability of oil to become rancid, losses due to leakage, higher freight rates and other cause which now operate as an impediment to the successful development of the export of oil from India are factors which are absent in the case of shipment of hardened fats. The large quantity of oil consumed by the hydrogenation industry would give an impetus to the oil milling industry in the Presidency and to the cultivation of oil seeds which is passing through a difficult time. A hydrogenation factory at Mettur could either set up its own oil crushing mill or draw its supplies from oil mills in the surrounding country.

There are several types of hydrogenation plant and hydrogen producing plant in use in Europe and America. The main sections of the plant are for—

(1) Production of catalyst.
(2) The recovery of catalyst.
(3) Production of hydrogen.
(4) Hardening.

The hydrogen generating plant is usually based on the iron contact process, but as cheap electric current will be available at Mettur, the electrolytic method of generating hydrogen would doubtless be adopted.

INDIAN FINANCE YEAR-BOOK 1934

NOW READY

OUTSTANDING FEATURES :

1. A Concise and Comprehensive Review of India's Trade, Budget, Finance, Banking, Insurance, Transport, Industry and Agriculture.

GLASS MAKING IN INDIA

The history of glass making in India goes back to the sixteenth century, when Delhi glassware of exquisite design and delicacy was used in the courts of the Moghul Emperors. With the decadence and disruption of the Moghul suzerainty, the art of glass making gradually fell into disuse, another memory of India's wonderful craftsmanship. It was not till the close of the last century that glass-making as an industry was taken up. A few modern factories were set up with an unhappy sequel. Inefficient management and the absence of skilled labour combined with inadequate research and high railway freights to cripple an industry with a vast potential field in India. The following figures show imports of glassware into India:—

1929-30	...	...	Rs. 251.93 lakhs.
1930-31	...	...	,, 164.77 ,,
1931-32	...	...	,, 129.97 ,,
1932-33	...	...	,, 142.47 ,,
1933-34	...	...	,, 122.13 ,,

Earlier statistics show that pre-war imports averaging about Rs. 194 lakhs a year rose to Rs. 253 lakhs in 1926-27. The general trade depression following 1929-30 accounts for dinimishing imports, which come principally from Japan, though Australia and Germany were in pre-war years the chief exporters to India of supply. While Europe was fighting during 1914-1918, Japan captured the Indian glass-were market and year by year has since consolidated her position.

At the present time there are about 14 factories spread over the country. So exiguous are their economic resources in face of Japan's formidable competition that the Committee of the Federation of Indian Chambers of Commerce wrote last month to the Government of India asking for an early publication of the Tariff Board's report on the glass industry with a view to its adequate protection. Mere protection, however, will not vitalise the industry unless *pari passu* glass manufacturers improve technique and concentrate on research. There are two sections of the indigenous industry. One is a cottage handicraft making glass bangles, the centres being Firozabad and Belgaum. The other manufactures on a commercial scale various kinds of glassware, such as bottles, flasks, vases, mirrors and domestic utensils from glass slag or imported broken glass. Requirements of scientific laboratories and finer grades are, with the inception of one factory, not made in the country. Experiments made a few years back to make beer bottles and ornamental glass beads were not encouraging. In recognition of a much-needed protection, Government imposed in 1923 an import duty of 30 per cent. on glass bangles, beads and imitation pearls and 15 per cent. on glassware. These imports have not shut out Japanese competition, which has of late practically killed the indigenous trade in bangles of which the demand is enormous. Sheet and plate glass are not yet made in India.

The technical and other disabilities under which the industry labours are respectively, inadequate equipment of machinery and high railway rates for silica, lime and coal which are the bases of glass manufacture. The chemical treatment of silica with soda carbonates and sulphates is a highly technical operation, which is in the present state of the industry prohibitive. Heavy railway freights on these raw materials handicap factory production so seriously that manufacturers find it more economical to import certain chemical products. This is an aspect of the industry which, it is hoped, the Tariff Board's report will bring out. Without a re-adjustment of railway rates to the needs of the industry glass making will remain an impractical economic proposition.

Skilled labour of the quality common in Japan or Europe or the United States is not available in India. Certain kinds of glass, such as watch glass, involve highly technical processes and the Indian workman is far from proficient. Cutting and grinding glass, in which Japanese factory women excel, are defective. The suggestion that selected Indians should be sent abroad to study mechanical methods and acquire the requisite experience is not helpful unless foreign manufacturers are willing to afford Indians adequate facilities—a point on which there is well-grounded scepticism. The linking up of progressive research to industry is illustrated by the recently devised automatic bottle-making machines which reduce costs to the lowest levels. The United Provinces Industries Research Reorganisation Committee have stressed this vital consideration as no indigenous glassware made by primitive or precarious methods can meet the competition of high grade foreign articles. A grant of Rs. 10,000 has been allocated to research in the United Provinces, though a much bigger recurring annual contribution from Provincial revenues is indicated. While glass making in other countries has in the last ten years made remarkable progress, in India it is on the verge of extinction. Protection wet-nursing would certainly ward off total extinction; but the industry cannot hope to survive any considerable time without essential technical and economic treatment. Now that economic planning is the special pre-occupation of Provincial Governments and official industrial conferences are multiplying, the manufacture of glassware ought to receive the consideration it has missed for thirty years. Glass is coming increasingly in use in the daily domestic and social life of the people. Its economic scope is limitless with abundunt raw materials. The Tariff Board's survey will be awaited with interest by economic-minded Indians.

SUGAR MARKET REPORT

October 15.

During the first fortnight of October marketing conditions generally have not been relieved as far as Java is concerned, as prices ruling in our consuming markets are all below our parity without exception. In some cases the lower prices are the cause of the heavier arrivals to a poor demand, with hasty clearances of holdings, but in other markets reports are to hand that sellers are discounting a further fall in relative values and offering sugar at the lower parity. The exchange position is operating against the Java exports. This still represents the main factor of price competition especially in the Indian markets, and more recently in the China markets also.

Licht's estimate of the European and Russian Beet crops issued at the end of September is nearly 200,000 tons more than the estimate of Dr. Mikusch.

The main feature reported from New York in the interim was the sales totalling 145,000 tons of Cubans, advised on the 5th inst. at a price of 2.18½ cents New York to Refiners. It is understood that these sales include a price guarantee to the end of the year, and it would appear form part of some arrangement relative to the price control of Cuba sugars held in Bond in New York, but on this point we have no definite advices. We have received a copy of the Cuban decree by which sugar sales are controlled by a Committee as referred to in our last report. This control appears to be effective and Cuba held the position as regards Raws for the United States market until the close of the year.

New York Futures prices lost 10 points since the first of the month, and are rather below the parity value of Cuba Raws at the present.

Our local market continued dull with no important features. Sales lists issued by the N.I.V.A.S. include the following more important sales:

October	2nd	... ...	3,000 tons.	BROWNS probably to Japanese buyers.
,,	8th	... ...	1,514 ,,	WHITES for Straits and Bangkok trade.
,,	9th	... ...	7,600 ,,	BROWNS for New Zealand refiners.
,,	10th	... ...	500 ,,	WHITES for Port Said.
,,	13th	... ...	520 ,,	do. for China.
,,	14th	... ...	3,000 ,,	do. for China.

KRUPP ROLLS protect you

MAGDEBURG

Apply for full particulars to:—

KRUPP INDIAN TRADING Co., Ltd.

(INCORPORATED IN GERMANY)

Head Office—
P.O. Box 660, BOMBAY,
Strona House, Ballard Estate.

Branch—
P.O. Box 2163, CALCUTTA,
Mohta House, Strand Road.

The total sales during the interval were 29,042 tons Whites and 14,715 tons Browns—the total according to the N.I.V.A.S. list to date being:

1,784,912	tons	WHITES
738,321	,,	BROWNS
9,570	,,	SOFTS
65,232	,,	MOLASSES
Total ... 2,562,035	tons	

Prices for the local consumption and island trade remain unchanged, but prices for other markets are subject to adjustment as condition warrant and we only quote the relative CIF values in most cases.

China Markets.—The Hongkong market is rather well supplied with sugar at the present, and buyers are shewing little interest in her business. Sales were reported earlier in the month of Whites at F. 2.7½ to F. 2.73¾ per picul CIF terms for prompt shipments. There are offerings at these prices for any shipment to the end of February.

The Shanghai market is disturbed by the many varieties of sugar being imported there. We hear that some of the interior markets drawing supplies from Shanghai usually, are being supplied from further Northern inlets at cheaper prices—indicating smuggling. Buyers are holding off at the present, and we hear of no special business. We quote Whites CIF Shanghai for November-December shipment F. 445 per 100 kilos.

British India.—Prices ruling in the Indian markets continue below our parity. Bombay reported sales of Whites by European importers for shipment November to March at around 5/6 and 5/7 per cwt. CIF (against our parity of 5/10). Karachi report no special features, and from Calcutta the market is content with present commitments en route.

Stocks on the 13th instant were estimated at:

	Tons.
Calcutta	5,600
Madras	500
Rangoon	700
Bombay	7,200
Karachi	7,700
Bhavnagar	4,000
Bedibunder	1,300

At present we quote Java Whites CIF per cwt.: Calcutta, Madras, Rangoon, Oct.-Nov.-Dec. shipment 5/11

Colombo, Bombay, Karachi, Oct.-Nov.-Dec. shipment 5/10¼

Reports from Calcutta state that the Indian Sugar Mills Association representing about 80 sugar mills have invited the Government's attention to the imports of Java sugars at continually lower prices, and refer to the previous recommendations of the Tariff Board if sugar declined to a price below Rs. 4 per maund. The idea is to obtain further protective duties.

London.—Prices on the London Terminal market shew little change—minor fluctuations have been recorded in line with the dollar exchange movements, but no special features have been reported.

Closing buyers prices were:—

	Dec.	March	May	August
October 1st ...	4/5	4/7¼	4/9	4/11¼
,, 4th ...	4/4	4/6¼	4/8	4/10

RUBBER REGULATION

WHAT IS THE BEST LEVEL OF PRICES ?

The way of economic planning is beset with unforeseen elements as the rubber industry is experiencing. Crude rubber prices under the stimulus of abnormal conditions advanced 150 per cent. between March 1933 and March 1934 in spite of the fact that production during that period exceeded absorption by over 30,000 tons. A disastrous set-back in prices thereafter was prevented by the inauguration on June 1 last of the second rubber control plan which aims at the reduction of world stocks to normal figures so as to ensure an economic return on the producer's capital investment. The rise in prices stimulated production and exports from producing countries totalled 260,000 tons in the first quarter of this year. On a rising market influenced by an imminent regulation scheme, manufacturers increased their stocks last year, which accounts partly for the phenomenal absorption in January-March, 1934. Absorption in the United Kingdom, for instance, in March last was 12,190 tons against an average monthly absorption in 1933 of 6,625. Other countries present, more or less, the same contrast.

Estimates of future consumption are necessarily problematical; but the undernoted figures may be taken as nearly approximate as present conditions indicate :—

July-Dec. 1934 ...	210,000	210,000	420,000
Jan.-June 1934 ...	260,000	230,000	490,000
Total ...	470,000	440,000	910,000

On these statistics exports of crude rubber this year will exceed absorption by 105,000 tons, the assumption being that control is not being seriously exercised to minimise initial difficulties. At the end of last year stocks in the United States were 364,000 tons and in the United Kingdom 86,000 tons. These stocks have appreciably risen during subsequent months. If consumption nevt year is placed at 920,000 tons and a normal stock in the United States and the United KKingdom be taken as 3½ months world consumption, then these stocks must be reduced by nearly 200,000 tons before control can serve its purpose.

A 30 per cent. curtailment should reduce stocks in 1935 by over 100,000 tons; and if consumption registers an appreciable increase over last year's figures a 70 per cent. release may be found to be insufficient to stabilise prices at a desirable level. No decision has yet been made regarding nevt year's quotas. The difficulty of controlling native production in the Dutch East Indies has been temporarily overcome by an export tax. Exports from Malaya and the Dutch East Indies in June and July last were well below the allotted quotas, supplies having been held up in the expectation of higher prices. It would appear that Malaya growers are running a little restriction scheme on their own.

As only three months have passed since the inception of the Rubber Regulation plan it is too early to pass judgment in its effectiveness. The recent sharp increase in prices has not led to reduction of stocks; and it is possible that more drastic restriction may be demanded to level down stocks. Manufacturers prefer stable prices of raw materials at a level slightly above the average of fluctuating quotations. The increase in price of rubber since March 1933 from 2.12d. per lb. to 7.50d. per lb. is not normal as many estates can make a reasonable proyt at 4d. per lb. What is to be feared is a rapid and undue rise in prices. Messrs. Charles Hope and Son, the London rubber merchants, stated in o circular issued on July 6 that, in their view, a fair and equitable price is "one that will enable rubber companies to re-instate at pre-slump prices all those employed in the production and marketing of their rubber, maintain their estates in good order, allow for amortisation, not only of builedings and machinery, but also of trees and finalyl make not less than 6 per cent. on the money invested in the estates". The success of the restriction scheme will depend on a price policy arriving at increased consumption to the potential level of production. Most restriction schemes suffer from the disability of allowing high prices to outweight the possibilities of increased consumption. The decision of the International Rubber Regulation Committee) to apply the regulations gradually has simplified to some extent the problems of the producer. As the scheme remains in force for four and a half years, it is raesonable to hope that experience will adjust the scheme to changing conditions of the industry.

India is vitally concerned with a revision of South India's quota by the International Rubber Regulation Committee. The Committee have not yet taken up India's representation as other problems are engaging the Committee's attention. One of these, is Siam's emand ford a revision of the quota allotted to her. It seems that 1935 will not begin with South India's quota unaltered. The International Committee, like other Committees, more slowly and there is a growing feeling that incessant agitation, with a threat of succession from the scheme, will only influence the Committee. The continuance of the present inequitable quota will paralyse the South Indian industry. On a 45 per cent. quota basis it is not possible to make any estate pay. After meeting administration and operating costs the quota leaves only Rs. 9 per acre for all overhead expenses, which spells ruin. Both Government and the Planter' Association should combine to save the industry by insisting on a consideration of India's case before the end of the year. Cochin and Travancore, who have not yet agreed to give effect to the scheme within tehir territory, would do wel to bear this in mind.

(*Continued from page 1049*).

market for hosiery goods in India is a growing one, only the fringe of the potential demand having yet been touched. India is Japan's principal customer, importing knitted goods from that country to the extent of over 3,300,000 dozen in 1929. It is estimated that in the case of a factory producing per month 100 dozen socks, 1,250 yards mesh and 1,500 yards netting, the cost of production would be—

	Rs.	A.	P.
1 dozen socks	1	6	0
1 yard curtain or mesh ...	0	2	3.5
1 yard fish netting	0	2	4.5

The cost of producing 100 dozen cotton socks per month on a power-driven circular knitting machine would be about Rs. 1-10-1 per one dozen socks. On the basis of an output of 2,250 yards per month one yard of artificial silk banian cloth could be produced at an estimated cost of 9 pies, mesh banian cloth could be manufactured on a Rashel loom, 96" wide with 12 needles, at a cost of about 2 as. 3⅓ ps. per yard. Financial statements for hosiery mills have been worked out and copies can be obtained from the Director of Industries on application.

WORLD OF INDIAN FINANCE

Calcutta, October 26.

The long break in business caused by the Puja holidays and the scanty number of working days during this week have prevented the emergence of marked trends in business conditions. In some respects, the last three days have been but an extension of the incomplete previous week. In respect of money conditions, however, there has been a change towards ease. On Friday last the firmness of the pre-Puja days was heightened for a while; but it did not prove to be lasting and Saturday saw a resumption of easy money conditions. This ease has persisted through this week also, though funds are still usable. Call money is quoted one per cent. and the ease is more pronounced in Calcutta than in Bombay. The heavy applications for sterling at the last tender day and the consequent allotment of 13 per cent. may create the impression of a needy position in banks. But it is understood that the applications for sterling were made largely in Bombay, Calcutta's share being of very moderate proportions and some institutions refraining altogether from application.

The change in money conditions has not, however, affected the results of the sales of Treasury Bills. It is understandable that, owing to the holidays and the recollections of firm money immediately before the Pujas, sales of intermediates should have remained unduly low at Rs. 16¼ lakhs. But applications of tenders on Wednesday last amounted to Rs. 2,23 lakhs and the average rate of accepted tenders stands at Rs. 1-7-8 per cent. in contrast with Rs. 1-6-8 per cent. at the previous auctions. But considering that the market has had a net influx of Rs. 1,56¾ lakhs during these days as the excess of maturities over sales, and as easy conditions of money may not disappear too fast, it is reasonable to expect that the upward trend of Treasury Bills discounts will be arrested in the coming week. In the remaining days of October and in the first week of November, the maturities of Treasuries Bills are particularly heavy; and this is a circumstances which encourages the belief that lower rates for Treasury Bills will be forthcoming in the coming weeks.

Another circumstance tending to strengthen such belief is the abatement of the interest of investors in Government securities. Giltedge would appear of late to have had a check in its progress towards higher levels of prices. The end of the holidays sees a definitely lower level of prices. While at the beginning of the Pujas 3½ per cent. Paper was quoted at Rs. 91-12, on Saturday last it dropped to as low as Rs. 91-2. This was attributed at the time to the stringency of money conditions; but the fact that Government securities did not recover on the reappearance of easy money created the suspicion that a change is coming over the attitude of investors and operators in regard to Government securities. During the holidays in Calcutta, the London giltedge market was stagnant; and it is natural that the Indian giltedge market, which had for a long time been deriving its impetus from London, should be impressed with the absence of movement in India sterling securities. But, as in the case of money conditions, so in the case of the London market also, the disappearance of the supposed cause has not made much of a difference. The dull tone of giltedge has persisted through the week, and though advices from London indicate a firm tone in India sterling securities, 3½ per cent. Paper has sagged below the level of Rs. 91-10. The medium-dated loans have been easier owing to the absence of business; and it is believed that investors are turning more and more to ordinary shares as being for the moment a better avenue of investment.

In our last issue we referred to the growing interest and the increased activity in shares in all the sections and at the various centres. There has lately been a setback in the progress on these lines, though it would still be incorrect to say that interest in ordinary shares has abated. What has happened is the reaction of the various share markets to relevant factors that emerge to view from time to

time. For instance, in Imperial Bank shares, which rose on the rumour that the Bank was making arrangements to secure a good footing in exchange banking through understandings with well-established banks, had a setback, partly owing to the earlier excess, and partly owing to scepticism about the truth of the rumour. And during this week Imperial Banks have again gone up owing to a revival of faith in the rumour. Likewise, in coal shares opinion seems to be equally divided over the prospects of the two measures likely to impart strength, namely, the Restriction Agreement and the Agreement about the rates for tenders. The facts of the position are, indeed, such as to preclude any decisive or confident judgment and in such a position changes in rates are inevitable.

In cotton textiles there is the report that the mills of the Western Presidency are heading for over-production. That most of the mills in Bombay are working double shift cannot be gainsaid. The system came into vogue at the time of the closure of the Currimbhoy group of mills, when the other mills felt it desirable to make up for the reduction of output on this account. And it has latterly strengthened and spread over other centres, owing to the fear of legislation in the New Year regarding a nine-hour working day. At the same time, the drop, which has occurred in the price of silver is believed to affect adversely the potential demand for cotton goods in the coming months. For it is generally assumed that the purchasing power of the masses in this country in regard to necessaries like clothing is determined to some extent by the value of their holdings of silver. All this belief is lent much substance and force by the coincidence of the rise in the price of mill shares and the rise in the price of silver consequent on the imposition of the export duty on silver in China. In the same way, the setback in cotton mill share prices has coincided with the drop in the price of silver. It seems somewhat far-fetched to connect silver prices with the value of cotton mill shares in India. But it has a place in the view that we have taken that, despite the arrest in the improvement of share prices, the general interest in ordinary shares has not abated. In the jute section in Calcutta the announcement of the dividend of the half-year ended September in the case of Howrahs has been considered very satisfactory and prices have responded accordingly. It is very significant of the attitude of investors in jute shares that the imminent sealing of two and a half per cent. of the looms from November has not made any difference.

It is important to remember that shares and Government securities would alike be affected by the trends of business during the busy season which normally should have begun by now. It cannot be said that as yet there are any reliable signs of the onset of the busy season. There is, so far as one can see from a talk with bankers and businessmen, a noticeable change in the psychology. With the feel of the first nip in the air, one begins to persuade oneself that the time for better business has come But the change is still confined to individual psyhcology. In such an attitude of mind, one might, perhaps, attach significance to the increase shown in the recent statements of the Imperial Bank in loans and cash credits and the fall in the cash percentage. The improvement in the prices of hessian during the week encourages the hope that exports might make a better showing. But the prospects of raw jute are far from bright. For the present season exports are expected to be only about 38 lakhs of bales as against 42 lakhs of bales in the 1933-34 season. The tangle of import restrictions in Germany must make for a severe cut in the offtake of one of India's principal customers of raw jute.

This leads us to the point that the Rupee-rate during this season might not derive much strength from the balance of trade. One may in this context look a little closely into the trade figures.

The improvement in the exports which was noticeable in April and May has not been kept up during the months following. While in those two months, the exports showed a clear increase of two crores over the corresponding period of last year, there has since been a tendency towards an actual decline in the months following. Exports in June last were clearly less than in June, 1933. While July showed a small increase of 33 lakhs over July, 1933, August had a big drop from Rs. 14 crores in 1933 to 12 crores in 1934. The figures for September, show that the total exports including re-exports amounted to only 12.07 crores. Though this compares very favourably with the 11.61 crores for September, 1933, it has not at all made up for the loss in August. And what is even more important, throughout the last half year and more, imports have been increasing at a much faster rate than our exports. The tendency towards decline in the favourable balance has been strengthened during the year. The visible balance of trade has declined from 288 lakhs in August to 254 lakhs in September. When it is added that the visible balance was Rs. 890 lakhs in favour of India in July, 1933, the change in our balance of payments may be easily understood.

The exchange market was steadier during the week banks doing business at 1s. 6 3/64d., for January and 1s. 6 1/32d., for March.

The closing rates are: 1s. 6 3/64d., T.T. till December; 1s. 6 1/32d., T.T. up to March 15; 1s. 6 1/64d., April T.T. and 1s. 6d., Monsoon months T.T.

Bills were quoted: 1s. 6 5/32d., Ready and 1s. 6 1/8d., up to March.

Money was easy call money quoting from ½ per cent. to 1 per cent. Onemonth deposits quoted ¾ per cent. and twomonth and threemonth 1 per cent.

1677

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

Thursday evening.

The extension of the usual period of review of foreign exchanges in these columns to a fortnight has afforded a relatively long perspective, and one is able better to appreciate the trends of this period. It will be seen from the table at the head of this article that not only has sterling recovered from the upsets of the week in which King Alexander of Yugoslavia was assassinated at Marseilles, but it has also appreciated very considerably over its previous levels. From as low as 4.92 the American cross—rate went up to 4.98¼ on Wednesday last. The sterling-franc rate has improved from 74.06 on October 11 to 75.46. The London price of gold, too, has accordingly declined from 143s. 3d. to 139s. 10d. during the same period. The chance that has thus occurred over the sterling exchanges is unmistakable, and the fact that the improvement has persisted over a fortnight without any major political or economic upsets on the Continent or in America shows that there are more fundamental factors working for the strengthening of sterling. If one were obliged to write this review at the end of last week, it might have been necessary to be more cautious in referring to the recovery of sterling and to desist from regarding it as a positive appreciation. But, as it is, consistent appreciation over the period of a fortnight is a circumstance which must be accorded independent significance.

What has been behind this marked and relatively prolonged appreciation of sterling? Taking the quotations from day to day, it has not been an unbroken rise. The rates sometimes show a noticeable fall ; but the extent of the fall and the recovery subsequent thereto leave no room for doubt that they are of the nature of the inevitable fluctuations of the foreign exchanges and, that in any reading of the present position in the foreign exchange markets, they need not be taken too seriously. If then, the rise must be treated as consistent and steady, one can only attribute it either to the intrinsic position of sterling during this period or to certain pronounced tendencies in respect of the foreign currencies. On a closer examination of the position, we are inclined to suggest that both these factors have come into play in the present phenomenon of the rise in sterling.

So far as the intrinsic position is concerned, it seems reasonable to suggest that the seasonal pressure on sterling has not only relaxed but has drawn to a close. It is, indeed, very difficult to say how much of the seasonal demand for dollars has been met and how much of it still remains to exert its downward pressure on sterling. One can only point out the the relevant facts in this regard. It will be remembered that this seasonal pressure started much earlier this year than usual and, though at that time there were considerable differences of opinion as to the exact cause of the slump and the exact extent to which anticipation of seasonal demand had come into play, it was agreed that commercial demand for dollars was one of the factors. It is also learned that three weeks ago the commercial demand for dollars was exceptionally heavy. The slump in sterling during the time in which the seasonal pressure was at its highest was very marked ; and it is too much to suppose that the appreciation in sterling, which has occurred this fortnight, could have taken place in face of the continued demand in London for dollars on account of payment of American imports. Taking into consideration all the circumstances, it is far from improbable that the seasonal pressure has played itself out.

This view is strengthened by the fact that there have been no major upsets in the position of Continental currencies. By "major", of course, we mean developments like the bear attack on the Belga and the intense nervousness which not unoften occurs in regard to the prospects of the gold standard currencies, owing to the spectacle of an unbalanced budget or the failure of a Continental legislature to face up to the problem or the balancing of the budget or the balancing of international payments. But this is not to say that the Continental currencies have had during this time altogether smooth sailing. It must never be forgotten that throughout the last half year there has been a pronounced undercurrent of pessimism in regard to the gold currencies. Whether it is the difficulties of the gold countries in bringing about the readjustment of costs and prices and internal and external prices, or whether it is the fear that America is contemplating a further cut in the gold value of the dollar, or whether the British Government is believed to be working for the old parity between dollar and sterling, the nervousness in regard to gold currencies has continued more or less unabated. It is, in fact, due to an appreciation of the intrinsic difficulties of the gold standard countries in the way of their maintaining their overvalued currencies. And unfortunately there was a needless demonstration of their weakness in the recent conference of the Gold Bloc. The Conference, far from being an affirmation of the ability and willingness of France, Belgium and Holland to maintain the currencies, only ended in parading their weakness. It is now learned that France went into the Conference more for the sake of form and a preservation of appearances than in abundant faith in the utility of the Conference. Not to go into greater details on this question, the major results of the Conference have only confirmed the fears of Continental investors and strengthened their desire to keep their funds in London.

It is necessary to recognise that in regard to this influx of funds into London, the occasional weakness of sterling does not act as an impediment. For when sterling weakens, normally a Continental investor may take one of two views. He might regard it as an evidence of the instability of sterling and, consequently, as a warning not to keep his funds in London, or he may think that the currency which he is out to buy has providentially grown cheaper. After all, what the investor is seeking is not the mirage of a stable currency but to choose the least unstable of the existing currencies. While the extent of the fall in sterling may be fairly gauged, the probable depreciation in the gold standard cannot be foreseen. It is only thus that the flow of funds into London has continued unimpeded during a period of considerable oscillation in sterling. It is learned that the excess of imports over exports of gold during these months of 1934 amounts to about £116 million. If our view is correct, the future of sterling in the remaining months of this year must be deemed to be very bright, indeed.

It might be thought that the difficulties of maintaining the gold standard will affect only the Continental currencies and that any crisis in the Continent would leave the dollar untouched. In that case there could be no appreciation in sterling in terms of the American currency. But such a view would ignore the fact that the dollar is a gold currency and bears a definite statutory parity with gold. The frequent talk of a further cut in the dollar often obscures this fact ; but so long as the dollar is linked to golf, a fall in the Franc of the Belga must reflect itself in a fall in the dollar though the latter would not be to the same extent as the former.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

Complete catalogue sent free on application.

CONGRESS IN CONFUSION ?

The developments of the last fortnight in Indian politics are such as at once to invite and defy attempts at interpretation. Those, who are intimately concerned are naturally swayed by feelings of regret or exultation at the turn events are taking ; and those, who, like us, are content to stand aloof and satisfy themselves from time to time that the trends of Indian politics are, at least in the long view, healthy and sound, have expended much labour in observation and thought ; but so far to no purpose. It is normally easy to summon one's reserves of optimism and faith in the high destinies of the nation and assure one's self that all that happens is for the best. But in the present conditions, when the country is faced with the threat of a new constitution, which even those who had a share in making it are far from proud of, and which contains the seeds of decay for such healthy political life as we may now claim, the importance of the state, and the relative strength, of parties can hardly be underrated ; and the fatalism which sees in every disaster a painful milestone on the march of progress is but a broken reed to lean on. No amount of faith in the future can absolve contemporaries of their responsibility to sift and judge the current trends and contribute to the store of thought that goes to make the future.

* * *

A Congress that aspired to function as a rival government ended with a tame acquiescence in all the measures of repression. Mass civil disobedience, formidable at the start, quietened into individual civil disobedience, and was later reserved as the special prerogative of its sponsor. The jails were at one time filled with political prisoners and the country swarmed with all classes of Congress workers ; and with the Gandhi-Irwin Pact in mind, the people looked for more demonstrations of the strength of the Congress. But all such hopes were quickly dispelled. It is true that the breakdown of the movement did not come as a surprise, except to a few who wantonly overlooked the realities of the position. But it was believed that the task of reconstructing the Congress organisation and making it function as a live political force was well within the capacity of its leaders. There was, inevitably, the painful process of living down the surrender and formulating a programme which, while it eschews everything that might involve a suicidal tussle with the Government, would keep alive the spirit of resistance, which is as essential to a free country as to one which is under foreign rule. The Congress, it was known, had no choice but to get back into its shell ; but there was confidence, too, that it would not go to sleep or otherwise cease to be reckoned with.

* * *

How far have these hopes been fulfilled ? The re-adoption of Council entry and the formation of a Parliamentary Board conveyed to most of us the impression that the Congress had regained its touch with realities, that it had overcome the paralysis which followed the break up of Civil Disobedience and that it had found the means of functioning actively in our political system. But there was also the apprehension that much water has flowed under the bridges since Pandit Motilal Nehru led a unified band of Congressmen in the Assembly and gave a striking demonstration of the discord between the voice of the people and the voice of the Government. To-day, there is no body of reforms, political or economic, which may be presented without fear of dissent even among the ranks of Congressmen as the National Demand. On the political side, the Communal Award is the apple of discord as much amongst nationalist Hindus as between Hindus and Muslims. On the economic side, the rising tide of socialism has started to lap the feet of King Congress. In vain has Congress pleaded for amity among the classes. In vain has it assured impatient youth that under its aegis social justice would prevail. It is not easily overlooked that India has of late its big business which will know what to do with political power when it comes its way. The dissentient voices which are often heard, when a measure of protection is before the Assembly, is an aminous reminder that the days of unified national demands are being left behind.

* * *

The Congress was visibly restive under the growing complications. But what staggers that great institution now is not a sense of the difficulties of running a disciplined party in the Legislature—though, in all conscience, they are serious enough—but the imminent loss of Gandhiji's leadership. It is nearly a decade and a half since people ceased to use the plural in reference to leadership in the Congress. Gandhiji has led the Congress in the truest sense of the word, that is, in the sense that he felt clearly within himself the vague aspirations of the rank and file, gave them a form and the motive power for efforts to realise them. He has led the Congress leaders, too, so-called, in the more commonplace sense of subordinating their will to his own. There has always been a hiatus between the Leader of the Congress and the Congress leaders, which often expressed itself in the latter's desire for a line of activity which the former would not participate in, but would not seriously discountenance. There was thus great exultation when Council entry was officially adopted and the wind-bags let loose to fight the wordy duels which form an election campaign.

* * *

Ere yet the leaders could claim the prize of their new found freedom, Gandhiji has burst the bombshell of his resignation from the Congress. The statement, in which he announced this decision, was, as might be expected, couched in the most unexceptionable langauge. Those whom it hurts most could least complain of its tone and content. It disarms criticism, every conceivable criticism. There can be no recrimination ; for he is not going away "in a huff." There can be no charge of desertion ; he is always at the behests of the people. There is no taking umbrage ; he charges no one but himself. There can be no argument on the merits; the reason adduced is that he has lost the power to persuade and nothing more decisive can be thought of for a leader's resignation. And what is more, few people can think of the exact manner in which Gandhiji can help the political programme in its present form.

* * *

Yet the consternation is unparalleled. And it is at its height among those who had wished most for a free hand for themselves. This is understandable; for the Congress leaders had thought of ruling with Gandhiji content to resign; and the vision of power without responsibility seems to melt into thin air. Hence the importunate entreaties, the passionate appeals and occasional shock tactics which characterised the sessions of the All India Congress Committee;

all of which left Gandhiji unmoved. It is not suggested that Gandhiji meant to administer a sharp rebuke to presumptuous incompetence. But one may set it down as one distinct gain in what seems otherwise an unrelieved misfortune.

* * * *

There is no sign of Gandhiji relenting from his published decision; and it is necesary to try to assess its significance to the future. With a notable freedom from political partisanship, *The Statesman* sees in Gandhiji's retirement the assertion of the forces of realism over idealism. One might make light of this criticism as yielding to the temptations of profundity in the interpretation of current events. But the reasons which according to Gandhiji impelled him to this course lend force and substance to the view of *The Statesman*, which, incidentally, sets this event in the wider background of the world at large, where the idealism of the post-War world and the rosy dreams of Socialists and Communists are leaving behind a bitter disillusionment. But the vital question in this instance is whether the disillusionment is Gandhiji's or that of his followers and the country at large. We are inclined to think that it is Gandhiji who has suffered a painful disappointment. In his case it is not disillusionment ; for Gandhiji, as we understand him, is the one idealist who has dreamed his dreams without losing his sense of the real. Without under-rating the dross in men, he has laboured to turn them into pure gold ; and his apparent self-reproach that he has lost the power to persuade is, in reality, an indictment of the material he has handled.

* * *

If Gandhiji's retirement were really due to the assertion of the popular sense of realism, it should be possible to find parties and groups ready to work practical programmes in pursuit of aims which Gandhiji may be supposed to have failed signally to achieve. Who are those who aspire to succeed Gandhiji in the direction of policy ? On the one hand, are the Congress leaders, who were anxious to run the Congress along the safe and customary lines of party politics, electioneering in the country, speaking and voting in the Councils, with an occasional walk-out to relieve the monotony of listening to their own voices and waiting for the progress which time may be expected to achieve. On the other hand, are the Indian Socialists, who are yet a far from compact body and who have still less of clear cut ideas capable of being embodied in definite measures of socialist reform or even socialist propaganda. The difference between each of these groups and Gandhiji is not such as to make for a more practicable programme of action. All that the Congress leaders want is freedom from the obligation to spin and weave. If they point to truth and non-violence as impractical, they know that no more practicable is violence. The Socialists might be thought to be more realistic, so far as political programme is concerned. But the talk of peasants' and workers' republic cuts no ice. Every one in India knows that, though urban workers are now being familiarised with this talk, to the peasants in rural areas, it is all a jargon without meaning. We have examined carefully the resolutions of the Indian Socialist Party and are only impressed all the more how premature is this talk of Socialism in this country. The role of true socialists in India is not to create dissensions among classes or cleavages among parties, but to keep a watch over economic policy in the interests of the many and expose every attempt at exploitation of the masses. It is, perhaps, of even greater importance to spread correct ideas and create and widen the common ground between all men of good will. In other words, the task of true Socialists is predominantly educative. Even in the most advanced countries of the world practical programme is the weakest point with Socialists ; and it should be more so in this country where conditions, means and ideas are alike immature.

* * *

It is thus idle to hope that the forces of reconstruction would emanate from the Socialists. If even simple political freedom is not understood by the masses, how much more unfamiliar to them must be ideas of state ownership or collectivism? As for the Swarajists, we have already pointed out the difficulties of repeating the performances of Pandit Motilal Nehru and Mr. C. R. Das. At any rate, they would fail miserably in bringing about the pressure needed for effecting the desired changes in the constitution.

* * *

In these circumstances, one would be inclined to think that for some time Indian politics is doomed to drift. So far as parties are concerned, drift might, perhaps, be inevitable. But if what matters is the building up of the nation, then there is no need for despair. For as he leaves the Congress, Gandhiji has made ample provision for the essential activities of national reconstruction. In addition to handspinning and weaving, about the benefits of which scepticism is naturally persistent, and Harijan work, he has now initiated the All-India Village Industries Association on the lines of the All-India Spinners' Association. These bodies are to be rid of every vestige of political association, and those who have clamoured for the retention of Congress sovereignty have not been able to make their voices felt. The effect of Gandhiji's withdrawal and the formation of these autonomous associations would be to leave the Congress to scratch the barren soil of elections and Councils.

* * *

The wisdom of the course adopted by Gandhiji can be realised only if one tries to understand the exact reason for the present impasse. The activities of Congress and Government alike during the last few years have shown clearly that no progress can be made in

the solution of our problems till more attention is paid over a period to basic constructive activity. Without such a spade-work, not only the work of the Congress, but even the smooth working of the White Paper or any Constitution will be jeopardised. The career of the Mahatma shows that, while normally he is fully aware of the task of preparing the people, he is often overcome by impatience and precipitates a movement the strain of which would not be borne over a period. The difficulties which are present in the way of such mass movements equally dog the steps of the politicians when they try a Hindu-Muslim agreement or other similar patchwork. The Socialists, too, betray lack of touch with reality, when they believe that these obstacles can be dissipated by uttering socialist war cries. If they mean to create a Socialist society, they should make common cause with Gandhiji and work unceasingly for toning up the mental and economic life of the masses. So long as they refuse to do so and so long as Congress leaders believe that the facts of our political conditions can be talked away in a forum, the retirement of Gandhiji can hardly be represented as the triumph of realism over idealism. Nor can it be viewed as an assertion of Leftist tendencies in the Congress. For Gandhiji is hard to beat either in his sense of realism or in his Leftist tendencies. The fortnight's happenings can only be regarded as Gandhiji's attempt to awaken the Congress to a sense of reality and its duties to the country and the masses. And there are signs that he will not fail.

RAYMOND POINCARE

The death of M. Raymond Poincare has removed one more of the European statesmen who must, in the eyes of posterity, jointly bear the responsibility for the catastrophe of 1914. The credit of manfully bearing the burdens of the War is in most cases mingled with the opprobrium of bringing it on. Dressing a wound is hardly any atonement for causing it ; and it might seem particularly cold-blooded to rush a whole people into a terrific war and then courageously take them through the purgatory. In such a view, the death of European statesmen should leave most people strangely unmoved. But this view is an undue simplification of the psychology of Premiers and Ministers in the years immediately preceding the War. The Great War was not the result of malevolent Ministers conspiring against the peace of the world. It was a natural phenomenon which Ministers could not individually help. The more far-sighted saw it ahead and essayed to provide for the safety of their own country by increasing armaments at home and strengthening alliances abroad. It is the tragedy of international politics that every such attempt at safety had also the effect of heightening the danger and bringing it nearer. It may be that European statesmen in the early years of this century were not angels of peace. Nor, for the matter of that, are they, even to-day. But to fasten war guilt on those who tried to protect their countries in its event is hardly fair, to say the least of it.

* * *

Even the most enlightened standards of the times did not regard the avoidance of war as the prime task of a Cabinet Minister. Statesmanship lay in making the most of every outburst of belligerence and running off with the prizes of victory. Communal ethics lags farthest behind in the march of human progress ; and those who identify themselves with the communities in which they were born bring their individual standards of conduct in conformity with the supposed interests of the community. Men, who would uphold the highest probity in their individual life, do not regard anything too low to further the national interest. Thus it is that statesmen regard War as business, on a national scale, without the element of service. They saw in faithful and efficient service to the people, as they conceived it, an ample atonement for the dubious methods of their diplomacy.

* * *

If men ought to be judged by the standards of their times, the great men who held the helm during the dark days of the War ought to remain as shining examples of selfless devotion to their people. In the bitter disappointments of the Disarmament Conference and the breakdown of the fragile facade of world peace, we are apt to be too hard on the men who, if they were unconsciously responsible for the War, consciously strove to end it. And the French statesmen are apt to be, and have been, more harshly judged than their confreres in other countries. For the position of France in Europe is such that her rulers can hardly afford to flirt with peace. It permits of no easy sentimentalism. It enforces a rigid sense of realism and a vigilance towards every potential danger. It does not permit any underestimate of the risks to which she is exposed. Unlike England or America, she is bound to be in the vortex of every war and the stakes, too, are bound to involve the life and death of the nation. No wonder, therefore, that every patriotic Frenchman is keen on maintaining the national armament at the highest pitch of efficiency and every French Government is ceaselessly engaged in making alliances and counter-alliances. It might be that the best security of a country so placed lies in lasting good will among the nations and an abiding world peace. But it is too much to expect that Frenchmen will stake their national existence on the perilous adventure of world peace. French statesmen have naturally been adroit in offensive and defensive alliance, grimly resolute in the conduct of war and remorseless in their terms with the vanquished. This has prejudiced them in the estimate of the

world at large and more so during a period in which most of Europe's troubles might be traced to the Treaty of Versailles.

* * *

Yet these can hardly obscure the effulgence of statesmen of the type of M. Poincare. Born in the frontier of a country which always feels like sitting on the mouth of a volcano, he was more relentless in the pursuit of France's enemies than most of his compatriots. Even M. Clemenceau, who never showed Germany and clemency, which he could help, pales in comparison with M. Poincare in vindictiveness towards France's historic enemy. The latter's resignation from politics after the victory was due to his differences with M. Clemenceau. Yet the manner of the retirement shows a public spirit and an ability to subordinate self for which most countries look in vain in their own public life.

* * *

Statesmen in France are generally of bigger proportions than those in most other countries. They are surely made of sterner stuff ; and to Frenchmen, it must be a matter of pride to watch the giants grow to their full stature. M. Poincare's political career is in many respects unique. Though he shared in common with other French politicians of the front rank the frequent shuffling of ministerial offices and the surprising changes from presidency to premiership, there is noticeable a steady preparation for the two crowning achievements of his career, the winning of the War and the reclamation of France from financial anarchy. Opinions may vary for a long time as to whether the diplomacy which culminated in the War is a matter for pride. But there can be no question that M. Poincare's financial administration leading up to the stabilisation of the franc in 1928 is a masterpiece of statesmanship. It shines all the more in comparison with the blunders of the British Government in regard to the return to gold. The problems which faced the British are nothing compared to those in France which sent Government after Government to a deserved doom and impelled the French nation to turn for succour to M. Poincare, who was then in retirement. The measures, which the aged Premier adopted, are worthy of being engraved in gold. Taking advantage of the strong public opinion which had been created in favour of financial stability, M. Poincare caused the National Assembly to pass, as articles embodied in the constitution and therefore not at the mercy of political changes, regulations for the establishment of an automatic sinking fund to which would be attributed funds which could not be touched, namely, debt duties, revenue and tobacco monopoly, etc. All these heroic measures in the cause of the national budget revived confidence in the franc, which consequently rose from the level of 264 francs to the pound to 124. This achievement was completed by December, 1926 ; and thereafter M. Poincare maintained a *de facto* stabilisation of the currency ; and when in the general election of 1928 he secured a majority which approved of his policy he put the *de facto* stabilisation on a secure basis.

* * *

The administration of the exchanges in countries like Britain and America since then have shown the wisdom and resoluteness with which M. Poincare accomplished the very arduous tasks that faced him in 1926-28. When we remember that it is only lately that the economists have come to understand the value of a *de facto* stabilisation as a preliminary to statutory stabilisation, it will be appreciated that M. Poincare showed admirable insight in deciding on pursuing such a course in a period in which the problems of the exchanges were, comparatively, little understood. Equally commendable is his action in incorporating in the constitution the provisions for an automatic contribution to sinking fund. Every publicist ought to remember these measures, in order that, when the time comes, it will be possible to urge similar measures of defence for his national finances.

It should, perhaps, be necessary here to refer to the feeling which has been engendered of late that M. Poincare was responsible for initiating in the realm of finance the same spirit of uncompromising belligerence which actuated his political life in and about the years of the War. It is true that M. Poincare saw more clearly than most of his contemporaries that in the third decade of the century the power of the nations would depend largely upon their financial strength and that the ability of France to secure her ends in international politics would be greatly augmented if she had large holdings of gold and if her ambassadors added to their usual equipment of knowledge an understanding of the problems of international finance. Here, as in the pre-war politics, M. Poincare only provided ahead for what he saw clearly to be the growing tendency of the period. But it is certain that the story of France initiating a financial diplomacy aimed at weakening the position of other international financial centres and thus deriving an undue advantage was purely a figment of the overwrought Mr. Paul Finzig.

COCOANUT IMPORTS FROM CEYLON

The Ceylon Cocoanut Bill which will shortly be placed before the State Council provides for the creation of a Products Board, a central sales room where copra can be sold by auction and a propaganda campaign. A cess on cocoanut products for import will be imposed to meet the expenses of the Board. Propaganda is to be active in India and a congenial

atmosphere of goodwill is to be created by Ceylon Trade Commissioners, in view of the feeling of Cochin and Travancore growers that a tariff should be levied on Ceylon products to protect the home industry. In our issue of September 15, we referred to the results of the investigation made by Mr. Patel under the direction of the Imperial Council of Agricultural Research on the relative costs of production. In 1932-33 Ceylon had 11,00,000 acres under cultivation ; Phillipine Islands 13,61,126 acres ; South Sea Islands (British) 5,68,450 acres ; British Malaya 5,99,747 acres ; Dutch East Indies 9,50,000 acres and India (including Burma) 13,59,273 acres. The average yield per acre in Ceylon is 2000 whilst in Travancore it is 1,750 and in Malabar 1600 nuts. The cost of production in Ceylon is Rs. 15 per 1000 nuts ; in Travancore Rs. 15 and in Malabar Rs. 20. The income in Ceylon per acre is about Rs. 44 ; in Travancore and Malabar about Rs. 35. On the average of 1902 to 1932 India imported nuts to the value of Rs. 8 lakhs. Naturally India with her considerable internal production looks with disfavour on the dumping of Ceylon cocoanuts ; and the demand has been made that, if the danger of the Ceylonese imports should continue, the Government should take action to safeguard the interests of the Indian grower. The Government of India have been prone to emphasise the dangers of any action against the import of Ceylonese goods into India. But they should also recognise that when free imports of a certain class of foreign goods have the effect of impoverishing whole districts, they ought to move in the matter and explore the chances of an understanding with the importing country, in order that the threat of dumping and the threat of retaliation may alike be eliminated.

INDIAN FRUITS ABROAD

India's climate ranging from ice cold to tropic heat is favourable to the growth of a large variety of fruits. From the humid plains of Bengal where the mango and the banana grow in profusion to the cool heights of Kulu where the apple and the pear are the delight of the poor, India is essentially a fruit-laden country. Oranges, lemons, limes, citrons, pomegranate, pineapples, mangoestein, lichees, melons and papiyas are, in addition to the banana and the mango-seasonal fruits which satisfy every taste. Their prodigality in normal seasons is proverbial. The neglect of the commercial utilisation of this great gift of nature reflects India's industrial immobility. There has been of late a realisation of the potentialities of a fruit industry ; but the realisation has not advanced much beyond the academic stage.

* * *

In 1925 a Mango Marketing Committee was appointed by the Bombay Government to explore the near home market for mangoes. The Committee reported that the soil and climate of Bombay are not so suitable for growing high class mangoes as the laterite coastal region of Ratnagiri and Kanara, drawing attention at the same time to difficulties of transportation, to bad packing and to plucking immature fruit. Nothing constructive was done till two years ago, when an experimental shipment of Bombay mangoes to London at the suggestion of High Trade Commissioner created considerable interest. The mango, delectable in this country, is practically unknown on the London market and it was found not easy to create a demand. Subsequent shipments were in excess of consumption ; and disabilities of transport ruled out regular supplies. Consignments were sent via Marseilles reaching London overland as through shipping facilities in cold storage direct to London are not available. Cold storage experiments are now being made at Poona under the direction of the Department of Agriculture, Bombay, to determine the temperature at which mangoes can be carried overseas without deterioration. Once this essential problem is solved and cold storage shipping facilities provided, there is no reason why Indian fruits in general, and mangoes in particular, should not take their place at the breakfast table in London and Paris. What London tasted on the trial shipment was a fruit not in good condition and it is not surprising that mangoes are not yet favoured by London housewives.

* * *

Much the same result accrued from an experimental consignment of mangostein by the Agricultural Department in Burma. Most of the fruit showed deterioration during the passage, while others were infected. The Department of Scientific and Industrial Research in London, which has taken the place of the Empire Marketing Board, suggest that orchard roots must be controlled and uncontaminated by insects before mangostein can be popularised in England. Bananas and pineapples from India delivered in London had to be destroyed. An attempt was made to introduce Nagpur loose-skinned oranges to the French market ; but the venture died out on a not too flattering first reception.

* * *

The bye-products of many Indian fruits, such as syrup, preserves and chutnies, find a growing market in India ; but their quality and canning suffer from competition abroad. The commercial and industrial development of India's fruits is still a practically untapped field of exploration. Enterprise backed by a little capital and more of careful research would quickly convert a vast wastage to an economic asset.

GROUNDNUTS

The reduction in the acreage under groundnuts recently announced is a poignant reminder of the parlous state of this staple product. Madras, Bombay, Burma, Hyderabad and Mysore produce ninety six per cent. of the total groundnut area in India. In 1933-34 the estimated area under groundnuts was 8,115,000 acres and the estimated outturn 8,235,000 tons, Bombay contributing in 1932-33 1,077,000 acres, Madras 3,517,000 acres and Hyderabad 1,118,000 acres. In 1931-32 production was 2,276,000 tons, having fallen by 28 per cent. from the previous season's plentiful crop of 3.2 million tons. The second Memorandum on the crop in Bombay (excluding Sind) issued by the Department of Agriculture states that on an average of five years ending 1932-33 the area in the Presidency represents about 23.1 per cent. of India's total acreage. The estimated area in Bombay Presi-

dency proper up to October 1, 1934, is 1,504,000 acres. The area in the Madras Presidency up to September 30, 1934, is estimated at 1,937,000 acres compared with 3,211,200 acres at the corresponding period last year. The decrease is general outside Chingleput and the East Godaveri District and is due to insufficient rain at sowing time as well as to the fall in prices. In Guntur, the Deccan, the Central and Southern districts and in Bellary the shrinkage is marked.

* * *

No one, we are sure, will underrate the place of groundnuts in our foreign trade and our balance of payments. In 1931-32 exports amounted to 6,71,973 tons valued at Rs. 10,13,68,582: 4,33,012 tons valued at Rs. 7,12,21,864 in 1932-33 and 546,546 tons valued at Rs. 6,63,11,466 in 1933-34. The drop in value against an increase in production in 1933-34 compared with 1932-33 is accounted for by the low level of prices in the importing markets, France being the biggest buyer of Indian groundnuts with Germany, Netherlands and the United Kingdom following in the order named. Madras as the principal producer is hard hit by the fall in price which recently dropped from Rs. 50 to Rs. 15. This slide is attributed to the operations of a buying campaign in Madras which interposes between producers and mills who are the ultimate consumers. On an economic basis without the presence of profiteering middlemen, groundnuts should fetch much higher prices, judging from the price at which groundnut products sell in the Indian and world markets. Those who are interested in groundnuts have urged the Government of Madras to take measure to rescue the trade from the tyranny of foreign consumers.

* * *

As action on these lines might involve interference with the trade the consequences of which cannot be foreseen, the Governor of Madras would be well advised to expand the consumption of groundnuts within the country. We have urged before in this connection the need for expanding domestic consumption. Thanks to the inauguration of hydro-electric projects, which supply electric power in many of the groundnut-growing districts of the South, it should be possible to bring about the establishment of industries which would extract from groundnuts oil for different purposes. For instance, the prospects of groundnuts as a raw material for edible oil would, indeed be very bright, once the technique of deodorising it is perfected. This is a matter for research. But in the sphere of economic policy, it would be necessary for the Government to afford protection to the new industry against imported vegetable ghee. Though on this occasion the reduction in acreage may be due in part to the drought which is prevalent in the South, the fact that the drop in prices has also had much to do with it, shows that it is high time that the Government get moving in this matter.

THE GREAT DEPRESSION

Amidst the variety of views on the recent misfortunes of the economic world, one thing has been clear throughout, that the depression has depressed economists more than even trade or industry. Socialists of every shade have treated the slump as the golden opportunity to discredit forever the equilibrium of *laissez-faire,* and most economists have quailed under the relentless and unceasing fire of criticism from what seems a limitless army of deserters from individualism. When men like Mr. J. M. Keynes have given their blessings to isolationism in monetary and economic policy, the citadel of orthodox economics may be said to have been stormed.

* * *

In the volume on *the Great Depression,** Mr. Robbins returns to the attack. And it is not in the

THE TATA IRON & STEEL
COMPANY, LIMITED.

JAMSHEDPUR, TATANAGAR, B. N. RLY.

THE JAMSHEDPUR TECHNICAL INSTITUTE

Session 1934-1935

1. The Tata Iron & Steel Company are prepared to consider applications for admission to the Jamshedpur Technical Institute, from Indians who wish to take up a career at the Company's Works, at Jamshedpur and who possess **any one** of the following qualifications:

Class B—A Degree or Diploma in Mechanical or Electrical Engineering or Metallurgy of a recognised Indian or Foreign University, Technical Institute or College.

Class A (1)—An HONOURS or First Class Degree or Diploma in Mechanical or Electrical Engineering or Metallurgy of a recognised Indian or Foreign University, Technical Institute or College, preferably accompanied by Works experience ABROAD.

Class A (2)—An HONOURS or FIRST CLASS Degree or Diploma in Mechanical or Electrical Engineering or Metallurgy of a recognised Indian or Foreign University, Technical Institute or College, accompanied by not less than 6 months continuous practical experience after graduation in an IRON & STEEL WORKS ABROAD.

2. The age of any candidate on December 31st, 1934, must not exceed:—

(1) Graduates in Engineering or Metallurgy Foreign Universities ... 27 years.

(2) Graduates in Engineering or Metallurgy Indian Universities ... 24 years.

3. Apprentices will be given a 2 years theoretical and Works Training at Jamshedpur, and during this period will be paid the following salaries:—

Class B	... Rs.	50/-	per month
Class A(1)	... ,,	75/-	,,
Class A(2)	... ,,	200/-	,,

4. Further details regarding conditions of apprenticeship, employment on its completion etc., are set down in the printed prospectus which can be had free on application.

5. Intending candidates should apply to the Superintendent of Training, Jamshedpur Technical Institute, P. O. Jamshedpur, *via,* Tatanagar, B. N. R.

6. No application will be considered after the 20th November, 1934.

J. L. KEENAN,
General Manager,
THE TATA IRON & STEEL CO., LTD.

JAMSHEDPUR,
11th October, 1933.

spirit of a romantic adventure, or out of fondness for the ideals of a bygone age, that he seeks to vindicate the wisdom of *laissez-faire* against the demands for economic planning, which issue from the babel of frustrated capitalists, unthinking Fascists and life long Socialists. Like the true scientist that he is, Prof. Robbins does not set out with any purpose other than the avoidance of errors, which seems at the moment to be more important than the establishment of truths. He is impatient of those facile generalisations which are the result, not of an examination of objective facts, but of a desire for sensation, or an anxiety to see in present trends the proof of past prophecies. Those who are acquainted with Professor Robbins through his writings would hardly need to be told that he is not swayed by such passions. He is neither a missionary nor a crusader ; and all that he would do is to bring his power of correct and disinterested thought to bear on the causes of the depression, and to suggest the remedies, in so far as one's reading of the causes might suggest them.

* * *

Whatever view one may hold of practical policies for the future—and differences are inevitable, for the objective is not in all cases a mere return to the past —there is need for a correct interpretation of the events and forces that led up to the great depression and the effects of improvised remedies and hasty expedients which the nations have adopted under its stress. The difficulties of such interpretation have tempted most people into the belief that it is not necessary. Economic self-sufficiency provides a haven from the storms of international trade ; and socialism, from the troubles of securing equilibrium within the country. But both are yet a long way off, if they are at all beyond the horizon ; and economic policies framed and pursued in ignorance of the causes of the depression and the results of amateurish planning might produce a welter which will cut us off alike from socialism and capitalism.

* * * *

From the standpoint of the student, the necessity of Professor Robbins's thesis is obvious. It is a hopeless lot in life to profess a science, which is to rest on obsolete practices and is apparently a bundle of discarded theories. The depression has blotted out all other topics, in the sense that economic theory has to be directly in reference to the problems thrown up by the depression. But the depression is a fertile field for controversy, the happy hunting-ground of doctrinnaires and dilettantes. Even men eminent in the science are seen to put forward theories which are at variance with very material facts, and which have been framed more or less to justify certain preconceived cures for the depression. It is not that these theories lack subsuccess in curing diseases of which they have a very suggest for the future are to be scorned. The policies are, indeed, well worth a trial. Doctors often succeed in curing diseases, or which they have a very incomplete scientific knowledge. But such doctors cannot offer any guidance to the student of Pathology ; and to the latter, the Professor, who would, conceivably, mismanage the simplest of cases, is an unfailing inspiration.

* * * *

It is in this spirit that one should go to Professor Robbins's analysis of the economic phenonenon of the great depression. Professor Robbins has shown an admirable resistance to the infection of current theories. He has amassed all statistical data relevent to a correct judgment of such theories, and proves to the hilt that our ideas of sterilisation of gold in France and America or fall in consumption demand having been responsible for the slump are grossly at variance with facts. He has no tender feelings for the propagandists of inflation or higher wages or bilateral trade treaties or even the panacea of planned economy.

His first task is to examine the background of the depression and the manner in which it developed. He analyses the ideas with which men generally proceed to consider the phenomena of the depression and shows them to be utter misconceptions. He dispels the notion that the breakdown of the gold standard was due to the deliberate transgression on the part of France and America of the rules of the gold standard game. He is particularly severe on those who have embroidered a sensational mythology round this idea. "If the rules of the gold standard game were broken," says Mr. Robbins, "it was not in France or America." By which he means that Britain is the most significant offender, as she did not follow up the implications of the higher parity which she deliberately chose after the War. The rules required that she should effect the deflation of currency and costs necessary to maintain the new parity ; and in as much as she refrained from doing it, there could be no obligation on the part of France or America to allow the influx of gold into their coffers to have its full effect on circulation and the balance of payments.

* * * *

This supplies the key to the interpretation of the world depression. The whole world is at one in its reluctance to take the lessons contained in the breakdown of a boom. The breakdown of a boom is a revelation of a wastage of capital. The progress of inflation and the downward course of interest rates have the effect of encouraging investment in fields which should normally be considered barren ; and when the boom breaks down, there is a painful disillusionment about the prospects of such concerns. It is commonsense that, if profitability is to be restored, costs must be cut and the capital resources rehabilitated. What the world has done is to neglect this essential task and seek relief in a number of palliatives for the pains in various parts of the economic system. And every such palliative has tended to aggravate the disease and render it more and more incurable.

* * *

The greater part of Professor Robbins's work is devoted to an examination of the evil effects of such palliatives. The measures adopted after the onset of the depression are, in his opinion, even more inimical to recovery than the failure to act up to the breakup of the boom. The standstill agreements adopted in the case of Germany are a particularly grotesque instance of propping up a condemned structure. It is true that such a measure may be adopted with profit in some cases. But the absence of any attempt to distinguish between good and bad debts is very significant. Less acceptable is Professor Robbins's condemnation of the attempts to expand consumptive demand. He cites statistics to show that there was no fall in consumptive demand from the level of 1928 and that, on the other hand, there was an actual increase in the various indices up till the year 1931. But the Professor's case against the attempts to stimulate demand by increase in wages and other remedial measures stands unaffected by changes in demand. For he takes the

view that the depression was in origin due to unwise capital outlay; and where reconstruction of wasted capital is necessary, it is unwise to make a fresh inroad into capital resources by an artificial maintenance of wage rates and dividends. In this analysis, restriction, which has more sanction in business tradition than the methods of Mr. Roosevelt's "New Deal," fares no better. For restriction, however soundly conceived and drawn up, would still leave the question of weeding out unsound enterprises untouched.

* * *

It will be seen from all this that the best means of recovery, according to Professor Robbins, lies in as near a return as possible to the conditions in which the rectification of blunders and maladjustments would be automatic. The cyclical course of boom and depression, which obtained in the past, is not a matter to enthuse over. But it is obviously preferable to the perpetuation of a depression through the adoption of harmful soporifics. The depression came on in the usual way owing to the excesses of a boom period. But it was rendered severe by a rigidity of the economic organisation unknown in previous depressions. And what is worse, it was accentuated by a refusal to take the proper remedy and persistance in a wrong course of treatment.

The first essential of recovery is a provisional stabilisation of exchanges; and the two governing principles, of such stabilisation are:

> First, that monetary conditions in different parts of the world should be kept in a relationship conducive to international equilibrium—that the local movements of money and credit should be such as to bring about those movements of relative prices necessary to avoid a breakdown of the regime of stabilised exchanges. Secondly, that monetary conditions in the world as a whole should be such as to avoid the creation of large fluctuations of trade and industry by the generation of inflationary booms.

International equilibrium requires that payments between countries should be put on the same basis as payments within countries. This seems the bitterest part of Professor Robbins's prescription, so far as the governments of the various countries are concerned. The implication that labour should not chafe at the reduction in wages necessary to restore equilibrium is a matter of the greatest concern to the working classes. Professor Robbins aptly points out that independent workers, those who do not work for wages, take the cut in their profits as a most natural result of a slump and are consequently better off during a depression than wage-earners who have to suffer prolonged unemployment. The danger of wage-earners refusing to accept the consequences of a slump is best illustrated in the monetary policy of Great Britain in the years following the return to the gold standard. It is an impressive demonstration of Professor Robbins's freedom from bias that he lays the prime responsibility for the breakdown of the gold standard on his own country. He is even more severe on the British Government for neglecting the advances which America and France made in 1932 for stabilisation of the exchanges and for throwing away a most valuable opportunity for avoiding competitive depreciation of currency. All this, Britain was impelled to do because of the unreadiness of the authorities to effect a reduction in wages.

* * *

Enough has been said to show that what Professor Robbins wants is a return to *laissez-faire*. He makes it quite explicit and anticipates the outcry which that expression nowadays gives rise to. And he makes it clear that, while he advocates *laissez-faire*, he is under no exaggerated notions of the extent to which that maxim was followed in the pre-War days. Alone of the dwindling votaries of free trade, Professor Robbins admits the imperfections of free trade practice in the past and stresses the fact that there is no necessity to make a Utopia of the past in order to condemn the blunders of the present.

* * *

While it does credit to Professor Robbins's understanding that he anticipates the criticism against his viewpoint, it should be obvious that to anticipate a criticism is not to answer it. Nor can it serve to disguise the fact that, while Professor Robbins is without bias in examining the various theories of the depression, he is not altogether disinterested. One suspects that he has not shaken off his preference for the equilibrium economics, which under the stress of the depression is fast falling out of favour. One suspects, too, that the Professor would not have acquiesced in the results of his enquiry, if they seemed to go against *laissez-faire*. The distinctive attribute of disinterested study is not only the freedom from the desire to support any material interest, but also the desire to put the acquired

Clive Street Gossip

Eavesdropper's copy which was intended for the last issue of "Indian Finance" was delayed in transit. But in view of its being a complete discussion of what he only touched on in his last Gossip, its interest for our reader is undiminished:

S. S. STRATHNAVER.
Oct. 3, 1934.

I had a bare ten minutes within which I had to relate in hurried fashion the exciting story of the annual general meeting of the Tata Steel Company. During these four days on the boat I have been, so to say, chewing my cud. Not for a long time have I had either the convenience or the leisure or opportunity to devote a full 96 hours to calm thinking and undisturbed discussion in one's own mind of vital topics. Amongst the many matters which I have been turning over in my mind and which in this process of scrutiny and analysis have become vastly clarified, the most important are the sundry issues brought to the forefront by Friday's heated debate in Bombay House. The most noteworthy point is that there is perfect agreement between Directors and shareholders that the new and rejuvenated administration in Jamshedpur has produced marvellous results and holds richer promise for the future. Even the most disgruntled shareholders paid fulsome tributes to the resplendent achievement of Mr. Ardeshir Dalal. Every time reference was made to Mr. Dalal, there was vociferous cheering from every part of the house. Not less generous was the tribute paid to General Manager Keenan. I was seated beside Mr. Keenan and, on occasions, he could hardly keep his eyes dry—he was so visibly moved by this universal and spontaneous appreciation from even hostile quarters that his face portrayed mixed feelings, pleasure and embarrassment. Three principal speakers on the Opposition, Messrs. Kapadaia, Davar and Shamdasani, were, each one of them, most eloquent in their expression of approbation of the Resident Director and General Manager. You may, therefore, say definitely the shareholders are pleased with the present working and management of the Company and that they feel quite bucked up about present results and quite confident about future prospects. There is no quarrel as between directors and shareholders on the most fundamental question of efficiency of the administration.

The difference has risen only as regards the policy pursued by the Directors in the matter of allocation of profits. This is, I suggest, a comparatively trivial matter, and it should be possible, by tact and accommodativeness on either side, to bring about perfect accord between the now warring sections. Forty-seven lakhs has been set apart for depreciation on collieries. Why forty-seven lakhs, ask Messrs. Kapadia and Company. Why not twelve lakhs for colliery depreciation and release thirty-five lakhs for further dividend on second preference shares? Those who know the history of these collieries will agree that forty-seven lakhs is by no means too drastic a provision. The collieries stood in the books at Rs. 2.15 crores. After taking into account this yeor's provision, the book value will be reduced to Rs. 1.68 crores. Let it not be forgotten that the collieries were bought at a time when coal was selling at Rs. 10 per ton. Coal is now going a-begging at Rs. 3 a ton. Prices of coal properties have gone to a fourth or fifth of the prices current a decade and a half age. The present book value of the Tata Steel Company's collieries in the light of these facts should be reduced to about Rs. 65 lakhs nett. There is thus a further one crore to be provided in future years. The sooner this is done the better, as the improving look of the Company's balance-sheet will be marred by collieries continuing in accounts at inflated figures. But is this to be achieved, while yet the equally disfiguring item of arrears of cumulative dividend on preference shares persists in the accounts? Which is the uglier of these two items, inflated value on collieries or persistent indebtedness to preference shareholders? The directors think that the first is an eyesore, while shareholders point to the second as the offending feature. Both directors and shareholders are agreed that collieries must be written down to a considerably lower value in due time and that arrears of dividend must be wiped off with the utmost expedition. The difference is about relative importance.

As between the two viewpoints disagreement has thus been further narrowed down. Cannot some way be found whereby viewpoints of both can receive proper emphasis and each can be fully satisfied? For answer I would suggest that both shareholders and directors should now carefully and earnestly study the possibilities of the scheme which I proposed last May for issuing ordinary shares in some specified proportion in lieu of accumulated dividend on second preference shares. During the extremely short stay I made in Bombay I had occasion to discuss this scheme both with the authorities of the company and the authorities of the Shareholders' Association. The latter the most keen about the early adoption of some such scheme; and all their grouse will vanish, if directors get a move on in this direction. The former are equally interested in the scheme but are worried about practical problems like such recalcitrant shareholders as would not agree to take ordinary shares in liquidation of their claim for dividend arrears. Stalwart believers in bonds may not fancy equity shares.

And what is to be done about such dissentients? I agree that the problem, as thus visualised by the directors, is there. But it should not be difficult to find a solution. I will, with some slight modification, summarise my scheme. Firstly, each ordinary share should be reduced from its face value of Rs. 75 to Rs. 50. Secondly, for every eight second preference shares two ordinary shares should be issued in lieu of arrears of dividend in the past 1926 scheme period. Thirdly, the scdeme of 1926 must operate as then provided. Fourthly, *ad interim* distribution of Rs. $3\frac{1}{2}$ should now be paid and must not be taken into account when dividend is declared on 1934-35 accounts.

By the reduction of the nominal value of ordinary shares as here proposed, the total value of existing ordinary shares will be Rs. $1\frac{3}{4}$ crores as against Rs. $2\frac{3}{8}$ crores. There will thus be a reduction of about Rs. 85 lakhs. At two ordinary shares for eight preference shares, the total value of the new shares thus issued will be just short of Rs. 88 lakhs. The authorised capital of the Company will thus remain unchanged. And this is important, as otherwise application to the High Court and prolonged proceedings will be entailed. Moreover, it will upset the plans and assumptions of the Tariff Board report about capitalisation, etc. The ordinary shareholders need not fight shy of the reduction in the nominal value, as what counts is the market value. And the market value will be enhanced by this very scheme, as it directly results in ordinary shares becoming eligible for dividend even as from the current year's working. I may, therefore, unhesitatingly say that from the point of view of the ordinary shareholders, they must welcome this scheme with both hands, so far as the octopus of preference dividend arrears is concerned ; and they can have no objection whatsoever to a formal reduction of nominal capital. holders they get a negotiable security against an accumulation of dividend on paper. If future results turn adverse by any chance, this claim will continue to be a paper asset. This chance to get a negotiable scrip is something tangible and something of value at this very moment, irrespective of the vagaries in the future. The current market value of ordinary shares is over *Rs. 80. That is, on eight preference Shares a holder will get two ordinary Shares, which he can dispose off for Rs. 160.* This works out to Rs. 20 per second Preference share.

I may be told at this stage that the prices of ordinary Shares might go down under such selling pressure as will be caused by Preference Shareholders disposing off their bonus ordinary shares. As against this depressing factor must be set the heartening prospect of immediate dividend-earning capacity, which ordinary Shareholders will acquire in the new arrangements. If the market values the ordinary Shares at *over Rs. 80,* while dividends are yet far off, what would it rate them at, if by next August or September these Shares are sure to come in for dividends? The ordinaries are likely to rule on the *right side of Rs. 100* rather than on the wrong side.

It may, therefore, be concluded that against the residue of arrears accumulating since 1926, my scheme will mean at least Rs. 20 per Share now and here. Add to this the Rs. $3\frac{3}{4}$ which, I suggest, should be given by way of allurement. What more can preference Shareholders want? I should rather think that they would be committing great folly, if they, too, do not welcome the scheme with both hands. There is another important consideration which should induce their acceptance. The market quotation of second preference shares last week-end was Rs. 169. Less last dividend, the price becomes Rs. 154. According to my scheme, the holder will get anything like Rs. 24. The share should thereafter stand at Rs. 130. This includes rights under the 1926 scheme, which are now nearly Rs. 35. This Rs. 35 keeps earning interest at 4 per cent. and must be liquidated over the next few years. In other words, second preference shares are likely to earn anything like 11 to 12 per cent. for the next ten years, after which, as and when the 1926 scheme commitments have been liquidated, interest will run on the stipulated basis of $7\frac{1}{2}$ per cent. A security, which will yield 11 to 12 per cent. for 10 years and guarantees $7\frac{1}{2}$ per cent. thereafter is what, in relation to current yields on sound fixed-interest-bearing securities, should be worth at least Rs. 170. In simple terms, the adoption of the scheme should push up the price of second preference shares to near Rs. 200. With the prospects so alluring and with present advantages so tangible and concrete and immediately realisable, the holders of second preference shares would be pursuing a most suicidal policy, if they do not concur with this scheme.

But as we know the world and as we have experienced human nature, suicide is not an un-

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, Oct. 24.

Nomads as we are, with a half-yearly trek up or down the hills, it still takes us some time after arrival at Delhi to be our usual selves again. And this year the confusion is increased ; for, everything in Delhi seems to be topsy-turvy. Even Time seems to have been enslaved in the present regime ; and as in politics, so on the dial, the clock has been put back. And considering these upsets the Editor must be glad to escape with but a day's delay in the despatch of this week's Olympus and the delay, too, is something to be thankful for, for I have waited to have a casual and wellnigh incredible rumour I heard yesterday confirmed before I start to write this. I refer, as my readers can guess, to the appointment of Sir Sikandar Hayat Khan as a Deputy Governor of the Reserve Bank of India. Not *the* Deputy ; for Mr. J. B. Taylor takes precedence over him.

* * *

Why has Sir Sikandar Hayat Khan, who is the Revenue Member of the Punjab Government, who has acted twice as the Governor of the Province and who can be expected to take a leading part in the administration of the Punjab when provincial autonomy is established, now accepted the position of a Deputy Governor which will tie him down for five years at least?

* * *

Could he have been keen on this job which, after all carries with it no more than four to five thousand rupees per mensem? And is not the glamour of being a Minister in his own province under provincial autonomy greater than that of a second Deputy Governor of even the Reserve Bank of India? Then, what could have been the motive? These questions are easily asked, but without any satisfactory explanation.

* * *

But there hangs a tale thereby. It is believed that Sir Fazli Hussain would like Sir Sikandar Hayat Khan to be out of his way, when he himself becomes the Chief Minister of the Punjab as he surely will be under provincial autonomy. Sir Sikandar Hayat and Sir Fazli Hussain have rarely pulled on well together. The progress of one has been the envy of the other.

* * *

Still both have prospered, with this advantage that Sir Fazli Hussain, being a master-mind and having been for nearly five years a member of the Viceroy's Executive Council, had the pull in influence. As for Sir Sikandar Hayat, he has also been lucky in that, with Sir Fazli away, the acting Governorship was unquestionably his, more than once.

* * *

Now, however, a different situation is in prospect. Sir Fazli Hussain will shortly retire from Delhi-Simla politics and betake himself to the more exhilarating, though somewhat narrow, sphere of his own province, where he is universally respected and admired for his ability and genius for work. He calculates that this is the psychological time for him to entrench himself in the Punjab. But how is this possible with Sir Sikandar Hayat Khan with the halo of two acting governorships in the field?

* * *

There, the problem has been solved. The Deputy Governorship of the Reserve Bank had to be made. One or two prominent Hindus, who were approached, put forward their own conditions. There is an unconfirmed story that they rejected the offer because it will only be the second Deputy Governorship and not the first, and so not a senior post with any immediate prospect of getting into the Governorship of the Bank.

* * *

Sir Sikandar Hayat, moreover, is not one who will disoblige anyone. He was recently in London and came under the influence of Whitehall. The offer, in fact, was made to him there. But he doubted and hesitated. He wanted time. When he came back he found that the Reforms prospects were not so bright as to enable him to be of any great service to the people of his own province. Moreover, Sir Fazli Hussain's decision not to take extension as member of the Viceroy's Executive Council, was working in his mind. He had to make a choice.

* * *

Now, pressure was being put on him from influential quarters. Sir Sikandar Hayat is so good that he will not say "No". And by slow degrees he said "Yes"! Hence the delay in the announcement. The choice of one who has very little knowledge or experience of banking may surprise many, but it must be remembered that the choice had to be made, from the Government point of view, from among the Muslims for more reasons than one. In the circumstances, it is not an unacceptable choice.

* * *

Sir Sikandar Hayat, being the Revenue Member of the Punjab, and facing the Legislative Council in session will formally take leave of the House before he decides on the date on which he will take the new appointment. That is the reason why the communique containing the official announcement of his appointment does not make any mention of the date. Moreover, Sir Osborne Smith and Mr. Taylor are returning to India in the first week of November, when there will be meetings in Bombay and decisions as to the arrangements for the setting up of the Bank will be taken.

* * *

Sir Alan Parsons, who has left India to join the India Office, was given a magnificent farewell at the New Delhi Aerodrome by a large number of his friends, particularly of the Finance Department. Among those present were Sir James and Lady Grigg, Sir Ernest Burdon, Mr. Metcalfe, Mr. Glancy, Mr. Tallents, Mr. C. K. Rhodes, Mr. Sanjiva Rao, Mr. S. P. Varma, Mr. Wingate and Mr. Bewoor. Sir Alan Parsons has been known in Simla and Delhi as an exceptional I.C.S. officer who was capable of taking very quick, and correct decisions, on matters relating to Indian Finance.

* * *

The Finance Department here is getting busy with the budget for 1935-36 which Sir James Grigg must present to a Swarajist Assembly. Mr. Sanjiva Rao, the Budget Officer, finds his hands strengthened by the re-importation of Mr. N. Sundaresan from the office of the Controller of Currency.

THE GATEWAY OF INDIA

(FROM OUR CORRESPONDENT)

Tuesday, October 23.

The all too brief respite from work is over and the poor fellow who plies his pen for a trade is back once more at his desk. The task of serving up a fresh menu every week from Bombay is by no means an easy task. Bombay is far less newsy, if I may draw from journalistic parlance, than Bengal. In the Gateway City there is either a riot or a complete lull and the unfortunate reporter has to fall back on the conclaves of city fathers or of legislators for matter to fill his allotted quota. In this respect Bengal is easily the foremost province. Age does not wither nor custom stale Bengal's infinite variety. Even Corporation meetings in Calcutta are made lively by catcalls, flying inkpots and battling Mayors.

Fortunately, since the last report, the news value of Bombay has greatly increased. Bombay is for the moment the hub of political India and the telegraph wires are flashing potential headlines to newspapers all over India from Bombay. Congress is not yet, or perhaps no longer, a power in the State. But for the few days that it holds its session the hopes and aspirations of the people are profoundly stirred and every politically conscious Indian scans the pages of the morning paper carefully to follow the fortunes of what he fondly imagines to be a real popular assembly. The popular eagerness may be gauged from the fact that as much as Rs. 5,000 has been paid for a seat in the Working Committee's pandal at Wardha. This is just like Bombay which is known to supply ballast, in the shape of funds, to the frail and scarcely sea-worthy Congress barque. But will a Gaffarnagar or a Tilaknagar be the same pulsating picture of India's political consciousness when Gandhiji retires?

One cannot descend to the ordinary things of the work-a-day world without a wrench. A further proof, if proof were needed, is provided to show that the seaborne trade of Bombay is on the decline. In a report on the Sea-borne trade of Bombay, excluding Sind, for the year ended March 31, 1934, the Collector of Customs records a decline of nearly 8 per cent. in the aggregate value of the foreign trade of Bombay. There was an improvement in the exports of Indian produce by about 18 per cent. comprising mainly of shipments of raw cotton. But imports shrank by 15 per cent. The United Kingdom enjoyed the largest share of the trade through Bombay, as a result, no doubt, of the Ottawa Agreement, her share being 25.67 per cent. of the total. Japan comes next with 20.71. Of the total imports through Bombay the United Kingdom's share was 31.06 per cent. owing mainly to larger shipments of sugar machinery, motor cars and electrical instruments and machinery. The share of the United Kingdom in the exports from Bombay rose to 17.23 per cent. and even though Japan continued to occupy the first place her share declined to 25.27 per cent. owing to smaller purchases of raw cotton. A satisfactory settlement of the problem of the growing importance of, and competition from, the Kathiawar ports will, no doubt, greatly improve the figures in the future.

Bombay has a legitimate grouse against the powers that be for not having her air claim recognised. Aerially speaking Bombay is not in the picture. To all who approach India by sea Bombay is the Gateway City and the magic haze that hangs over Bombay harbour at dawn as a P & O boat slowly casts anchor in the bay is said to initiate the foreign tourist into the mystery that is India. But by air, it is a totally different story. The great air routes that link up the most widely separated countries on the globe literally give Bombay a wide berth. The Great Air Derby just completed, in which records were lowered and which turned almost every eye skywards all over the world, took not the slightest notice of India's greatest port. Bombay was not even in the line of flight that a blundering machine might come down at Juhu for first aid or for re-fuelling. And yet Bombay is certainly growing more and more air-minded. The four adventurous pupils of the Bombay Flying Club who have just successfully completed an instructional flight—the first of its kind—of 13,000 miles from Bombay to London and back, should greatly enhance Bombay's claims as one of the chief centres of aviation in India. The whole trouble is that there is not a suitable aerodrome in Bombay. The one at Juhu is flooded in the monsoon months and there is no suitable site for building another. The Mayor of Bombay, speaking at the dinner in honour of the adventurous quartet, reiterated the plea for an aerodrome on the Back Bay Reclamation. The scheme bristles with difficulties, not the least of which is the enormous cost which it involves. But, surely, Bombay's millionaires will not allow a few lakhs to stand between Bombay and aerial glory.

This brings us to the other important matter that is engaging the attention of the city fathers in Bombay. For sometime the state of the Corporation finances has caused some anxiety and the Corporation appointed a Committee to suggest ways and means of balancing the next year's budget. Unfortunately, or perhaps fortunately, the Corporation has not the same freedom to raise revenue as the Government have. Their sources of revenue are definitely prescribed by legislation and any departure from these sources requires special legislative sanction. The sources, namely the general tax, the water tax, the halalkor tax, the fire tax, the town duties and raising of loans, have nearly all been tapped more or less completely. The general tax now stands at 12 per cent., which is already high, although well below the statutory maximum of 17 per cent. The high level of rents in Bombay and the continuous migration of town-dwellers to the suburbs should warn the Municipal executives that they cannot look for any help from this source.

The fire tax, the halalkor tax and the water tax should barely repay the utility services which the Corporation runs and cannot be utilised for the purpose of making a profit. There remain, therefore, the town duty and the capacity of raising a loan. The latter is a dangerous pastime and cannot be indulged in merrily in season and out of season. The burden of debt charges is already heavy and only the expansion of Corporation credit or the exigencies of an extra-ordinary expenditure can warrant the raising of fresh loans. The Corporation could, perhaps, put off the evil day by extending the currency of the short period loans and attempts are being made, it is understood, in this direction. But such palliatives will hardly suffice when the spectre of an enormous deficit is stalking in the offing. The bewildered city fathers have, therefore, turned, by a process of exhaustion, to the one source that remains —the town duty.

The abolition of the town duty on cotton deprived the Corporation of what looked like a fruitful source of revenue. But a town duty in an advanced and ambitious port town like Bombay is an anchronism about which there can be no two opinions. The Commissioners of the Port of Bombay in their annual report, noticed in these columns sometime ago, ascribed the falling glories of Bombay as a port largely to the obnoxious and unjustifiable town duty on cotton. Attempts are now being made to revive the duty in the case of certain other commodities such as grain.

It is greatly to be regretted that the Bombay Corporation cannot think of any other method of

PYKARA IN ITS FIRST YEAR

(FROM OUR CORRESPONDENT)

Madras, Oct. 25.

The report of the Electricity Department for 1933-34 enables a sober estimate of the working of the hydro-electric projects in Madras after the flight of fancy and imagination which people naturally indulged in after the inauguration of the Mettur project in its completed form. It should be a matter for great gratification for the Province as a whole that the actual experiences of 1933-34, as shown in the official report, tend only to confirm the glowing picture which was drawn up of the financial results of the project and the immense industrial potentialities which it has opened up for the people of this part of the country as a whole. The more important parts of the report fall into two divisions. The first refers to the actual working of the Pykara scheme in the first year of its operation and the expansion in the supply of electric power up to the end of the year under review. The other refers to the observations of Major Howard regarding the working of the Electricity Department, particularly, from the standpoint of its expansion and its success as a commercial enterprise.

As regards the first, it is encouraging that the actual consumption of electric power supplied through the Pykara project and the revenue derived thereby exceeded the estimates on which the project was originally based. The actual consumption of power in 1933-34 was 9,669,203 units ; and this compares with the estimate of 6,534,000 units. There is naturally a corresponding difference between the revenue of Rs. 1,35,000 actually realised and the original estimate of Rs. 76,000. These results may be attributed to the energy with which the Electrical Department met the competition from the suppliers of rival sources of power. In the areas, in which electric power was first made available, the oil companies anticipated the competition and quoted low prices. This danger was promptly met by the Electrical Department by a revision of rates for low tension power, and a reduction of the rates for tea estates.

The Government even went further and made a modest outlay on the development of the market for electrical power. They sanctioned what is called a Conversion Fund, from which loans were made available for industrial concerns to enable them to change over to the use of electric power. It is reported that the displaced oil engines have been utilised for the establishment of thermal stations for electrical and industrial developments in other centres, with the idea of ultimately connecting them with the major hydro-electric works. But for this fund, the report avers, there would have been considerable delay in the expansion of textile mills in the Coimbatore district. If the department were less modest they might almost have claimed that the establishment of these mills was actually due to the provision of cheap electric power. To quote the words of the report "the existence of this conversion fund coupled with the availability of cheap electric power has at least expedited, if not actually caused, the establishment of four textile mills in the Coimbatore district and three more will probably materialise for the same reason." If this is a sample of expansion of industrial activity which the hydro-electric project will bring about in the future, the prospects of this part of the country are, indeed, enviably rosy.

That the hydro-electric projects are doing for the amenities of domestic life at least as much as they are doing for industrial production is seen in the vast expansion of electric supply companies in towns and municipalities which have but little claim to being industrial centres. According to the report 45 towns have now been supplied electric power for domestic consumption. Of these the supply in 23 are owned by local bodies ; and in the rest the supply of power has been leased to limited business corporations. Major Howard believes that the increased interest taken in the electrification of towns is largely the result of the management of the municipal electrification schemes by the Government Department. If the function of a municipal or local body is to provide the amenities of civic life, then it would follow that with a large scale hydro-electric project actually in operation, the supply of power to the citizens from such a source is at once the right and the duty of such municipalities and local bodies. It is yet too early to say whether the management of electric supply will be better done by the municipality or by a Public Utility Company. Mere theorising on the basis of the experiences of other cities in other provinces and countries would hardly suffice to provide a practical answer to the question. But, generally speaking, it is the duty of the Government to see that Municipalities are afforded every encouragement and means of availing themselves of the institution of the hydro-electric project, to supply electric power for domestic consumption in the areas under their charge.

In view of the storms that swept over South India in recent times, one is naturally tempted to look into the report for any sign of a confession that the project had not been executed in accurate anticipation of the squalls and storms, to which it would be subjected not infrequently. Here, too, the generally heartening tone of the official report is well maintained. It is learned that there has been no significant disturbance to the normal working of the project. In spite of the severities of the weather which South India has known during recent times, the problems that resulted therefrom were singularly free of any complication. The Electrical Department proved itself more than equal to the task which such storms involved for them ; and the problems have been, we are assured, adequately solved. Progress in regard to the expansion of area in which power is being supplied is well-maintained. Many extensions have been made during the period of review and more and more are under project. The proposed extension to Cochin has not met with official acceptance ; for the Department thinks that the load prospects are not favourable.

By far the most interesting part of the administration of he hydro-electric projects is the possibility of changing certain areas from the Mettur to the Pykara project and *vice-versa*. At present Trichinopoly and Srirangam derive their power from Pykara. And one of the main consumers of power, it is expected, will be the South Indian Railway Company, which will utilise electricity in their works and factories in Golden Rock, the Lillooah of the South. Theni, Periyakulam and Bodinayakanur and many places in the Trichinopoly-Negapatam line will, as has been pointed out in these columns on previous occasions, be supplied from the Pykara scheme. If the report of the Mettur hydro-electric scheme is approved, it would supply electricity to places up to Vellore and then the Trichinopoly-Negapatam extension would be switched over from the Pykara to the Mettur project, and a certain amount of power will be released from the Pykara scheme for use in Madura.

For a project so encouraging in the first year of its working, it is essential that the principles of administration should be revised. Consciousness of success in the first year has emboldened Major Howard to make certain definite recommendations, which, one cannot be too sure, will find acceptance with the Government. To mention only the under-

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

THE CHANCELLOR'S SPEECH

When the Chancellor of the Exchequer speaks all England listens. The exalted position which he enjoys, the enormous responsibility which he shoulders as keeper of the public purse, the issues that hang on the success or failure of the fiscal policy which the Cabinet is enjoined by him to adopt, all lend a peculiar significance to all his orations. And it is more so when speculation is already rife regarding the nature and fortunes of the next Budget.

Mr. Chamberlain, in his speech at the annual dinner given by the Lord Mayor to the bankers and merchants of the City, was strangely reticent about the coming Budget. He neither raised the hopes of those who are waiting for a colossal surplus to provide further 'reliefs' for the tax-payer, nor did he strike an unduly pessimistic note to lend moral support to the cynical few who look upon even the most undeniable signs of recovery as due to the miscarriage of definitely disruptive forces. On the whole, the speech was a sober and unimpassioned survey of the national economy as it stood at present, tinged by the scarcely exuberant hope that the little that was achieved would last.

It is hardly to be wondered at that Mr. Chamberlain should have only praise for the conservative and ultra-cautious policy by which the National Government was fighting the depression. The policy may lack in dramatic sensationalism but, according to the Chancellor, it has 'delivered the goods.' He argues from the rise in the index figures for different industries, notably textiles, engineering and shipbuilding, iron and steel and non-ferrous metals, that the outlook is by no means as dark as before. It is true that unemployment figures are still unsatisfactory but Mr. Chamberlain meets this implied charge with the familiar plea of increased mechanisation in modern industrial methods.

That Mr. Chamberlain is not merely a dutiful and loyal upholder of the policy of his party but is fully alive to the implications of a complex economic situation was proved by his reference to the increasing difficulties in the sphere of international trade and to the growing weakness of sterling. By far the most important part of Mr. Chamberlain's speech is that which refers to the Government's policy in regard to the exchanges. In view of the recent rumours regarding stabilisation *pourparlers* between America and Britain, it is well that the Chancellor of the Exchequer has disowned all intentions of immediate stabilisation. Likewise he has given the lie to the other report that the British Control was endeavouring to bring about the old parity between dollar and sterling. The official policy was clearly stated to be one of ironing out excessive fluctuations, while being ready to explore through private talks the chances of an agreement with foreign countries. That all ideas of immediate stabilisation are foreign to the Government is best seen in the emphasis which Mr. Chamberlain laid on the consolidation of the sterling bloc and the establishment of control banks in the Empire countries.

The hearers of Mr. Chamberlain waited in vain for a hint as to the nature of the next Budget. But it did not come. And perhaps, after all, it is best that the hard-pressed Chancellor of the Exchequer should not be robbed of the all too rare pleasure of springing an agreeable surprise once a year. The indications of improvement in the industrial outlook are not so abundant that the country can afford to commence the jollifications nearly half a year in advance of the Budget.

The Next Budget.

But speculation as to the next budget goes on apace. The ordinary Revenue and Expenditure returns for the first six months of the current financial year are out and already wiseacres are busy forecasting the probable surplus that the year may yield.

Revenue in the half year amounted to £273,883,086 and expenditure to £328,526,930, the half-yearly deficit being £54,643,844. This is higher than the deficit at the corresponding period last year by £6,053,689, but since last year yielded a comfortable surplus of over £31,000,000 in spite of an ill-visaged half-way house, it is assumed that the current year will also end equally propitiously.

Indeed, there are several encouraging signs. Customs receipts are mounting up faster than budget expectations. Budget estimates provided for £4,470,000 more than in 1933-34 and already the corresponding increase is £3,992,000. Even that fortuitous item, estate duties, has not failed the Chancellor and there is a shortfall of only £4,090,000 under this head. There is yet a half-year left for patriotic millionaires to die better than they have lived and help to balance the national budget. Excise, however, has not ivled up to expectations, but surely the beer-loving Britisher will not allow any startling disappointment under this head. The six-penny 'relief' in the income-tax is making a perceptible impression on the revenue ; but the increase anticipated was a conservative £12,000,000 of which £7,500,000 has already been realised. It may be assumed, therefore, that the Budget is shaping, more or less, on the lines anticipated. And since, despite any optimism that improving trade may have engendered, the budget was drawn up on a strictly conservative scale, the margin of safety provided is ample and it is almost safe to conclude that the year will end with a comfortable surplus. But since any speck on the political sky may portend a storm and disaster and since the international horizon is by no means crystal clear it would be premature to forecast the results six months ahead.

Unemployment.

But signs are definitely improving all round. For the first time since May, unemployment shows a substantial decrease. The monthly return published by the Ministry of Labour should put heart into the administration who were growing uneasy at the spectacle of a slow, but steady, swelling of the ranks of the unemployed.

On September 24 last there were approximately 10,233,000 insured persons aged 16-64 in employment in Great Britain. This is 63,000 better than August and 352,000 better than a year before. The number of unemployed persons on the register on September 24 were 1,647,673 wholly unemployed, 352,696 temporarily stopped and 81,618 normally in casual employment, a total of 2,081,987. This is 54,591 less than the number on August 20 and 254,740 less than a year ago.

Changes in the state of unemployment in the different industrits are shown in the following table, the comparison being between the September return and the August return:

Coal mining	−48,648
Woollen and worsted ...	−13,543
Boots and shoes	−10,809
Cotton	−7,726
Pottery	−6,425
Iron and steel	−3,067
Hosiery	−2,920
Distributive trade	+12,319
Hotel, etc.	+10,007
Building	+8,464
Public works	+2,151
Shipping	+1,448

There is perhaps a special reason for all the outstanding improvements. Thus the acceleration of the work in the mines following the settlement of the South Wales dispute probably accounts for the greatly improved figures for coal mining. But the well-distributed nature of the improvement goes to prove that the growing purchasing power of the average Britisher must have given a fiillip to trade generally. Even the de-

Air Mail Week

cline in building and public works contracting is not as steep as one would expect at this time of the year. If the present tendency holds, there are definite grounds for hope for a real and lasting recovery.

The Coal Dispute.

Fortunately for England, the settlement, at the eleventh hour, of the Coal Dispute averted a serious setback in the progress of recovery. The harm that has resulted is already considerable for the fear among customers of an interruption of supplies has caused a diversion of orders from the district and has enabled foreign competitors to make serious in-roads into the already attenuated trade. But the psychological effect of a settlement without recourse to more disruptive tactics should be great and it should be a feather in the cap of the administration that it can successfully intervene in a serious trade dispute fraught with disastrous possibilities. Mr. Ernest Brown, the Secretary for Mines, deserves the congratulations of the whole country for the capable way he has handled a situation which was quickly getting out of hand.

The successful conclusion of the coal dispute improves the prospects of the negotiations now proceeding in London and shortly to be carried on at Warsaw for a trade agreement between England and Poland. Polish competition has been the largest thorn in the side of Britain's coal industry and the protracted wrangling between owners and miners, now happily concluded, tended to strengthen the hands of the competitor. The efforts of British delegates to wrest substantial concession from Poland in return for the large share of foreign markets which Polish coal enjoys are believed to have a fair chance of succeeding. The balance of trade has for some time past been heavily in favour of Poland, to the extent, in fact, of about £4,000,000 a year. An attempt is being made by increasing the import of herrings and motor cars into Poland to bring about a more equitable adjustment of the balance. Separate negotiations for an understanding in regard to the competition of British and Polish coal in overseas markets will take place in Warsaw. All this is to the good and England has an undoubted reputation for driving a hard bargain. But will Poland relent?

U. S. A.

NEW DRIVE IN THE NEW DEAL

The Recovery Administration is fast settling to its new collar. The retirement of General Johnson therefrom and the ascendency of Mr. Donald Richburg have not occasioned any brtak in the policy of its pursuit though from the manner in which General Johnson left the picture one would have thought otherwise. A weekly appraisement of economic developments of America is not an easy task. For never has any one government attempted so much at the same time. When a number of at once formidable and intricate problems are attacked and tackled at the same time a uniform progress all along the line is well nigh impossible. An improvement in one direction is often countered by a set-back in another. But in the case of the Recovery Administration in America there have been weeks in which the Administration's schemes suffered a setback and weeks in which the majority registered an advance. The last fortnight, one is happy to find, may be classed under the latter category. Not that there are no black spots, but what matters in America of to-day is the general feeling that is left in the public mind, whether it is one of confidence or apprehension that the complications are increasing and must lead to an utter betrayal, however far away in the future it may be. The latter feeling does get a hold on the public mind sometimes.

President wins new convert.

During the period under review it is the former that is ruling strong. Apart from certain improvements in the situation, this feeling might be attributed to the continued presence of the President at the capital. For public opinion is formed not so much on an appraisement of the essential advantages and difficulties of the Administration but rather on the threats which are hurled from time to time by powerful interests. Now it is Wall Street. At another time it might be the bankers. At the beginning it might be the courts, or big business or the Federal Reserve Banks. A public that is by no means confident of an early accomplishment of the Herculean tasks which President Roosevelt has so cheerfully taken on himself is naturally unnerved by every sign of defiance shown by men who count. When President Roosevelt is at the capital he has a way of disarming unfriendly critics. And one of his remarkable triumphs occurred this week, when he won Mr. Hearst of the powerful Hearst Press to his side. After an interview with the President Mr. Hearst has declared that it is businessmen who had retarded the recovery by skulking back from the President's plan, and that hearafter business must do its part in bringing about the success of the President's efforts. He has also pointed out that if recovery should be delayed by the recalcitrance of businessmen, the Government would be obliged to resort to inflationary measures, that is, the persistence of businessmen in their former attitude would mean that they would be bringing unto themselves the very danger which they try to avoid. It is not clear what following Mr. Hearst has among the businessmen. But it is in the power of the press to create opinion. Mr. Hearst's conversion to the New Deal should prove of great moment to its fortunes in the future. It is also learned during the week that the President is evolving a scheme by which he would do to the bankers what he has done to Mr. Hearst. But not even the vaguest idea of what the scheme would look like is yet available. It is said that the whole scheme will be announced in the President's speech to the Institute of Bankers on October 15.

Price Rising and Stabilisation.

While thus the President is broadening the basis of support for the success of the Recovery Campaign, Mr. Donald Richburg and Miss Perkins are busy discussing the revision of the principal measures constituting the Recovery programme. Lately, the President himself has met the N. R. A. Committee and discussed the outstanding questions. The principal measures under consideration are firstly, further inflation with a view to raising the general level of prices. Secondly, an alteration in working hours with a view to expansion of employment and the reduction of the outlay on direct relief. Regarding the former the President himself discussed on October 10 the question of price level stabilisation with the press correspondents when they paid their weekly visit to his house. The President is positive that no attempt could be made to stabilise the price level until the commodity prices had risen further than they had already done.

Re-financing not a failure.

In view of the feeling which had gained currency in and about the time of the refinancing programme of the Treasury that the President was inclined to give up the idea of further inflation and was even prepared to countenance the talk of deflation, it is necessary to examine the statement of the President to the Press correspondents a little more closely. Mr. Roosevelt leaves no room for doubt that he is satisfied with the progress which has been made in the past eighteen months. Equally, he assured the country that he had no hide-bound ideas of what should be done to make further progress along the line. The Press correspondents tried to draw him out on the question of further

Air Mail Week.

reduction in the gold content of the dollar. With characteristic modesty, Mr. Roosevelt disclaimed all competence to give a definite opinion on the matter. He was not unduly anxious to dispel the apprehensions that the opponents of inflation might have in this regard. To understand this statement completely it is necessary to add that previous reports about the results of the Government's refinancing programme were unduly pessimistic. The Treasury Department announced on October 7 that 915 millions of dollars out of the 1,215 millions of the Liberty Loans had been converted to lower interest securities. It is understood that in another two days the Treasury hopes to be able to bring about the conversion of the remaining 300 millions. After that the holders will be able to obtain payments in cash out of the treasury cash balance of 2,184 millions. The savings as a result of the conditions already effected amount to 15 million dollars per year. With so much of the work of conversion actually accomplished it would not be true hereafter to suggest that the Administration would be swayed in its monetary policy by considerations for the refinancing programme.

More Cut in Working Hours ?

As for the second question of alteration in working hours, Mr. Donald Richburg seems to be quite in favou, of reducing them and expanding employment. He has, it might be noted, shown the same spirit of militant intolerance of criticism as General Johnson in a speech at a Rotary Club. Mr. Richburg declared that the American Government has not effected more regulation of business in its entire Recovery Programme than the big business corporations. The suggestion probably is that a Government which attempts so much as the American Administration is now doing has ample justification for interfering much more in business than it has already done. So that, there is still more interference in store for American business. The Administration is by no means scared of public expenditure. It is in no mood to make a fetish of balancing the budget. But it is always touchy about outlay in direct relief to the unemployed. It is therefore understandable that it should seek to earmark the same amount for other purposes which would have the effect of expanding employment. Mr. Richburg probably is in favour of effecting another cut in working hours. Miss Perkins who approaches this problem from the standpoint of labour has been working hard at a comprehensive design and unified insurance programme for the protection of the individual from all the hazards of modern life, unemployment, exceeding ill health, old age and premature death. She declared in a speech at San Francisco that such a scheme will be enacted during the next session of the Congress based on the report of the Committee of Economic Security to be issued at the beginning of December.

Silver Purchase and Chinese Protest.

While, thus, there is a more hopeful outlook in general in the Recovery Administration there is one embarrassing factor which should not be overlooked or underrated. In pursuit of the silver policy the Administration have now met with an unexpected obstacle in the shape of the note of protest from China. Though China has long been regarded as the principal beneficiary of every improvement in the price of silver she has now awakened to the danger which the high price of the white metal has for her foreign trade and her standard of living. It should not be difficult to understand that a higher price for silver will cause not only an appreciation of the value of the Chinese Currency but also a depletion of the silver stocks, and a consequent deflation. America should find it hard to define a policy which while effecting an inflation and a depreciation of the exchange at home causes quite the opposite in China. The Treasury's view is that the Silver policy has been designed to offset the excess of exports over imports which America is now experiencing. In other words, by purchasing silver from abroad America is creating the means of payment for her creditors. While this sounds very obliging, China's objections are unaffected by this explanation. That the Treasury and the Department of State which have to deal with China's Protest do not underrate the difficulties of finding a suitable reply is seen in the extraordinary long time which they are taking over the task. Mr. Cordell Hull is reputed to be entrusted with this task. Meanwhile, it is of interest to note that the Treasury figures published during the week-end and quoted by Reuter reveal an increase of $134,000,000 in circulation for the two months since the inauguration of the new silver policy. Outstanding Federal Reserve Bank notes have increased to $77,351,000. The difference represents the probable total of the new silver certificates reaching the public.

YUGOSLAVIA

DEATH OF KING ALEXANDER

The Marseilles outrage has caused a profound shock throughout the Continent. Removing as it has done two of the foremost statesmen who have occupied key positions on the Continent, the shock has been all the more severe. People in almost every country were reminded of similar tragic events two decades ago, which set the whole world aflame. Everywhere people wait in breathless suspense to see if the bullets discharged by the Croatian fanatic should help to ignite the explosive material that Europe only too fully abounds in at present. For, despite the efforts of the League of Nations and the Disarmament Conferences, the world to-day is no nearer to peace than it was twenty years ago. The tragic experience of the last war and the consequences, political and economic, of that world conflagration have not served to make politicians wiser. The war mentality is still as real as it was in 1914 and the major powers on the Continent have kept the war bogey always alive. The sudden accession of strength to Germany and the dashing manner in which the old institutions have been discarded before the rising tide of nationalism, have never been taken as the natural outcome of a state of despair and despondency into which Germany had sunk soon after the war. The alliance between Poland and Germany has been interpreted by foreign powers as inimical to the cause of peace. Italy has only too often been reminded by her Dictator of the necessity of being prepared for war "not of tomorrow, but of to-day." The entry of the Soviet into the League Assembly has been suspected as having been engineered by France, to strengthen her hands against the potentialities for evil of the Polish-German non-Agrarian Pact. The proposals of the Eastern Locarno are only strategical movements of the pawn on the political chess-board.

Living as the world does, thus, on the edge of a volcano, this fear of an eruption is understandable. Some months back when Dr. Dollfuss was bled to death, the world was precisely in the same state of excitement as it is now. And from the strategic point of view Yugoslavia is not in any way less important than Austria. While the maintenance of the independence of Austria may be a matter of vital importance to the powers for the preservation of peace on the Continent, it cannot be forgotten that Yugoslavia was essentially a strategic creation, effected partly at the expense of Italy which waited in vain at Versailles for the fulfilment of the promises made to her on her entry into the war in regard to Dalmatia and the Adriatic generally. The French had been a

Air Mail Week

powerful influence in pre-war Serbia, in accordance with the pan-slav policy of the Franco-Russian alliance, whereas the British interest has been concentrated in Croatia and was centred at Zagreb. The stability of this new State is as essential as that of Austria, and when it threatened to give way under the weight of minority problems, it was giving considerable anxiety to Italy.

The international consequences of the death of the Yugoslavian Royal Dictator cannot, therefore, fail to be noticed. King Alexander's motive in visiting France was to investigate the possibilities of Yugoslavia's participation in the markedly improved Franco-Italian relations. The French Foreign Minister was to haye formulated some sort of general policy towards the status of Austria, during his visit to Rome about the end of this month. This general policy which was calculated to be acceptable to both Italy and Yugolavia was regarded as conducive to a *rapproachment* between Italy and Yugoslavia. The death of both of these statesmen at a critical stage, leaves one in doubt as to how far the negotiations will succeed. Will it be hampered, now the chief sponsor and conciliator is no more? Will M. Barthou's successor pick up the threads from where they were left, and follow them to a successful end?

It is perhaps difficult to say. The Duce's speech at Milan, last week, was of course intended as an overture to the late King Alexander. He is also reported to have said in the course of the speech that "precise de facto conditions exist" for an Italo-Yugoslav understanding. Considering how scrupulously he has avoided any reference to the relations between France and Yugoslavia, on former occasions, it may be taken that there has been a distinct change of attitude. But it should be remembered that there has been a campaign in the Yugoslavian Press to prove that the Croatian terrorists who were responsible for the death of the King have been receiving assistance from Italy. The heavy reinforcement of the Italian garrison at Zena, an Adriatic Port, has also not helped towards promoting cordial relations between the two countries. It also appears that the Croatian fanatic was in the list of names handed to the League of Nations by the Yugoslavian Government of terrorists seeking refuge in Austria. It is also reported that on personal examination of the assassin, it transpired that such terrorists received "not only toleration but even collaboration" from the Hungarian Government. There have also been severe allegations against the inadequacy of the police arrangements in Marseilles on the day of King Alexander's arrival. There have, of course, been denials both from the Italian and the Hungarian Governments of any complicity either avowed or open in the tragic assassinations. Though for the immediate future such mutual recriminations may impede the progress of negotiations for cordial understanding, owing to the nearness of the outrage, it is to be hoped that in the long run, the good work begun by M. Barthou would not be allowed to fade away.

More than the international consequences, the internal repercussions in the State are causing some concern to diplomats. Yugoslavia is the kingdom of the Serbs, Croats and Slovenes, created out of the old kingdoms of Serbia and Montenegro and the neighbouring parts of the Austro-Hungarian Empire inhabited by people of Slavonic race and speech. Even before the new kngdom was established, the struggle had begun between the old Serbs who wished to make it simply old Serbia writ large and to govern the new province by a centralised system under exclusive Serb dominance, and the National Committees and Assemblies of the emancipated Austro-Hungarian provinces. Post-war Yugoslavia is essentially a heterogeneous group of territories. The Serbs form hardly more than a third of the population, there are about three million Croats, one million Slovenes, as also many Magyars, many Albanians and some Roumanian speaking population. The more advanced peoples of the new northern provinces keenly resent a form of established government, which in effect amounts to Serbian dominance. This question of centralisation versus some degree of local autonomy has dominated Yugoslav politics ever since the creation of the enlarged kingdom.

After trying Parliamentary institutions for sometime, the King found that they were incapable of overcoming the tribal antipathies and of evolving a new nation. The previous parliamentary institution meant in effect a Serbian hegemony, maintained by military force and it was creating a deadly feud between Serbs and Croats. Being, therefore, convinced that a dictatorship alone was suited to the State, he effected a royal coup d'etat in 1929 by suspending the constitution and dissolving the Parliament.

The new regime did much in a short time to increase administrative efficiency and deal with financial problems. Heavy cuts were made in the Civil Services, a start was made with the reduction of the seven legal codes to a uniform system and a special court was set up to deal with offences against the Defence of the Realm Act. Corruption was rife among officials and strong measures were taken against it including suppression of certain public bodies. With a forcefulness characteristic of a dictator, all the Croat and Slovene parties were dissolved; a censorship was established and papers suppressed and punished for free criticism while drastc penalties were imposed for political agitation.

The discordant element was thus kept well under check and though there was a certain amount of resentment towards this highhanded policy especially among the Croats, it cannot be doubted that the State had benefitted by the dictatorship. Now that the strong ruling hand has been removed the discordant elements may once again gain the upper hand. A Regency of three has been set up including two Croats. Naturally the policy of the Regency should therefore be conciliatory towards the Croats. If the Serbian corps of officials are strong enough, they may effect a military coup and endeavour to establish the Serbain he Gemony. If the Croats are, however, too strong for the Serbs, their attention might be diverted by deliberately launching some foreign military operations. In any case it is probable that unless moderation prevails, the danger of a civil war between the various factors is not very remote. Will the Regency rise to the occasion to keep the affairs from developing to such a pitch?

balancing their budget but must needs jeopardise the reputation and prospects of Bombay as a port. A town duty on any commodity or commodities is, perhaps, the worst stigma that can attach to a port. It is almost a warning to the merchants to go to some other port. Never like this will Bombay regain her one-time glory as a seaport. It is a pity that the immediate necessity of balancing the budget should so cloud the vision of the City Fathers that they should contemplate taking a step which cannot but be greatly detrimental to the prosperity of Bombay in the long run. Surely, the possibility of retrenchment and curtailment of expenditure has not been completely exhausted. The scale of expenditure on the amenities of town life, for instance, can well afford to bear the axe.

SOUTH INDIA

(*Continued from page 1003*)

lying principle of Major Howard's recommendations, Major Howard believes that in hydro-electric projects the Government have really embarked on a vast commercial enterprise, the success or failure of which is a matter of the greatest concern to the Government. Apart from the question of bringing about an expansion of industrial activity, the failure of the project would be a serious loss to the tax-payer ; and even the Government, considered apart from the people, would find it difficult to run their day-to-day administration. The Government, therefore, should, in the opinion of Major Howard, be prepared to regard the hydro-electric project as a commercial enterprise and provide the requisites necessary for its success as such. This means that the administration of the Electricity Department should be free from those obsessions of financial and administrative control, which, perhaps, are appropriate to ordinary Government Departments, but are quite inimical to efficiency in the working of a commercial enterprise.

THE GREAT DEPRESSION

(*Continued from page 995*)

knowledge to any definite use. The value of Professor Robbins's thesis as a scientific study would have been considerably enhanced, if he had resisted the temptation to prescribe remedies for the depression. For if it is true that a mere return to the past is not possible, any prescription of remedy presupposes the desirability of creating a certain set of conditions. As such it involves a subjective valuation which, Professor Robbins is the foremost to declare, it is not the function of an economist to determine. It might he said that the Professor does not select any particular set of values when he advocates a return to *laissez-faire.* But this would be only to indulge in casuistry ; for it is well-known that *laissez-faire* involves a considerable degree of unconcern for certain aspirations of the working classes in all countries and the backward nations. The stability which Professor Robbins seeks to attain, he defines as "a structure of industry which can change without recurrent catastrophe." Professor Robbins forgets that those, who are trying new experiments in economic policy, are aiming at something more than freedom from *recurrent catastrophe.* His criticism of most of the economic policies of the present day is vitiated by lack of reference to the objectives of such policies. On the other hand, Professor Robbins assumes that, in all these cases, the aim is the expansion of business on the old lines. No one will think of questioning the correctness of Professor Robbins's view that the exceptional severity and prolongation of the present depression were due to the increasing rigidity of the economic structure.

* * *

But one would expect that a writer like Professor Robbins, with such a training in scientific thought, to examine the objectives which the world, placed as it is after the dislocation caused by the depression, could consider and choose from. If he had devoted a chapter or two to this question, he would have given due importance to the human costs involved in seeking recovery through deflation and to the aspirations of backward nations to secure a balance in their national economies other than the mere equilibrium of foreign payments. Whether or not these objectives show a better sense of values or the methods now pursued are calculated to secure such objectives, it is certain that no criticism of such methods can be sound which tacitly ignores the growing change in the ends of economic policy.

BOOKING OFFICE FOR AIR TRANSPORT

One of the reasons for the strangeness of aerial transport is that one sees so little of it in one's daily rounds in the city. The Indian National Airways Ltd., who who represent Indian Trans-Continental Airways Ltd., have made a welcome change in opening an attractive office at 16, Government Place East, for the purpose of passenger bookings on the three airways in question, and a passengers' waiting room. The latter will be used by Indian National Airways' Dacca service passengers for whom the Company are henceforward providing transport from the City Office out to Dum Dum at a very nominal charge of Rs. 2 per head. This is an entirely new departure and is probably the first Airways' Booking office in India of its kind, from which passengers will be able to procure information and secure their requirements by way of air transport to all principal points of the Empire.

This new office is excellently situated for both residential, trade and commercial interests and the public will, doubtless, utilize it freely for enquiries in connection with air transport and air mail arrivals.

CLIVE STREET GOSSIP

(*Continued from page 998*)

common occurrence and is a factor which we should take into account. In other words, we have to be prepared for the contingency of a few—may be a very small minority—shareholders standing out as dissentients. What should the Company do against such a contingency? It seems to me that the solution is simple. Firstly, the Company should undertake that in the case of second preference shareholders, who are not prepared to accept ordinary shares, they will be paid off the actual amount of arrears of dividend outstanding on the day this scheme is adopted. Secondly, the Company should at the same time arrange for an underwriting arrangement, whereby all ordinary shares not taken up by the preference shareholders will be subscribed and paid for by the underwriter at a specified price. I have some experience of underwriting. In my days my firm has disposed of one crore worth of shares in less than six hours. Were I in business, I would not hesitate to put my signature to the required underwriting agreement in connection with this scheme. The Shareholders' Association is not a cantankerous body. It has proved itself capable of constructive criticism, so much so that the sternest critics of the Imperial Bank administration in 1931 were the recipients of generous compliments from the Chairman at the next annual meeting. Mr. Davar and his friends will wholeheartedly canvass support for the scheme outlined by me. Its adoption will mean that the foes of 1934 will be the cordial friends of 1935. And why should shareholders nurse imaginary grievances when the tale told by the balance-sheet is so cheery?

"EAVESDROPPER."

JUTE AND JUTE GOODS

JUTE

Calcutta, Oct. 25.

Opening after the holidays, the jute market has ruled quiet but steady. December futures are quoted at Rs. 27-8 while there are buyers for ready Firsts at Rs. 25-8, sellers quoting four annas more. The arrivals of jute this season have been unusually heavy and therefore the holders of loose jute are always keen on business. Mills are buying at every decline, but in view of heavy selling pressure, they are not willing to increase their buying limit. During the holidays there was fairly good business in the London market and a major part of October requirements have been bought near about £15. There is a distinct tendency of resistance at declines, but only poor support is forthcoming to maintain the top levels.

JUTE MANUFACTURES

Calcutta, Oct. 25.

Very steady conditions prevailed in the hessians market towards the close of the week. The quotations for nine porter ready were Rs. 8-13 and for eleven porters Rs. 11-3. There has been a heavy covering business for near positions. Mills have, however, sold at Rs. 8-8 for January/June next year and are inclined to sell at a further rise. The covering business is mostly over and long bulls have been able to unload a good part of their holdings.

Heavy goods market was rather easy, the strength that was noticeable was only in sympathy with the hessians. Business was done in B. Twills at Rs. 24-10 and plain Cees at Rs. 25-6. Liverpools for October were done at Rs. 27-12.

COTTON AND COTTON GOODS

COTTON

Calcutta, Oct. 25.

There has not been much change in the Cotton Market during the period under review. Broach April/May has ruled within a range of 2/3 rupees taking Rs. 210/- as the mean price. There has been a paucity of contracts and consequently a tighter tone is prevalent. But both the trade and speculation are not lending support in face of prospects of larger 1935 crop anticipation from South States. The undertone is, however, fully steady and purchases at declines will prove advantageous for short profits.

According to the All-India second cotton forecast for 1934-35 the total area under Cotton is estimated at 20,365,000 acres or about 3 per cent. more than the revised final figures of last year. Taking into consideration the arrivals in port towns it appears that the final estimate may reveal a higher figure than the present one.

Messrs. James F. Hutton & Co., Manchester, in their weekly cotton market report dated October 10 say :—

The Bureau report issued this week indicated returns of 9,443,000 bales for production against 9,252,000 bales last month, whilst the condition was given at 55.9 per cent. compared with 53.8. The amount ginned to date stands at 4,958,000 bales as compared with 3,131,000 bales last month. The position is practically as anticipated and although a slight drop in values was expected by many traders it was realized at the same time that latterly the level of prices had been discounted to a large extent. It is possible that trade may expand when prices have adjusted themselves completely to the new details of the supply position, but dealings this week have not suggested that any great volume of business is likely to develop. Now that the crop estimate figures have been published it is hoped that those overseas buyers who have been withholding their commitments will cover whilst the market is steady. Indications of potential demand from India have been especially disappointing. A few orders have been placed for dhooties and mulls from Calcutta, also the more expensive fancy cloths. Light whites and shirtings have been in demand for Karachi but the business has been only small. Bombay and the larger up-country markets have been quiet and only a trifling turnover has resulted in dyed goods and prints. Both voiles and fancies have been in request for Rangoon and offers for fancies for Hong Kong have been more widely distributed, while both grey and white shirtings have received some attention for the Straits Settlements.

A spell of prosperity is passing over the piecegoods section in Bombay. A huge drop of unsold stocks to the almost record figures of 60,000 bales in the Bombay mills is reported and their order books are carrying 1⅝ lakh bales.

Indian mills are capturing the lion's share of the Japanese piecegoods business, which has been restricted to an annual import of 400 million yards or about 8 per cent. of India's total requirements.

Karachi's foreign trade in September showed an increase under cotton manufactures of Rs. 13,64,583 compared with the corresponding period last year. The total imports of piecegoods during six months ended September 1934 amounted to 106¼ million yards valued at Rs. 1.91 crores, showing an increase of 25 per cent. in quantity and 37 per cent. in value compared with last year, the United Kingdom's share being 87 million yards valued at Rs. 1.58 crores, an increase of 36 per cent. in quantity and 41 per cent. in value, while that of Japan was 17¼ million yards valued at Rs. 27 lakhs, a decrease of 12 per cent. in quantity and an increase of 2 per cent. in value.

COTTON FORECAST

The following is the second cotton forecast, 1934-35, published by the Director-General of Commercial Intelligence and Statistics, Government of India :—

	Thousand Acres.

BULLION

GOLD

Calcutta, Oct. 25.

Following the change in the London-New York cross rate there were day to day changes in gold prices. London gold came down to £7-1-0 as against £7-3-3 per ounce before the holidays. Local prices have for that reason fallen from Rs. 35-10 per tola to Rs. 35 per tola. Soverign is likewise uoted at Rs. 22 as against Rs. 22-6 a week ago. Stocks in Bombay are heavy and demand for internal consumption is poor. The tendency of the market is easy.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £191,909,743 on the 3rd instant as compared with £191,886,073 on the previous Wednesday.

During the week the Bank announced the purchase of £28,803 in bar gold.

With a further appreciation of the gold currencies in terms of sterling, the price of gold continued to advance and new high records have been established during the week under review, the highest being 142s. 9d. the quotation of yesterday.

In the open market moderate amounts were available and the demand was keen, general buying maintaining prices at a considerable premium over the gold exchange parities.

SILVER.

There have been wild fluctuations in the silver market during the fortnight. The highest and lowest quotations were Rs. 68-14 and Rs. 64-12. The quotations at the time of writing are Rs. 65-2. The rise was due to heavy bear covering in the London market following the announcement of raising the export duty on silver in China. London prices rose to 24⅛d. and local to Rs. 68. There was heavy liquidation in the Indian markets at the rise, consequently the drop in the latter has been more steep as compared with the former. London quotations are now at 23⅞. There is little change in the New York market. The quotations are more or less unchanged at 53 cents.

There is not much of an internal demand. Stocks are heavy and offtake poor. At rise domestic silver comes into the market for sale and it being cheaper than the standard quality, is preferred for internal use.

London—Air Mail Week.

The market has been very active during the past week, and prices advanced rapidly.

There was a rise of ¼d. on the 8th instant followed by a further rise of ⅜d. which carried quotations to 23½d. for cash and 23⅝d. for two months delivery; prices again advanced, cash being quoted at 23⅝d. and two months at 23 7/16d., the highest since September, 1929.

America has been a buyer, but the strength was caused largely by demand from the Indian Bazaars. The weakness of sterling has again been a factor, besides which the market found that sellers were inclined to hold back.

There has been buying on China account, as well as sales from the same quarter; speculators have given good support, but there was some profit-taking at the advance in prices.

The following were the United Kingdom imports and exports of silver registered from midday on the 1st instant to midday on the 8th instant:—

SUGAR

The minimum price of sugar in Bihar and Orissa until December 15 is notified in a *Gazette Extraordinary* as 5 annas per standard maund of 82 2/7 pounds avoirdupois for use in a factory worked by the vacuum pan process and 3 annas per standard maund for use in a factory worked by the open pan process.

On and after November 1, Advisory Committees will be appointed in "controlled areas" in Bihar and Orissa who will regulate the purchase of sugarcane intended for a factory.

The Bourbong All-India Swadeshi Sangh has protested to the Indian Sugar Mills Association, Calcutta, against the contemplated appointment by the Sugar Marketing Board of a foreign firm as selling agents.

TEA

Calcutta, Oct. 25.

In view of the enormous potentialities of tea consumption in Russia (see Indian Finance of October 13) considerable interest attaches to a statement by Dr. Harold Mann at a meeting of the Planters group of the Royal Empire Society. Dr. Mann, who is well-known in India, said that tea cultivation was introduced in 1892 in Western Georgia. The crop did not reach 3,00 acres until 1926, but since then it has grown to 30,000 acres. Some of this tea, according to Dr. Mann, will bear comparison with the best Darjeeling. Owing to climatic conditions the yield will always be small compared with the outturn of India and Ceylon; but the aim of the Soviet Government is to produce enough to meet the home demand. Georgia does not produce the dark heavy liquoring teas of India. Dr. Mann thinks it impossible that Georgian production will lead to any great reduction of imports into Russia for the next few years.

DUTCH TEA CONTROL

As from October 1 the restriction percentage for the licences on account of the purchases of native Dutch-Indian tea by the tea factories has provisionally been fixed at 37 per cent. as against 34 per cent. since April, 1934. It is further announced that the number of tea factories buying up native tea is 161. These factories have a standard production for 1934-35 of 59,754,000 lb. of tea, while purchases of native tea amount to 34,197,000 lb.

The following are the particulars of Sale No. 19.

STATISTICAL INFORMATION

TRADE OF CALCUTTA

SEPTEMBER FIGURES

The overseas import trade of Calcutta in private merchandise in September 1934 showed an improvement over that of the previous month, the value rising from Rs. 2.78 crores to Rs. 2.93 crores against Rs. 2.25 crores in September 1933, states a note issued by the Collector of Customs.

Exports also slightly advanced from Rs. 5.40 crores to Rs. 5.43 crores against Rs. 5.68 crores in September 1933.

Imports

A comparison of the values of the principal imports with the figures for September 1933 is given below, the figures in brackets representing the increase or decrease as the case may be:—

	In lakhs of rupees.
Cotton goods	59 (+33)
Machinery and millwork	33 (−11)
Iron and steel	15 (+2)
Wool	17 (+7)
Drugs and medicines	5 (−1)
Hardware	9 (+3)
Electrical instruments	9 (+1)
Liquors	4 (+1)
Chemical and chemical preparations (excluding chemical manures and medicines)	6 (−1)
Oils, mineral	9 (−7)
Betelnuts	5 (no change)
Provisions and Oilman stores ...	6 (+1)
Paper and pasteboard	6 (+1)
Motor cars	4 (+1)

The total yardage of cotton piecegoods increased from 11 millions to 29 millions and the value advanced from Rs. 16 lakhs to Rs. 48 lakhs.

There was no importation of wheat from abroad.

Exports

The variations in the values of the principal exports as compared with the trade of September 1933 are indicated below:—

	In lakhs of rupees.
Jute manufacturers	190 (−25)
Tea	169 (+8)
Jute, raw	69 (no change)
Oil seeds (non-essential) ...	21 (−7)
Hides and skins	12 (−9)
Lac	15 (+6)
Pig iron	9 (+2)
Grain, pulse and flour	12 (+2)
Manganese ore	3 (+1)

DIRECTION OF EXPORTS

Tea and Raw jute were shipped mainly to the United Kingdom; pig iron to Japan; linseed and gunny bags to the Commonwealth of Australia; skins, lac, manganese ore and gunny cloth to the United States of America; hides to Germany, and rice to Mauritius.

INDIA'S TRADE

A memorandum issued by the Department of Commercial Intelligence and Statistics on India's Foreign sea-borne Trade in September 1934, says that the total imports of private merchandise in the month under review amounted to Rs. 1,054 lakhs, and total exports, including re-exports, to Rs. 1,207 lakhs. Net exports of private treasure during the month of report were Rs. 96 lakhs and total visible balance of trade in merchandise and treasure was Rs. 254 lakhs in favour of India. Balance of remittances of funds was *minus* Rs. 511 lakhs.

INDIAN CUSTOMS REVENUE

According to returns received in the Department of Commercial Intelligence and Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revenue) collected during the month of September 1934 amounted to Rs. 461 lakhs as against Rs. 429 lakhs in the preceding month and Rs. 380 lakhs in September 1933. The total revenue realised in the six months ended September 1934 was Rs. 2,487 lakhs, as compared with Rs. 2,364 lakhs during the same period last year.

KOLAR GOLD OUTPUT

Robertsonpet (Kolar), Oct. 20.

The following are details of the 17 bars of gold bullion despatched to the Bombay Mint, being the output of mines named below for the first half of October:—

Mysore mine 3,878.70 ounces valued at about Rs. 3,68,887.

Champion reef 3,150.70 ounces valued at about Rs. 2,95,382.

Oorganum 2,077.97 ounces valued at about Rs. 1,97,834.

Total 14,392.21 ounces valued at approximately Rs. 13,69,247.

TRADE OF KARACHI

SEPTEMBER FIGURES

The statistics of the foreign trade of the port of Karachi for September, issued by the Collector of Customs, show that the total value of imports (merchandise) amounted to Rs. 1.44 crores, an increase of Rs. 27 lakhs, and that of exports to Rs. 70 lakhs, an increase of Rs. 10 lakhs, as compared with the figures for September, 1933.

The progressive totals for the six months ended September, 1934, show an increase of Rs. 1.14 crores or 18 per cent. under imports, and of Rs. 1.97 crores or 34 per cent. under exports.

Comparative figures of the principal imports and exports for September, 1933 and 1934, are given below:—

IMPORTS

Cotton manufacturers ...	33,84,493	+13,64,583
Oils	12,39,800	+5,84,484
Woolleen goods ...	22,71,045	+5,47,276
Metals and ores ...	10,40,955	+2,08,863
Vehicles	4,28,333	+1,93,557
Liquors	3,60,769	+1,64,345
Cotton, twist and yarn ...	19,331	+13,102
Machinery and mill-work ...	8,50,679	−9,22,469
Sugar	3,91,953	−1,08,081

The increase under cotton manufactures occurred in receipts of white and coloured goods. Imports of white goods amounted to 8¼ million yards valued at Rs. 13 lakhs as against 5¾ million yards valued at Rs. 9 lakhs, while those of coloured goods totalled 7½ million yards valued at Rs. 17 lakhs as against 3 million yards valued at Rs. 7 lakhs in September, 1933. Imports of grey goods declined from 1,438,000 yards to 1,434,000 yards in quantity, but increased from Rs. 1.86 lakhs to Rs. 2 lakhs in value.

IMPORTS INCREASE

The total imports of cotton piecegoods during the six months ended September, 1934, amounted to 106¼ million yards valued at Rs. 1.91 crores, showing an increase of 25 per cent. in quantity and 37 per cent. in value as compared with the corresponding period last year.

The share of the United Kingdom in the total imports of cotton piecegoods during the six months ended September, 1934, was 87 million yards valued at Rs. 1.58 crores, an increase of 34 per cent. in quantity and 41 per cent. in value, while that of Japan was 17¼ million yards valued at Rs. 27 lakhs, a decrease of 12 per cent. in quantity, but an increase of 2 per cent. in value as compared with the first six months of 1933-34.

The increase under woollen goods was most noticeable in receipts of yarn and knitting wool from Japan, while that under oils occurred in receipts of kerosene oils from Russia.

The improvement in imports of metals was the result of larger arrivals of copper sheets and iron or steel rails, chairs and fishplates from the United Kingdom. The decline in imports of machinery occurred mainly in receipts of sugar machinery from the United Kingdom and Belgium.

The decrease in imports of sugar occurred in receipts of beet sugar from the United Kingdom, Java, on the other hand, sent more, *viz.*, 4,647 tons as against 3,503 tons in September, 1933. The total quantity of sugar imported during the half year ended September, 1934, was 28,782 tons as against 31,646 tons in the corresponding period of 1933-34.

EXPORTS

Cotton, raw	36,53,159	+12,58,062
Barley	1,59,886	+1,59,528
Wheat	1,46,075	+1,37,900
Wool, raw (Indian and Foreign)	8,53,590	+13,622
Skins, raw	1,57,759	−2,01,745
Rapessed	3,65,210	−74,336
Hides, raw	20,040	−36,637
Wheat flour	51,175	−11,409

The increase under cotton occurred mainly in shipments to Italy, Japan and France. The total quantity of cotton exported during the six months ended September, 1934, was 126,553 tons (708,696 bales) as against 73,779 tons (413,163 bales) in the corresponding period last year. Of the total quantity (*viez.*, 1,564 tons) of wheat exported during the month under report, 1,391 tons were shipped to the United Kingdom and the remainder went to the Persian Gulf ports and Ceylon.

Almost the entire quantity of barley exported during the month was purchased by the United Kingdom.

The decrease in exports of raw skins was due to reduced purchases of goat skins by the United States of America, while the falling off in exports of rapeseed occurred in shipments to the Netherlands and Germany.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday Morning.

The Stock Exchange opened fairly steady on Wednesday morning after the Puja Holidays although there was no large accumulation of business. Government Securities ruled steady while Jute Mills share remained firm in sympathy with better commodity market. The improvement in cotton secti on has been maintained. Although there was no further development in the Coal Restriction Scheme, coal shares continued very steady owing to the rumour that the Restriction Scheme was an accomplished fact.

Among Miscellaneous Industrials, the usual general business was reported, Electrical, Engineering and Paper Mills' shares being in favour while Sugar Mills were rather subdued. Teas were quiet in sympathy with unsatisfactory sales in London and locally.

Government Securities :—Giltedge section opened steady after the holidays and a fair business was put through in long dated terminables. 3½ per cent. Government Paper changed hands round about Rs. 91-10. 3½ per cent. Loan 1947-50 at Rs. 101-3 and 4 per cent. Loan 1960-70 at Rs. 107-6. Short and Medium dated loans were slightly easier owing to the absence of business. Advices from London indicate a firm tone in India Government's Sterling Securities. The tone at the time of writing was rather dull with 3½ per cent. paper quoting Rs. 91-8.

Fixed Interest Bearing Securities :—The usual demand for Jute Mills Preferences, especially, which were undervalued on the 5 per cent. yield basis, were in fair demand at improving rates. Among other Preference shares, Elgin Mills changed hands upto Rs. 140; Kesorams at Rs. 135; New Victorias at Rs. 5-4. Bengal Telephone Preferences recorded a few deals round about Rs. 15 and Burn and Co. 7 per cent. Preferences were marked at Rs. 132-8. Associated Hotel Preferences were dealt in at Rs. 101 ex-dividend and Spencer & Co. 'B' Preference at Rs. 12-4.

Only a limited business was reported in Debentures. 5 per cent. 1958-88 Calcutta Port Trust changed hands at Rs. 113-8 while among Industrial issues, 5 per cent. 1916-45 India General Navigation recorded a deal at Rs. 105 and 5 per cent. 1928-39 U. P. Electrics at Rs. 102-4.

Other Investment Stocks :—Owing to the rumour of its amalgamation with an Exchange Bank, Imperial Bank's shares met with a strong and persistent demand and the rate at the time of writing is standing at Rs. 1,620 for the Fully Paid up issues and Rs. 410 for the Contributories which is however somewhat below the best. Central Bank's shares are now quoted at Rs. 33-6.

A fair turnover resulted in Light Railways shares. Arrah-Sasaram changed hands at Rs. 58-8, Baraset-Basirhat at Rs. 58; Buktiarpur-Bihar at Rs. 62 and Shahdera (Delhi) Saharanpore at Rs. 136. Among Government guaranteed issues only Bankura-Damodar River Railway recorded a deal at Rs. 85.

Cottons :—The improvement manifested in this section recently has been fully maintained and to-day's quotations for shares reveal some substantial improvement over those ruling a few weeks back. Bengal Nagpur Ordinary are not available below Rs. 21; Dunbar Ordinary were marked up further to Rs. 147. A large line of Kesoram Ordinary changed hands round about Rs. 4-10; Cawnpore Textiles remained very steady at Rs. 4-1; Muir Mills Ordinary at Rs. 340; New Ring Ordinary at Rs. 97 and New Victoria at Rs. 1-13.

Coals :—Coal shares opened with a cheerful tone on the rumour that the Restriction Scheme was an accomplished fact and that an announcement to that effect is imminent although it transpired that the Managing Agents have failed to reach an agreement regarding tenders for Railway coal.

The feature is, however, the strong enquiry for Equitable and the prices moved upto Rs. 28-2 at the time of writing. Bengal also improved to Rs. 263-8; Amalgamated to Rs. 22-8. Bokaro and Ramghur remained steady at 9-4; Burrakur (ordy.) at Rs. 14-12; New Beerbhum (ordy.) were marked upto Rs. 15-2; Sendra to Rs. 13-8 and Union to Rs. 14-8.

Among low priced stocks. Burradhemo met with a good enquiry round about Rs. 5-4, Mundulpore recorded a few deals round about Rs. 4-14. Searsole at Rs. 2-9 and Talcher at Rs. 2-5.

Jutes :—Commodity markets ruled firm. 9 Porter Hessians at the time of writing are quoted at Rs. 8-13 and Jute at Rs. 27-8. Howrahs opened steady at Rs. 54-14 on Wednesday and fluctuated within narrow limits. On Thursday the market opened firm in sympathy with better Hessians and steady jute prices and on the rumour of a better dividend for Howrahs for the half year ended 31st September, 1934, Howrahs opened at Rs. 559 and a large business was reported round about that figure, but when the actual dividends of Howrahs and Reliances were known, which were no better than that of the previous half year, —*i.e.*, Rs. 1-12 for Howrahs and Rs. 2-8 for Reliances,— sellers came out and Howrahs were marked down to Rs. 55-4 at the time of writing. Kamarhattys improved to Rs. 545 during the early part of the sessions but eased off later to Rs. 541.

Among other Rupees 10 priced stocks, Clives drooped back from Rs. 32-10 to Rs. 31-14 on rumour of reduced dividend. Hukumchands remained steady at Rs. 14-14, Nationals at Rs. 24-12 and Reliances at Rs. 76. Presidencies were marked at Rs. 5-8.

Among higher priced denominations, Anglo-India and Gourepores kept very steady at Rs. 424 and Rs. 612 respectively. A fair enquiry was in evidence for Ballys and a good turnover resulted round about Rs. 194 on the publication of its satisfactory report for the half-year ended 30th September, 1934. India and Nuddea also kept very steady the former quoting at Rs. 338 and the latter at Rs. 47. The report of Kharda for the half year ended 30th September, 1934 was also well received by the market.

Electricals :—A fairly large business was reported in Electric Power Supply Companies shares at steady rates. Benares Electrics are now quoted at Rs. 14-2 ex-dividend. Bareilly Electric at Rs. 13-10 ex-dividend. Agra changed hands at Rs. 125 while U. P. Electrics recovered to Rs. 159. Muzafforpores were dealt in at Rs. 8-14 and Jubbulpore at Rs. 13-4. Cuttack Electrics recorded a deal at Rs. 6; Upper Ganges were marked at Rs. 12-12 and Upper Jumna at Rs. 11-4.

There is room for further Capital appreciated in the last named as a dividend is expected very shortly.

Engineering :—Engineering Companies' shares kept fairly steady. Bengal Iron recorded a few deals round about Rs. 4 and Indian Iron and Steel were marked at Rs. 7-2. Indian Standard Wagon (ordy.) changed hands at Rs. 53-8, Indian Galvanizing at Rs. 9-8 and Saran Engineering at Rs. 9-4; Britannia Building and Iron were marked at Rs. 4-14. Burn & Co. (Ordy.) may be placed at Rs. 265.

Sugars :—Sugar shares were rather subdued and an all-round easier tone prevailed. Balarampur are now on offer at Rs. 19-12, Cawnpore (ordy.) at Rs. 36-6 and Samastipore at Rs. 12-10. Champuran changed hands at Rs. 24-4, New Savan at Rs. 14-3 and Carew & Co. at Rs. 21-4. Murree Brewery were marked at Rs. 204-8; Punjab Sugars recorded a deal at Rs. 235; Raza at Rs. 128 and Ryam at Rs. 38-12.

Miscellaneous :—The usual buying investment account continued and a fair business was put through. Burma Corporation came in for deal and changed hands at Rs. 8-12. Bararee Coke kept steady at Rs. 12-3, Calcutta Tramways (ordy.) at Rs. 19-14 and Indian Wood Products at Rs. 36-12. Paper shares were in particular demand. Bengal Paper (ordy.) were marked at Rs. 118 and Titaghur Paper at Rs. 21-12. Midnapore Zemindary (ordy.) were also marked up further to Rs. 75.

Among Shipping companies, India General Navigation and Railway (ordy.) changed hands at Rs. 108 and Calcutta Landing and Shipping at Rs. 12-4.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday Morning.

The Stock Exchange opened fairly steady on Wednesday morning after the Puja Holidays although there was no large accumulation of business. Government Securities ruled steady while Jute Mills share remained firm in sympathy with better commodity market. The improvement in cotton secti on has been maintained. Although there was no further development in the Coal Restriction Scheme, coal shares continued very steady owing to the rumour that the Restriction Scheme was an accomplished fact.

Among Miscellaneous Industrials, the usual general business was reported, Electrical, Engineering and Paper Mills' shares being in favour while Sugar Mills were rather subdued. Teas were quiet in sympathy with unsatisfactory sales in London and locally.

Government Securities :—Giltedge section opened steady after the holidays and a fair business was put through in long dated terminables. 3½ per cent. Government Paper changed hands round about Rs. 91-10. 3½ per cent. Loan 1947-50 at Rs. 101-3 and 4 per cent. Loan 1960-70 at Rs. 107-6. Short and Medium dated loans were slightly easier owing to the absence of business. Advices from London indicate a firm tone in India Government's Sterling Securities. The tone at the time of writing was rather dull with 3½ per cent. paper quoting Rs. 91-8.

Fixed Interest Bearing Securities :—The usual demand for Jute Mills Preferences, especially, which were undervalued on the 5 per cent. yield basis, were in fair demand at improving rates. Among other Preference shares, Elgin Mills changed hands upto Rs. 140; Kesorams at Rs. 135; New Victorias at Rs. 5-4. Bengal Telephone Preferences recorded a few deals round about Rs. 15 and Burn and Co. 7 per cent. Preferences were marked at Rs. 132-8. Associated Hotel Preferences were dealt in at Rs. 101 ex-dividend and Spencer & Co. 'B' Preference at Rs. 12-4.

Only a limited business was reported in Debentures. 5 per cent. 1958-88 Calcutta Port Trust changed hands at Rs. 113-8 while among Industrial issues, 5 per cent. 1916-45 India General Navigation recorded a deal at Rs. 105 and 5 per cent. 1928-39 U. P. Electrics at Rs. 102-4.

Other Investment Stocks :—Owing to the rumour of its amalgamation with an Exchange Bank, Imperial Bank's shares met with a strong and persistent demand and the rate at the time of writing is standing at Rs. 1,620 for the Fully Paid up issues and Rs. 410 for the Contributories which is however somewhat below the best. Central Bank's shares are now quoted at Rs. 33-6.

A fair turnover resulted in Light Railways shares. Arrah-Sasaram changed hands at Rs. 58-8, Baraset-Basirhat at Rs. 58; Buktiarpur-Bihar at Rs. 62 and Shahdera (Delhi) Saharanpore at Rs. 136. Among Government guaranteed issues only Bankura-Damodar River Railway recorded a deal at Rs. 85.

Cottons :—The improvement manifested in this section recently has been fully maintained and to-day's quotations for shares reveal some substantial improvement over those ruling a few weeks back. Bengal Nagpur Ordinary are not available below Rs. 21; Dunbar Ordinary were marked up further to Rs. 147. A large line of Kesoram Ordinary changed hands round about Rs. 4-10; Cawnpore Textiles remained very steady at Rs. 4-1; Muir Mills Ordinary at Rs. 340; New Ring Ordinary at Rs. 97 and New Victoria at Rs. 1-13.

Coals :—Coal shares opened with a cheerful tone on the rumour that the Restriction Scheme was an accomplished fact and that an announcement to that effect is imminent although it transpired that the Managing Agents have failed to reach an agreement regarding tenders for Railway coal.

The feature is, however, the strong enquiry for Equitable and the prices moved upto Rs. 28-2 at the time of writing. Bengal also improved to Rs. 263-8; Amalgamated to Rs. 22-8. Bokaro and Ramghur remained steady at 9-4; Burrakur (ordy.) at Rs. 14-12; New Beerbhum (ordy.) were marked upto Rs. 15-2; Sendra to Rs. 13-8 and Union to Rs. 14-8.

Among low priced stocks. Burradhemo met with a good enquiry round about Rs. 5-4, Mundulpore recorded a few deals round about Rs. 4-14. Searsole at Rs. 2-9 and Talcher at Rs. 2-5.

Jutes :—Commodity markets ruled firm. 9 Porter Hessians at the time of writing are quoted at Rs. 8-13 and Jute at Rs. 27-8. Howrahs opened steady at Rs. 54-14 on Wednesday and fluctuated within narrow limits. On Thursday the market opened firm in sympathy with better Hessians and steady jute prices and on the rumour of a better dividend for Howrahs for the half year ended 31st September, 1934, Howrahs opened at Rs. 559 and a large business was reported round about that figure, but when the actual dividends of Howrahs and Reliances were known, which were no better than that of the previous half year, —*i.e.*, Rs. 1-12 for Howrahs and Rs. 2-8 for Reliances,— sellers came out and Howrahs were marked down to Rs. 55-4 at the time of writing. Kamarhattys improved to Rs. 545 during the early part of the sessions but eased off later to Rs. 541.

Among other Rupees 10 priced stocks, Clives drooped back from Rs. 32-10 to Rs. 31-14 on rumour of reduced dividend. Hukumchands remained steady at Rs. 14-14, Nationals at Rs. 24-12 and Reliances at Rs. 76. Presidencies were marked at Rs. 5-8.

Among higher priced denominations, Anglo-India and Gourepores kept very steady at Rs. 424 and Rs. 612 respectively. A fair enquiry was in evidence for Ballys and a good turnover resulted round about Rs. 194 on the publication of its satisfactory report for the half-year ended 30th September, 1934. India and Nuddea also kept very steady the former quoting at Rs. 338 and the latter at Rs. 47. The report of Kharda for the half year ended 30th September, 1934 was also well received by the market.

Electricals :—A fairly large business was reported in Electric Power Supply Companies shares at steady rates. Benares Electrics are now quoted at Rs. 14-2 ex-dividend. Bareilly Electric at Rs. 13-10 ex-dividend. Agra changed hands at Rs. 125 while U. P. Electrics recovered to Rs. 159. Muzafforpores were dealt in at Rs. 8-14 and Jubbulpore at Rs. 13-4. Cuttack Electrics recorded a deal at Rs. 6; Upper Ganges were marked at Rs. 12-12 and Upper Jumna at Rs. 11-4.

There is room for further Capital appreciated in the last named as a dividend is expected very shortly.

Engineering :—Engineering Companies' shares kept fairly steady. Bengal Iron recorded a few deals round about Rs. 4 and Indian Iron and Steel were marked at Rs. 7-2. Indian Standard Wagon (ordy.) changed hands at Rs. 53-8, Indian Galvanizing at Rs. 9-8 and Saran Engineering at Rs. 9-4; Britannia Building and Iron were marked at Rs. 4-14. Burn & Co. (Ordy.) may be placed at Rs. 265.

Sugars :—Sugar shares were rather subdued and an all-round easier tone prevailed. Balarampur are now on offer at Rs. 19-12, Cawnpore (ordy.) at Rs. 36-6 and Samastipore at Rs. 12-10. Champuran changed hands at Rs. 24-4, New Savan at Rs. 14-8 and Carew & Co. at Rs. 21-4. Murree Brewery were marked at Rs. 204-8; Punjab Sugars recorded a deal at Rs. 235; Raza at Rs. 128 and Ryam at Rs. 38-12.

Miscellaneous :—The usual buying investment account continued and a fair business was put through. Burma Corporation came in for deal and changed hands at Rs. 8-12. Bararee Coke kept steady at Rs. 12-3, Calcutta Tramways (ordy.) at Rs. 19-14 and Indian Wood Products at Rs. 36-12. Paper shares were in particular demand. Bengal Paper (ordy.) were marked at Rs. 118 and Titaghur Paper at Rs. 21-12. Midnapore Zemindary (ordy.) were also marked up further to Rs. 75.

Among Shipping companies, India General Navigation and Railway (ordy.) changed hands at Rs. 108 and Calcutta Landing and Shipping at Rs. 12-4.

Among Oil shares, British Ceylon Corporation recorded a deal at Rs. 10-14 ex-dividend and Howrah Oils improved to Rs. 10-4.

Teas :—Dull conditions have again obtained in this section owing to lack of support and only a limited trade was reported without any fresh feature. Prices realised in the sales in London and locally were again unsatisfactory.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Thursday Evening.

Money Market.—Money was comparatively easy, but usable at 1½ per cent.

Exchange.—The market was steady with Banks selling T. T. at 1s. 6 3/64d. upto January 1935; 1s. 6 1/32d. January/February; 1s. 6 1/64d. March/April; 1s. 6d. May/June. Banks were buying 3 months' bills at 1s. 6 5/32d. for October/December.

Securities Market.—The market, during the week under review, ruled steady with minor fluctuations, and closed slightly easier. 3½ per cent. Govt. Paper is now quoted at Rs. 91-7-3; 1941 at Rs. 99-3; 1947/50 at Rs. 101-3; 1948 at Rs. 105-2; 1960/70 at Rs. 107-5; 1955/60 at Rs. 112-12; 1935 at Rs. 102; 1939/44 at Rs. 107-13; 1940/43 at Rs. 108-13; 1938/40 at Rs. 108-13; 1945/55 at Rs. 117-4; Bombay Development at Rs. 104-1; 6½ per cent. 1935 Bonds at Rs. 102-14.

Shares.—The market throughout the week under review has been affected by diametrically opponent views. Bears feel that financing for trade would result in tight money conditions involving a further fall in share prices, whereas Bulls are optimistic in expectation of improved trade conditions.

Textiles.—Textile shares followed the general trend of the market with ups and downs, now and then, but generally ruled at lower levels than last week. *Since most of the mills are working double shift, we feel, mill shares on further reaction are a desirable purchase.* Bombay Dyeings closed lower at Rs. 898-12; Central Indias after touching Rs. 330 ex-dividend, close at Rs. 316-4; Centuries eased down to Rs. 308-12; Kohinoors at Rs. 211-4; Colaba closed at Rs. 180; Gokaks at Rs. 172-8; Indian Bleaching Rs. 156-4; Indore Malwa Uniteds at Rs. 108-12; Lakshmi at Rs. 873-12; Morarjis at Rs. 1,550; New Great at Rs. 220-10; Sholapurs at Rs. 2,950; Simplex at Rs. 106-4; Vishnus at Rs. 1,587-8.

Hydro Electrics.—This group was steady, though quotations were lower than last week. Andhras closed at Rs. 1,556-4; Hydros at Rs. 156-4; Powers at Rs. 1,360.

Iron & Steel.—Not much business was done in this section. Ordinaries closed at Rs. 96; Deferreds at Rs. 408-2 and 2nd Pref. at Rs. 155.

Cements.—Cements were practically neglected this week. Quotations are: Bundi Rs. 32-14; Gwalior Rs. 95; Indian Rs. 442-8; Katni Defd. Rs. 1,185; Katni Ordinary Rs. 333-12; Okha Rs. 181-14; Punjab Rs. 23-4; Shahabad Rs. 348-12; United Rs. 69.

Miscellaneous.—On heavy liquidation by a bull, Belapurs which were around Rs. 240 were done as low as Rs. 227-8 at close. British Burma Petrols also on heavy selling closed at Rs. 4-13. Contructions were neglected with few buyers and closed at Rs. 79. Trams were lower at Rs. 155; Bombay Burmas steady at Rs. 450 for old scrips and Rs. 140 for New shares.

Banks.—Bank shares have been steady with minor fluctuations. Imperial Bank Fully paids and Partly paids closed at Rs. 1,625 and Rs. 410 respectively. Barodas steady at Rs. 102-8; Centrals at Rs. 33-2; Bank of Indias at Rs. 119; Unions at Rs. 5-1-6.

Insurance.—New Indias were steady at Rs. 34-12 ex-dividend; Oriental Assurance at Rs. 3,900; Vulcan at Rs. 8-6.

MADRAS STOCK EXCHANGE.

(*By Wire*)

(From Our Correspondent)

October 26.

Securities Market :—The Securities market was dull with business on the small scale. Paper improved sharply on short covering for the settlement. 3½ per cent. Government paper, after touching Rs. 91-10, reacted to Rs. 91-3. Business in 4 per cent. 1960-70 Loan was small, closing at Rs. 107-6. No interest was displayed in other loans, with several sellers in the Medium dated loans at well below quoted levels. Amongst short dated Bonds, Treasuries were taken up at Rs. 103. With selling pressure noticeable, a further fall in short and medium dated loans is anticipated in view of the increasing returns obtainable on Treasury Bills. The interest in speculative securities has been lost owing to the diversion of attention of the operators to Shares and Bullion.

Mysore State loans continued firm; the new 3½ per cent. Mysore Loan was dealt in upto Rs. 102-8. A purchase of the 4 per cent. Mysore is now cheaper. It is quoted at Rs. 107-14, at which rate several deals were reported. During the week, there was practically no alteration in rates of other Mysore Loans whilst Cochin State Loan has come on offer at Rs. 111.

The Demand for other Trustee Securities has been negligible.

Amongst Joint Stock Company Debentures, Cochin Malabars were wanted at Rs. 104-8 whilst Nilgiri Neerugundi Debentures were absorbed at Rs. 101 with buyers over. Vellamalai Tea Debentures also changed hands at Rupee One premium. The Preference share market was active. Spencer & Co. "B" Preferences were done at Rs. 12 whilst "A" Preferences were wanted at 8 annas premium. Vasanta Mill Preferences were placed at Rs. 102-8 and Premier Hosiery Works Preferences at Rs. 10-10. The demand for Tata Iron and Steel 2nd Preferences slackened and at the close there were sellers at Rs. 155.

Banks :—Banks were erratic. Imperial Bank fully paids were differently quoted on all the markets with business done locally at Rs. 1,612-8 for the Fully paids and Rs. 410 for the Contributories. Bombay has been the main buyer with Madras and Calcutta both sellers. Bank of India, temporarily moved down to Rs. 115, but on strong support forthcoming, closed higher at Rs. 119. Bank of Mysore shares improved to Rs. 242 whilst Indian Banks had strong buyers around Rs. 120.

Public Utilities :—Demand for Electrics and Telephones continued unabated. Madras Telephones had unsatisfied buyers at Rs. 19-12 whilst Rangoon Telephones improved to Rs. 13-12. Rangoon Electrics changed hands at Rs. 26 and Vellore Electrics at Rs. 13. Tata Power Ordinary shares were erratic, touching at one time to Rs. 1,325, closing better at Rs. 1,350.

Textiles :—Mills were firm. Buckingham and Carnatic Ordinary improved to Rs. 216, whilst Bangalore Mills were wanted at Rs. 126½; Cambodias had buyers at Rs. 10¾, whilst Premier Hosiery Ordinary shares were done at par. Gokaks were a dull market, but Sitarams put on 2 points and were done at Rs. 64-4.

Cements :—Cement shares were inactive and quiet in sympathy with other industrial shares in the Bombay market. Very little business passed in this section.

Sugars :—Sugars were buoyant. Deccan sugars were taken up at Rs. 277-8 with buyers now in the market upto Rs. 290. India Sugars improved further to Rs. 12; Mysore Sugars were a sticky market at Rs. 20. Amongst outside market shares, Belapurs had a sharp fall.

Planting :—The planting section was dull and no transaction of note took place.

Miscellaneous :—In this section, Tata Iron and Steel Ordinary and Deferreds still hold the forefront. There has been a sharp decline in the price of both the Ordinaries and Deferreds, which appear cheap for a look up.

NEW YORK STOCK EXCHANGE

New York, Wednesday.

Though the market ruled easy and dull through the weak, closed strong with rally led by Rail roads on Supreme Court of Columbia District deciding that Rail Roads Pension Act lately enacted by Congress is unconstitutional. United States Steel Corporation are now working 22 per cent.

LONDON STOCK EXCHANGE

The fortnight under review has very few features of outstanding interest. However, gilt-edge was firm throughout and on Thursday last continued firm with several advances in Indian Loans and Home Funds and War Loan maintained its record price of 106. Among other sections Tea and Rubber showed a declining tendency. Home Rails were dull and quoted lower. Oil shares were very fluctuating and declining and improving in prices. Tobaccos during the early part of the period declined but improved later. Industrials were dull and irregular.

THE CHAMPDANY JUTE CO., LD.

NOTICE IS HEREBY GIVEN THAT THE TWENTY-THIRD ORDINARY GENERAL MEETING OF THE CHAMPDANY JUTE COMPANY, LIMITED, will be held at the Registered Office of the Company, 1, Clive Street, Calcutta, on Saturday, the 3rd day of November, 1934, at 11 a.m. to receive the Directors' Report and Accounts for the half-year ended 30th September, 1934, and to transact any other competent business of the Company.

The Share Register of the Company will be closed from 27th October to 3rd November, 1934, both days inclusive.

By Order of the Board,
JAMES FINLAY & CO., LTD.,
Managing Agents.

1, CLIVE STREET,
Calcutta, 26th October, 1934.

WORLD OF INDIAN FINANCE

November 2.

The second week after the Pujas, far from seeing any improvement, has actually had a setback in general business conditions. Hardly any section reports a marked activity. Money is practically unlendable and, bankers too, like traders, are said to flirt with restriction and try the possibility of pegging money rates. Exchange is as ever stagnant with little business either way. The share markets are no better, despite the spate of activity witnessed in the weeks before the Pujas. Bombay reports a virtual end of the boom in cotton shares. The fears of overproduction have gained in strength and our Bombay correspondent this week gives greater weight than he did last week to this factor. Government securities at all centres have been stagnant, and what strength there is is to be attributed to the advices from London ; and the local market's turnover is inconsiderable. The stock exchange in Calcutta is no better, except in the jute section where the strong undertone is able to resist the infection of the surrounding gloom.

The persistence of easy conditions a fortnight after the Pujas gives rise to serious misgivings about the coming busy season. So far as money conditions are concerned, it is quite understandable that easy money should continue during this week also, for the ease in money conditions has been caused in large part by the payments of the Treasury last week on account of the excess of maturing bills over sales and also by the payments on account of the sterling purchases. In this week, however, the sudden spurt in the sales of intermediate Treasury Bills has made a great deal of difference. It is obvious, if sales of intermediates had continued at the level of the holiday period, the reduction in the total of Treasury Bills' outstandings would have gone to swell the surplus funds in the market and accentuate the ease. But this was not to be expected ; for, some of the surplus amounts must seek an outlet into Treasury Bills, especially as some of the usual investors in the Government's floating debt would have to reinvest what they get by way of maturities in new bills.

This tendency was accentuated by the increase in Treasury Bills rates which has been taking place during the last few weeks. It is, indeed, a great anomaly that the yield on Treasury Bills should be going up what time the market is experiencing increasingly easy money conditions. The change in Treasury Bills discounts may be gauged from the fact that, as against Rs. 1-5-10 per cent. at the end of September, the average rate of accepted tenders on the last auction day was to Rs. 1-7-10 per cent. The market could hardly have resisted the temptation of taking advantage of the increase in the rates and apply for such a large amount of intermediates as Rs. 1,74 lakhs between October 25 and 29. From the fact that the usual offtake of Rs. 1½ crores could be had, even at the open tenders, only at the average rate of Rs. 1-7-10 per cent., one may deduce that the market was certain that these rates would be acceptable to the Government. So far as we can see, there is no reason why the Government should show this undue anxiety to swop monies at these rates. The position of the Government's cash balances hardly shows any need for increasing the rates on Treasury Bills. According to the statements of the Imperial Bank of India, Public Deposits have increased during the last three weeks, which the statements cover, from Rs. 7.33 crores to Rs. 7.86 crores and thence to as high a level as Rs. 9.31 crores. When it is remembered that the normal level of cash balances, which the Government should maintain with the Imperial Bank is only about Rs. 6 crores, the increase of over Rs. 3 crores in the week ending October 26 should have dissuaded them from persisting in their policy of high yields on their floating debt. We can hardly overlook the salutary effect of Government

declining Treasury Bills tenders last week, when the average rate for the amount of Rs. 1½ crores went as high as Rs. 1-7-8 per cent. This would have been a sharp reminder to the market that the Government would not allow Treasury Bills rates to be screwed up so fast or so high.

There is, however, one hypothesis on the basis of which the Government's present policy in regard to Treasury Bills may be understandable. It would appear that the Government are trying to provide for the middle of November when between the eighth and the twentyfirst the maturities amount to as much as Rs. 10 crores. We can understand a little diffidence on the part of the Government to be able to secure all their requirements from the market by the ordinary process of weekly sales through tenders and through intermediates. The government would naturally be anxious to provide an ample surplus against the heavy demands occuring in the middle of the month. But it is doubtful whether the best way of providing for this contingency is to screw up rates during the present.

It need not be assumed that, if the Government held out for lower rates, there would be a serious fall in sales of Treasury Bills or that the Ways and Means position during this month would be seriously endangered. In making out the ways and means programme for the remaining months of the year, it must be remembered that it is only in the middle of November that there are such heavy maturities. The last week of November is comparatively a lighter period and the first half of December has weekly maturities of only Rs. 1½ crores. While we do not suggest that an unbalanced position may be allowed to develop in regard to Treasury Bills during November, we do urge that there is no reason to display any nervousness about seeing the November maturities through. Above all, there is no reason to believe that lower rates for Treasury Bills would affect the offtake of the market so seriously as to bring about an excess of maturities over sales during the middle of this month.

From the manner in which the Treasury Bills policy has been pursued by the Government during the last two weeks, one wonders whether even in the coming week there may be any fall in the Treasury Bills discounts. The Government seem determined to provide in full for the heavy maturities of November; and it is possible that they think that the best way of providing funds is to offer high rates during a period in which money conditions are exceptionally easy. The response to the increased tap-rate of Re. 1-6 per cent. as against Rs. 1-5 per cent. last week, might prove to be very encouraging to the Controller of the Currency.

Government securities have been through an exceptionally dull week. There is utter stagnation, and 3½ per cent. Paper has sagged during the course of the day to Rs. 91-10 though at one time it was quoted at Rs. 91-13. It is usually assumed that, when rates do not sag in spite of absence of acitivity, the instrinsic vitality of the market is asserting itself against adverse factors which have every chance of proving transient. Though, no doubt, there is no need to take an alarmist view about giltedge, so far as this week is concerned, such steadiness as there is noticeable must be attributed to the strong London advices. It is also suggested that the present state of giltedge is due to the withdrawal of the speculative element from the market. We have ourselves referred on earlier occasions to the transference of the affection of the speculative community of the Marwaris from Government securities to stocks and shares. This has, happily, occurred after genuine investors have come into the scene. Scrips are, indeed, scarce, and the position is, on the whole, not encouraging to speculators who play for large stakes.

But what is striking at the moment is that even in the share section the activity has considerably abated. As we pointed out in the last two issues, the position of the various markets has been such as to put a brake on the upward movement of shares. In the cotton textile section, for instance, the presence of overproduction is a sufficiently decisive factor. In Imperial Banks, there is still a great deal of uncertainty about the negotiations between the Imperial and the Exchange Banks in regard to the former's entry into exchange banking. This week's Clive Street Gossip, which Eavesdropper has mailed from London, taking advantage of the facilities for a full appraisement of the position, should go a long way to clear up doubts and to help the market's judgment of the possibilities. The same reason for pause and reflection exists in the case of the Tata Iron and Steel Company shares. We afford in our *Investor's Supplement* a careful examination of the prospects in regard to the various classes of scrips by Mr. A. D. Shroff. So far as the share markets are concerned, the present mood of reflectiveness is to be welcomed, rather than regretted. The fate of stock exchange speculation in various countries and on various occasions shows that improvement in share prices is best consolidated by the market assuming an attitude of dispassionate judgment at various points.

The exchange market like the others has been extremely stagnant. There is little business passing either way. Bills are few and the demand for remittance is also on the low side. Such business as has been offering is done at too close rates and there is hardly enough to go round. It might be said that business would hardly be available to a bank on other terms.

The closing rates are: 1s.—6 3/64d., T. T. till December; 1s. 6 1/32d., T. T. up to March 15; 1s. 6 1/64d., April T. T. and 1s. 6d., Monsoon months T. T.

Bills were quoted: 1s. 6 5/32d., for Ready and 1s. 6 1/8d., up to March.

Money continued easy during this week also with call money quoting 1 per cent. Onemonth deposits quoted ¾ per cent. while twomonth and threemonths deposits 1 per cent.

1677

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

Last week we ventured to suggest in these columns that the recovery of sterling in the preceding fortnight pointed to the possibility that the seasonal depression of sterling was drawing to its end and that the prospects in the remaining months of the year may be taken as distinctly bullish. The difficulty of taking a definite view about the future of sterling in these troublous days can hardly be underrated. But we believed, and we believe still, that the circumstances are such that one can reasonably venture a clear-cut opinion on this question. The events of the week afford some material in the light of which the validity of our opinion may be judged. In the first place, it may be mentioned that the same opinion seems to have been entertained in London City circles during *Air Mail* week. The first recovery in sterling was interpreted as a sign that the seasonal pressure was exhausted. The fact that sterling had a relapse immediately after this opinion was given expression to made the sponsors of that view waver ; and commercial and financial journals at the time were guarded in the interpretation of current trends. We pointed out last week that "if one were obliged to write this review at the end of last week it might have been necessary to be more cautious in referring to the recovery of sterling and to desist from regarding it as a positive appreciation."

It will thus be seen that the fortnight has made a great deal of difference. While London financial journals still put in a proviso in regard to a possible relapse of sterling in November we rule out as unlikely a depreciation in sterling to the levels of early October. As observed earlier, the course of the exchanges during the week affords material in the light of which our view of sterling can be judged. It is significant that both in relation to the franc and in relation to the dollar, the week has seen higher levels for sterling than during last week. While in the previous fortnight the highest quotation of the sterling-dollar rate was only 4.98¼ the week under review saw the level of 4.98½. In the same way, the sterling-franc rate touched 75.65 during the week against last week's "high" of 75.46. It is not suggested that sterling has had a smooth upward run during the greater part of the week. Sterling has ruled lower than during last week ; but a higher level after some fluctuation, we should think, is a more reliable confirmation of the strength of sterling than even an unimpeded rise. It must also be noted that sterling was very steady during the first four days for which the rates are given in the table at the head of this article ; and this steady level is well above the average rate of the previous week. It may, therefore, be taken that the fluctuations are of the normal inevitable character and that they do not militate against the view we have adopted.

It is not unlikely that some remnants of the Autumnal depression might rear their heads again during the course of November. In these matters it is usual to recall the conditions of previous years and to attempt a judgment on the basis of such conditions. Last year the seasonal weakness of sterling came to an end early in October instead of December. But it must be remembered that nothing can be gained by instituting a comparison between the experiences of last year and the conditions that prevail to-day. For last year, the recovery of sterling nearly two months earlier must be attributed to the flight from the franc and the gold purchase policy which President Roosevelt adopted preparatory to America's return to the gold standard. Such an abnormal situation would have outweighed the continuance of the seasonal demand for dollars ; and so long as there is no reason to expect similar sensational developments, it is no use comparing the present conditions with those of last year.

There is, however, one view of the present position which points to the possibility of sterling resuming its upward course again. It is suggested that the recovery of sterling has been due to the covering of short positions in sterling and to the fears engendered by the rcent happenings at Marseilles. If this view is correct, then the liquidation of the bear position and the emergence of comparative tranquility in continental politics should afford free-play for the commercial buying of dollars. It will be seen that the difference lies in the estimate of the position in regard to the commercial demand for the dollar. There is no need to differ from this view in regard to the cause of the appreciation in sterling. It is not to be supposed that sterling has appreciated merely on the cessation of the commercial demand, such as we have postulated in our view. The positive rise in sterling during the last three weeks can be accounted for only by developments that are positively in favour of sterling; and it is only on the assumption that there is still much of the commercial demand for dollars still left, that the liquidation of the bear position and comparative peace can bring about a marked retrogression.

We have given our reasons for believing that the payments to America on account of imports must have by now been more or less fully effected. Even if any part of the demand should still remain unsatisfied, we have to reckon with the exchange policy of the United States. It must not be forgotten that in certain quarters the view is held that the recent appreciation of sterling is, in fact, due to the anxiety of the American Administration to administer a sharp rebuke to the British authorities for their sneaking fondness for the old parity between sterlingg and the dollar. It will be remembered that, when sterling was at its lowest, there were rumours afloat that the British Government had connived at it, with a view to bring sterling down to the level of 4.86 dollars and then approach America for an agreement regarding the stabilisation of dollar and sterling.

However much the American Government may waver and wobble over the question of a further cut in the dollar, they cannot acquiesce in a rapid depreciation of sterling. And it is understandable that they should be anxious to pull up the value of sterling and to depress the value of the dollar in terms of the British currency. Our Overseas columns refer to the fact that the American Administration have found in continued purchases of silver from abroad a handy instrument of keeping the dollar low. There is nothing in the correspondence between China and America to show that the Silver Purchase Policy will be abandoned. It may, therefore, be said that, even if there should be still something of the commercial demand for dollars left, the coninued purchase of silver will offset it.

TREASURY BILLS

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, October 30. The total amount offered was Rs. 2,58,25,000. Tenders at Rs. 99-10-3 and above were accepted in full and those at Rs. 99-10-0 allotted approximately 71 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-7-10 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Monday, November 5. Successful tenderers should moke payment on Friday, November 9. Other conditions are as usual.

Three months intermediates will be sold from October 31 to November 3 at Rs. 99-10-6 per cent. subject to the conditions previously announced.

Three months intermediates sold from October 25 to 29 amounted to Rs. 1,74,25,000.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, October 31 tenders to the amount of £1,370,000 at 1s. 6 1/16d. were received and allotted approximately 73 per cent.

£1 million will be offered for tender on Monday, November 5 on the same conditions as previously announced.

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

VALUE OF HIGHER SILVER PRICES

To enthusiasts in the cause of silver, the silver purchase policy of the American Government and its results must be an embarrassing enigma. Though the measures advocated by them and those adopted by Mr. Roosevelt are far from identical, it is not open to the advocates of the claims of silver to contend that the results of Mr. Roosevelt's policy leave their arguments altogether untouched. A determined, and not unsuccessful, effort has been made by the most powerful of modern Governments to raise the price of silver. From the low level of 12d. per ounce, which ruled in 1932, silver has gone up as high as over 24d. It is not merely the inflated quotations of a speculative market ; but at this price the American Government have still an unsatisfied demand. Purchases of silver at high rates are being made from day to day by the American authorities. Thus the most important demand of the enthusiasts of silver has been satisfied earlier and more fully than any of them would have dared to hope for in the years of the depression. It is, of course, possible, it is almost certain, that they would insist on the differences between what the American Government have done and what they regard as the essentials of giving silver its place in the world's monetary system. But the rise in the price of silver is, unquestionably, the most important of them and it has been sufficient to enable the world to judge its actual results.

* * *

Theoretically a higher price for silver, in terms both of gold and off gold currencies, should increase the purchasing power of the holders of silver, either as a monetary or as a quasi-monetary metal. There is as yet no evidence to show that higher prices for silver have resulted in the expansion of consumptive demand. Last week, we referred in the course of our money market review to the belief in certain quarters that the fall in the price of silver, which has occurred recently, might affect the demand for the production of India's cotton mills. But how far this feeling is based on an examination of the experiences of the last few months and how far it is *a* mere a *priori* conjecture, it is not easy to say. It may, however, be confidently contended that, if a higher price of silver is to take effect on consumptive demand, it will only have to be through the process of the masses slowly disposing of their silver ornaments and bringing the proceeds into the Indian and the world markets. It is not to be supposed that the middle classes, who, doubtless, have large holdings of silver in various shapes, would proceed immediately to realise the pecuniary advantage from the improvement in silver prices. And it would be idle to expect that the masses would be governed in their actions by the day to day quotations of the bullion market. If the masses are to sell silver, they would do so only under the inexorable pressure of economic necessity, in the same way as economic necessity led them in the past few years to dispose of their holdings of gold. No one will deny that the holders of gold belong to higher strata of society than those from whom a flow of silver might be expected. If even the holders of gold were slow to respond to the higher prices of the yellow metal, the process in the case of the white should be evn slower. Even if ultimately the present hoards of silver in India and other countries should thaw and melt, it is by no means certain that the stream will be a big one, or that the ultimate mobilisation of silver would redound to the lasting benefits of Indian and world economy. It is therefore well to note that it is idle to expect any electric effect on consumptive demand from the rise in the price of silver.

* * *

Whether or not in the long run the holders of silver among the masses might benefit from the policy of the American Government, it is certain that in the present it has led to an awkward *impasse* between America and China. It must have come as a grievous shock to the enthusiasts of silver that the first and the most reasoned protest against America's purchases should come from a country which was supposed to be the first beneficiary of every rise in the price of silver. We have touched on this question on a former occasion in the "Finance Abroad" section, but it is necessary here to reiterate the effect of the rise of silver in China's national currency and economy. It is obvious that, for a country on the silver standard, every rise in the price of the metal must have a deflationary effect. The external value of the currency is subject to a sudden and artificial increase and the usual consequences of a rise in the exchange naturally follow. Silver flows out of the country causing a fall in the stocks of the metal and eventually a fall in the internal circulation. Exports are impaired because of the high value of the currency in terms of foreign moneys. The psychological effect of these changes is far more on China than the effect of an outflow of gold and a contraction of currency on a gold standard country in the pre-War period. For in those times these changes would be cheerfully accepted as a natural consequence of an international monetary regime. But now that the rules of any international monetary regime are openly repudiated and the mark of wise monetary policy is consistent and unbroken depreciation of the exchanges, China may well chafe at a sudden imposition of the rigours of high exchange on her industry and trade. China had, indeed, suffered a considerable efflux of the metal as a result of the American policy. Her exporters, too, had experienced great difficulty in maintaining their markets. And no wonder, therefore, that China handed a note of protest to the American Government drawing the attention of the latter to the harm which the silver purchase policy inflicts on her.

* * *

The Chinese Government pointed out that "the rise in silver discourages the export of commodities and thereby impairs China's purchasing power in imports." And it was, therefore, urged that "American co-operation to prevent a further rise in the price of silver and to maintain its stability as contemplated in the London Agreement is particularly important to China." The note, therefore, suggested that America should restrict purchases for the present to silver already in America. The American Government took a long time in replying to the Chinese note, and eventually urged that the silver programme was embodied in a mandatory act of the Congress. "In conducting operations under the Silver Purchase Act," the note continued "while necessarily keeping within the general purposes of the enactment the Government will give the closes possible attention to those possibilities, so arranging the time place and the quantity of its purchases as will keep in view the considerations put forward by the Chinese Government in its *communique*." Mr. Hull, who drew up the note, concluded with the declaration that he would be glad at any time to explore these problems with the Chinese Government's representatives.

Thus the first result of the American silver purchase policy is China's insistence on stability as more important than the high level of the price of silver. The disappointments, which China has caused to the enthusiasts of silver, have not stopped at this, American's purchase of silver being unaffected by the Chinese protests. The American reply to the Chinese note, though, no doubt, conciliatory in language, actually shows no accommodation to the Chinese viewpoint. The emphasis on the mandatory charactor of American silver legislation shows a determination to persist in the policy of aquiring more silver from abroad. And in the present state of America's monetary experiments, the purchase ofsilver has, indeed, a large and vital place. It was only the other day that a prominent member of the American administration expressed the view that in acquiring silver, America's aim is to provide the means of payment for her foreign creditors. Though this sounds very obliging, the action might also be interpreted as reducing the upward pressure of the exchanges on the dollar. At the present time, when the American Government are undecided about a further cut in the dollar and when circumstances are not fovourable to the adoption of such a course, the Government may well cling with particular firmness to the value of silver purchases in depreciating the exchange. This explains the tone of Mr. Hull's note. While America may be quite prepared to discuss with China the possibility of eliminating such conflict as there may be between her purchase of silver and latter's interests, it cannot promise to abandon the programme.

* * *

With so slender a hope of America's abandonment of silver purchase, China has naturally proceeded to safeguard her interests. She has imposed a duty of 10 per cent. on the exports of silver and a surcharge equal to any profit that may be made on the export of silver through arbitrage. The practical effect of these regulations is to prevent all efflux of silver from China, except through smuggling. The extensive frontier and the inefficiency of administration in that country leave a larger loophole for smuggling than one might ordinarily expect. But it is certain that it will not be sufficient to alter the essential character of the new regulations, or their effect in bringing about a virtual abandonment of the silver standard. The fact that during the week following these regulations, the Chinese currency declined more than the fall in the price of silver shows the practical effect of those regulations. Even more significant is the report that China is considering a change over to the gold standard. There has, no doubt, been a formal official announcement that China intends to maintain the silver standard. But the report that she is exploring the chances of adopting gold is not only not contradicted, but has been strengthened by the proposal that America should part with her gold in return for Chinese holdings of silver. The American Government, too, have not shown themselves opposed to this proposal. It might well be that in the coming months there will be an exchange of gold for silver between the two countries. China has long been uncomfortable in her isolation as a country with a silver standard. The fall in the price of silver during the depression years and the recent rise under the pressure of American purchase, have alike created difficult problems in that country. And it is quite understandable that China seeks to escape from these successive embarrassments by coming into line with the rest of the world. While these developments could have been expected even in the normal course, it is significant that they have been accelerated by a policy designed towards increasing the price of silver.

* * * *

That a higher price of silver should have the effect of driving China off the silver standard should be most unwelcome in the eyes of the enthusiasts of silver. How they are going to resolve the conflict between these experiences and the view they have urged remains to be seen. We may concede that the advocates of universal bi-metalism with a higher ratio between gold and silver are always on unshakable ground. We may concede, too, that the natural rise in the price of silver such as would bring about large movements of silver from one country to another would also have the beneficial effects on world economy, which have been claimed by the supporters of silver. But to the extent that they have advocated artificial measures they would seem to have been proved in the wrong by the events of the last few months.

THE MISCHIEF OF MONEY-LENDERS

The ways of Indian usurers in relation to small wage earners and agriculturists are notoriously sinister and much sympathy is spent on the victims. Usury is an ancient vocation and the Indian usurer is probably no worse than his confrere in other countries and in other ages. That the Indian usurer's tentacles spread over the economic life of agriculturists and manual workers to their ultimate undoing is an unquestionable fact which is responsible for attempts at inhibiting legally the unscrupulousness of moneylenders. The Royal Commission on Labour and the Central Banking Enquiry Committee recommend active protective legislation. "If the Act (Usurious Loans Act, 1918) were fully utilised", observed the latter, "it would go far to relieve the country of some of the worst evils of uncontrolled usury". While recognising the limitations of the Usurious Loans Act, the Royal Labour Commission commented that "the reluctance of civil courts to deal with issues not raised by the pleadings seems to have been the main obstacle to protecting the agrarian and industrial borrowers". It is pointed out that the rigidity of courts in enforcing the letter of the law

in unconscionable debt contracts operates in favour of the moneylender.

* * *

In the pre-British period judicial authorities refused to be instrumental in enforcing what they did not believe to be just debt claims, interpreting contracts more in terms of social equity than legal inflexibility. The obvious dangers of such a procedure in the complicated society of to-day are not underrated, but informed opinion, none the less, adheres to a course in which the long economic view is favoured against illiberal legal findings. Legislation has, therefore, been seeking the line of least resistance both to law and society. Provincial Councils have introduced Bills designed on the basic consideration that the case for State regulation of the business of moneylending is stronger than that for the protection of labour. The most comprehensive of these Bills is that put before the Bombay Legislative Council by Mr. Syed Munawar. The Deccan Agriculturists' Relief Act and the Usurious Loans Act have proved infructuous, principally because of the ignorance and weakness of agriculturist borrowers; and it is held that legislation that secures their emancipation from usurious contracts is in the first line of a general protective scheme. Mr. Munawar's Bill aims at eliminating the ignorance of borrowers.

* * *

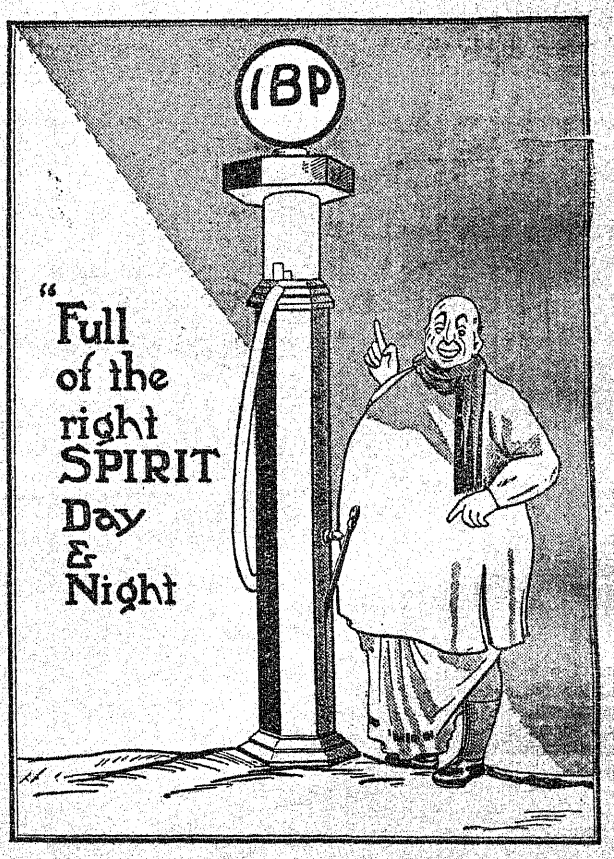
Mr. Munawar provides for certain well-recognised forms of keeping accounts in the business of moneylending, not only in the interest of the ignorant borrower, but as a condition precedent to the utilisation of the State for the execution of judicial debt decrees. The Royal Agricultural Commission and the Banking Enquiry Committee stressed this point, but no remedial measures are yet in operation. In seeking to fill this legal hiatus, Mr. Munawar proposes that there shall be a clearly ennunciated direction to the judiciary to implement the intention of protective legislation. The special procedure of the Bill is to apply only in such cases as concern debtors whose aggregate income does not exceed Rs. 2,000 and who have borrowed a sum not exceeding Rs. 1,000. In disputed and admitted claims it shall be obligatory on the Court to examine both plaintiff and defendant as witnesses to ascertain the whole history of a transaction. In both cases the Court shall go into the merits of the claims, unless, for reasons to be recorded in writing, such a course is considered unnecessary. Particular attention is to be paid to interest and principal payments. Moneylenders are required to keep their accounts in a form specified by the local government. They have to furnish each debtor with quarterly statements of detailed accounts of their transactions. Some of these provisions are controversial, notably that which places on the Court the onus of going behind the contract and giving an ultra-judicial decision. But as a substantial step to check the practice of unregulated moneylending the Bill will command public support.

* * *

An official Bill with the same object is before the Punjab Legislative Council. The extent of the tyranny of usury was cited by an unofficial Member who told the Council of a case in which a creditor had obtained a decree from the Punjab High Court for Rs. 7,000 on an original loan of Rs. 23. The opposition to the Punjab Bill sponsored by Mr. D. J. Boyd, the Finance Member, suggested that the Bill would enable big landowners and moneyed persons among the statutory agricultural classes to mulct debtors. A year ago the Bengal Legislative Council modified usury by a statutory limitation of interest to 18 per cent. per annum and gave effect to the Royal Commission's recommendation that wages up to a hundred rupees a month are not attachable in execution of a debt decree. In Bengal the problem of indebtedness is not confined to agriculturists, though their case is certainly the worst. The lower middle class, mostly artisans, vendors, shopkeepers, railway subordinates, menials and mill hands, is crushed under a burden of perennial indebtedness. Their slender earnings are pledged in perpetuity to Kabulis, who practice usury with a lethal lathi in contempt of Courts. A ruinous rate of interest which in eight months covers the principal is extracted by open intimidation, their victims acquiescing in their own progressive spoliation. A Court cannot protect them as they are intimated by threat of assault into payments. The deportation of these undesirables who operate in industrial centres and selected urban areas has been suggested as the only practical protection to those (and their name is legion) on whom they batten.

ROADS

India is a country of vast spaces and bad roads. Within the last twenty-five years urban India has renovated some old roads and made a few new ones to accommodate commercial traffic and accelerate social amenities. Suburban India remains roadless in the modern sense. The path-way across paddy fields precarious in the rains ; a narrow stretch of dust and dirt leading to a desolate dak bungalow : village short-cuts through tortuous terrain of interminable ruts on which the bullock cart wends a weary way—these connect real India. They are commented on in unprintable expletives by an adventurous or ignorant motorist standing by his immovable car. A perigrinating high official passes by in his saloon and in his report puts in a para about improving rural roads.



THE INDO-BURMA PETROLEUM
COMPANY, LIMITED.
RANGOON
Branches:
CALCUTTA BOMBAY CHITTAGONG.

And that would have been yet another static feature of India but for the advent of the motor car and the motor bus. These modern "carriages" require good roads and roads rose abruptly to a position of prime importance in the programme of Government.

* * * *

The usual technique was observed. District Boards and public bodies were consulted and conferences convened thereafter. Liveliness was introduced by a discussion as to relative importance to the taxpayer of railways or bus, of which the echoes have not yet died out. The private bus ploughing through transport adventures and the projected railway bus have created a demand for serviceable roads, setting in motion the machinery of Government. The Indian Roads Congress, commencing on December 4, at New Delhi, will be attended by about seventy delegates representing various business interests. These delegates will tour the Punjab and the North West Frontier Provinces to acquire first hand knowledge to be released subsequently at the Congress. The provisional programme of the Congress is picturesque. The delegates will travel by car on various sections of roads, taking in Amritsar, Lahore, Gujrat, Attock, the Khyber, Lyallpur, Jharanwala, Mandi and back *via* Lahore to Delhi. Other routes in other Provinces are not included in the itinerary, presumably because they have been already explored and deplored. The Congress will discuss papers submitted by delegates which will deal with road construction and repair. The Congress is the materialisation of a recommendation to the Central Government by the Standing Committee for Roads which is functioning in lieu of a Ministry for Transport which has been suggested, the idea being that there must be some machinery for the regular pooling of knowledge and experience and the periodic examination of results obtained here and elsewhere, notably the United States, where road construction has come in for a good deal of expert attention.

In regard to Bengal where bad roads or no roads affect economic development and distribution disastrously, important decisions were taken at a conference of Chairmen of District Boards who recently met at Darjeeling. The Government of Bengal have made a contribution to road construction and maintenance and the Conference suggested that roads should be a first charge on District Boards receipts from the Motor Vehicles Tax Fund. Should this allocation prove inadequate, as it certainly will, the Conference suggest that the Local Government be requested to make up the deficit out of the Petrol Fund. It was decided that the District Board Chairmen's Conference should be an annual fixture.

MANCHUKUO OIL AND TROUBLED WATERS

Japan's acquisitive policy in Manchukuo is progressing from stage to stage. The latest development is likely to have far-reaching international reactions. In September, the British representative at Tokyo submitted a memorandum stating unequivocally that, in the opinion of His Majesty's Government, the proposed action of the Manchukuo Government in giving a monopoly of the oil refinery business to a Manchurian Petroleum Company would constitute violation of the "open door" clauses of the Nine Power Treaty. According to the Tokyo correspondent to *The Times* this memorandum has not been officially answered ; but a Japanese spokesman is reported to have said that his Government's view is that the Nine Power Treaty applied to China, which no longer includes Manchukuo. The correspondent adds that, in spite of foreign representations, a Manchukuo Monopoly Law will soon be promulgated, which will probably be slightly modified in deference to the British representation.

It is known that correspondence has been exchanged between the British, American and Dutch Governments and the Japanese Foreign Office for several months, though there has not been any joint action against Japan. Japan's repudiation of responsibility for the decision of the Government of Manchukuo is a diplomatic device which has grown stale with frequent use. The relations between the United States and Japan are not, according to the Washington correspondent of *The Times*, likely to improve from the Japanese demand that oil companies in Japan proper should increase their tankage so as to have in stock at all times a quantity equal to six months' consumption. This demand is interpreted in Washington, apart from other considerations, as a device for the continual possession by Japan of naval fuel. The Manchukuo oil monopoly leaves little doubt that monopolies in other commodities will follow. In conformity with this demand, the suggestion alleged to have been made by a Japanese naval officer at an official function at the Japanese Embassy in Washington that American oil companies should by acquiescing in the Manchukuo monopoly strengthen the Japanese naval arm, because of the admission that the United States has little need of a navy, has a diplomatic significance. The possibility that the Japanese oil policy may invite American reprisals is not overlooked by Japan, because commercial retaliation has often re-actions other than economic. Japan is apparently dealing out a diplomatic hand after the manner of the best European master dealers.

INDIAN PIECEGOODS FOR CEYLON

The Committee of the Bombay Millowners' Association in the proceedings for September draws attention to the Ceylon market for Indian cotton piecegoods. Towards the end of July, the Governor of Ceylon restricted imports into Ceylon of cotton and artificial silk piecegoods for the quota period May 7 to December 31, 1934, and for each succeeding year. By another notification dated August 1, 1934, the Ceylon Government stated that imports of all regulated textiles manufactured in Japan had covered the fixed quotas for the quota period, May 7 to December 31, 1934.

* * *

The application of the quota system to imports of foreign cotton piecegoods, specially from Japan, should, the Bombay Millowners' Association remarks, greatly improve India's chances of regaining the ground lost to Japan in recent years and enable India to expand her piecegoods trade with Ceylon. The total imports of cotton piecegoods into Ceylon during 1927-33 averaged 62 million yards, of which 17 million yards were bleached goods, 25 million yards coloured goods, 4 million yards grey goods and 16 million yards printed goods.

* * *

In 1932 and 1933 Japan's share amounted respectively to 40 million yards or 59 per cent. and 41½ million yards or 68 per cent. of Ceylon's total of imports of cotton piecegoods.

* * *

In the last two years India's share was respectively 11 million yards or 16 per cent. and 9 million yards or 15 per cent., while the United Kingdom's contribution was respectively 16 million yards or 23 per cent. and 9½ million yards or 13 per cent.

* * *

On the quota system Japan's total annual imports into Ceylon will be limited to 11.7 million yards from January, 1955. Comparing this figure with imports from Japan into Ceylon in the years 1932-33, it would appear that trade amounting to 30 million yards of cotton piecegoods would be released to be shared principally between the United Kingdom and India. The prospects of the Ceylon market induced the Bombay Millowners' Association to decide on sending a representation to Ceylon to study the situation. It is expected that Mr. Jamshed W. Mody, the representative, will proceed to Colombo early this month.

1, FAIRLIE PLACE, CALCUTTA

THE GATEWAY OF INDIA

(From Our Correspondent)

Bombay, Nov. 1.

With the end of the Congress, Bombay has faded out of the picture. The end of the Congress Session usually synchronises with the paling off of interest and the Worli session was no exception to the rate. The tumult and the shouting have died ; and the poor journalist is left to draw his inspection from the dull monotony of Bombay life these days.

The anti-climax, from a journalistic point of view, is indeed, very noticable. From the cynosure of all India for an all too brief week, Bombay has become an ordinary port town remarkable only for the even and uneventful tenor of her way. It must, of course be admitted that Bombay can spell news with a capital 'N', when she is so inclined. The textile strike proved that there are very violent eddies under the smooth stream of Bombay's industrial life. But these are exceptional events; and in their absence Bombay is as quiet as the grave.

Even the cheap attraction of a Council session is absent and a too-often repeated reference to the affairs of the Corporation is hardly sanitary enough for the public appetite. Worli, may, indeed, yet prove the journalist's undoing.

From Congress polemics to road accidents is a commonplace transition: but as commonplace matters encompass us around, the transition has a quality of reality. So Bombay is exercised in mind at an alarming increase of road accidents. Bombay is considering its traffic problem from various angles, principally from the point of view of re-introducing the speed limit. At present the Bombay citizen has to take what comfort he may from a proposed improvement of the traffic islands at Hornby Vellard and Flora Fountain and the linking up to one-way of the road connecting Peddars Road and Alfamount Road.

One has perforce to fall back on Karachi for news. Aerially speaking, Karachi is at least one of the "also rans." But she has more than merely aerial pretensions. She claims to be a port ; and if recent railway and shipping developments are to be trusted, a port of increasingly growing importance. The recent freight rates adopted by the Railway Board have greatly affected Karachi's fortunes as a port. The export of wheat to Calcutta and of foodstuffs to Madras by sea has been directed to the rail route. No one can have a grouse against the Railways wanting to come into their own especially when the stupid freight war carried on by the shipping companies has caused such a palpable shrinkage in the railway revenue. But it would certainly be unfortunate if Karachi suffered a diminution of her glories as a sea port. Mr. Hoshang Dinshaw, in the course of his address at the annual meeting of the Buyers and Shippers Chamber at Karachi, stressed this point. He drew the attention of the house also to the problem of growing importance of the port of Bhavnagar, a growth which is chiefly at the expense of Karachi. It would, indeed, be a pity if Karachi comes to be known merely as a halfway house for ambitious aviators.

It is common knowledge that the Bhavnagar Durbar entrenched behind certain alleged State rights is bent on diverting the trade of Bombay and Karachi through Bhavnagar port into British India. Negotiations were going on in Delhi between Sir Alan Parsons on behalf of the Finance Department and Sir Prabhashankar Pattani, Diwan of Bhavnagar. Sir Alan's departure for England and Sir Prabhashankar's illness suspended the negotiations ; but I gather that Bhavnagar is all out to collect the Customs revenue accruing from the scheme of putting Karachi and Bombay on a siding. Nor in this connection can Cochin's bid for the development of its ocean port be overlooked. Cochin, like Bhavnagar, rests her claim under a duty affecting Customs when the tariff was 3½ per cent. Involved constitutional issues arise from this appeal to rulings no longer real and a way out cannot be put off much longer.

I had, occassion a few weeks ago, to refer to the progress that is being made in the fishing industry in Bombay. The *Lady Sykes* has now been joined by the *Sir Federick Sykes*. These two motor boats will undoubtedly help forward an industry which has a specially glorious future in India. The ignorance that surrounds matters piscicultural and the lack of enthusiasm evinced by the people for the fishing industry are a crying indictment against industrial efficiency of India. It is to be hoped that Sir

Frederick and Lady Sykes will achieve as much success on water as they have, undoubtedly, done on land.

Another matter, which is engaging the attention of the authorities, is the smuggling of silk into Sind through Baluchistan. The *modus operandi* is to send silk through the free port of Pasni into Sind *via* Baluchistan and Quetta. There are British Customs officials at Pasnia; and there is no difficulty for the Assignee to transfer the goods by motor car or by camel convoys to other Indian markets. This practice will, no doubt, be checked, now that the authorities have taken cognisance of it.

Nagpur has proved a worthy follower of the Congress creed. Even before the acceptance by the Congress of Gandhiji's scheme for the establishment of a Home Industries Association, the local Government at Nagpur were considering schemes for the improvement of the handloom industry in the Central Provinces; and a special grant of Rs. 7,500 and an annual grant of Rs. 1,000 for a period of five years have been sanctioned for this purpose. There are many who fail to understand the reason of the emphasis that Gandhiji lays on the spinning wheel; but there are few who do not admit that an improvement in the prospects of the handloom has a national importance. The foresight and vision exemplified by the Nagpur authorities is indeed, praiseworthy.

And here the budget endeth. A correspondent of a newspaper who has the misfortune of being stationed at Bombay has to be a bit of a conjurer to enable him to keep the wolf from the door. Unless he has the power of producing rabbits from a hat or such other useful gifts, he is likely to evoke the not too infrequent wrath of the edifor—and those who are in the journalistic line know that the frowns and favours of Jove are the things that count. Under the circumstances, I can but express the pious wish that Bombay should grow in 'news' importance, so that the weekly report may be less barren than it is. At times I have been almost selfish enough to desire another textile strike at Bombay!

CONDUCTED TOURS

Eavesdropper in one of his "gossips" pleaded for the Railways undertaking to show people round the Tata Iron and Steel works at Jamshedpur. Such action would in their case be twice blest. It would bless the Railways through the increased traffic and the people through the educative value. In a country like India the educative possibilities of tours are, indeed, immense. And where the Railways are the property of the state and the masses are steeped in ignorance, there can be no stronger case for such tours. The B. N. R. are to be congratulated in showing the way. To be able to enjoy a joy ride to Jamshedpur and back in the second class and see the great steel works at no more cost a couple of tenners is an opportunity which, we are sure, the public will jump at with avidity. Will the conducted tours be a regular feature of every week-end and every two-day break from work?

"KARMA"

The tremendous improvement in technique and treatment of Indian films is apparent in every set of *Karma* which opens this evening at Madan Theatre and Palace of Varieties. *Karma* is a notable production. The setting of the story has the fascinating background of the Indian States and the story weaves itself in the love of a Maharani for the son of a Maharaja. The songs in English have a haunting lilt and Himansu Rai gives an arresting exhibition of fine film act, with Devika Rani at her alluring best. Abraham Sofaer as the Holy Man puts a degree of reality into a difficult role. *Karma* is sure to have a wide appeal, specially for Indians. Its presentation at Madan Theatre gives Europeans a chance to see a picture which combines the best of Indian high romance with the best of Indian high talent.

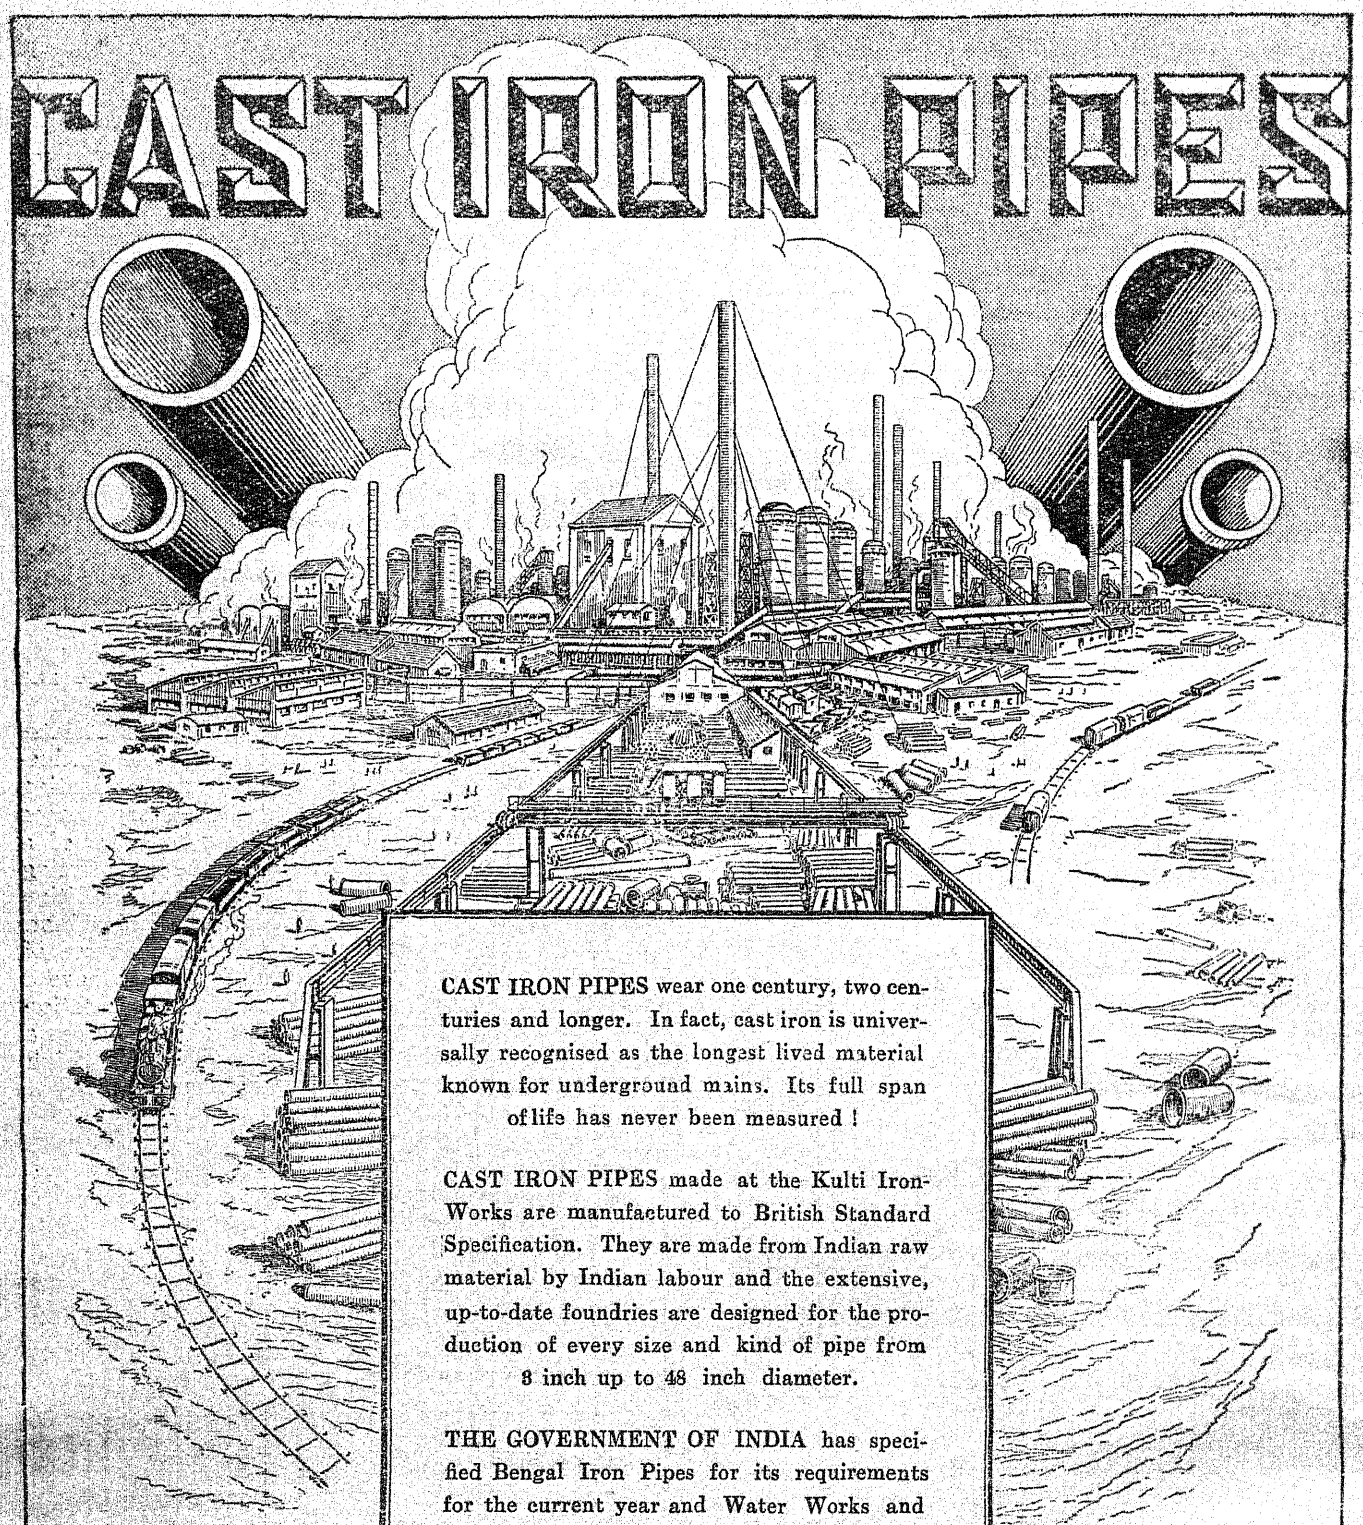
CAST IRON PIPES



CAST IRON PIPES wear one century, two centuries and longer. In fact, cast iron is universally recognised as the longest lived material known for underground mains. Its full span of life has never been measured !

CAST IRON PIPES made at the Kulti Iron-Works are manufactured to British Standard Specification. They are made from Indian raw material by Indian labour and the extensive, up-to-date foundries are designed for the production of every size and kind of pipe from 3 inch up to 48 inch diameter.

THE GOVERNMENT OF INDIA has specified Bengal Iron Pipes for its requirements for the current year and Water Works and Drainage Engineers will find that they ean obtain all their needs from the same source.

London, Oct. 20.

Arriving in London last Saturday afternoon amidst weather conditions, which the Daily Press prophets described as "to-morrow colder and day after still colder", it has taken me all these six days to get accustomed both to the new climate and the new environment. On first arrival, it was all so bewildering; but I can now claim that I can safely pick my way about in the city. And this has been somewhat easier as Sir Osborne Smith, who will be here till next mid-week, has willingly and readily given all the necessary introductions and Mr. A. D. Shroff has been shrewdly guiding me alike in the labyrinths of the city lanes and the city business. It is, therefore, natural that my gossip on this occasion should bear largely on the important activities in which both these friends have been interested.

Sir Osborne has not been in London on a holiday. Far from it. He arrives in the City at ten and has engagements at the rate of four per hour. These are related with delicate and important negotiations in connection with the expanded business activity which the Imperial Bank will be in a position to undertake when the new Act releases it from a good many of the shackles of the old Act. I am now in a position to confirm the correctness of the report, which I sent across three weeks ago from Bombay in regard to the acquisition by the Imperial Bank of a controlling interest in one or two of the existing exchange Banks. The matter is still in the stage of negotiations. And as is to be expected, no information is allowed to leak out. But I would not be far wrong if I say that, so far as the Eastern branches of Lloyds Bank are concerned, it has been definitely decided that the Imperial Bank would take over this business; that, as regards the Mercantile Bank a definite scheme has been drawn up and handed over to Mr. Bunbury for detailed discussion at a meeting of the Central Board of the Imperial Bank; and that the Eastern Bank has not so far come to terms. The hurried departure of Mr. Bunbury from London and the sharp rise in the Mercantile Bank shares in Throgmorton Street are, I think, fairly reliable evidence that my conclusions, as stated above, cannot be wide of the mark.

In initiating these negotiations for the purchase of controlling interest in one or two exchange Banks, Sir Osborne would appear to have been guided by two important and commonsense view considerations, the first is that it will be next to impossible to foist exchange banking on the Imperial Bank, whose staff has specialised in internal banking and would not easily assimilate the technique of exchange banking, which is altogether different and special. The second is that, as there are far too many exchange Banks for the existing volume of this kind of business, it were best to initiate the exchange banking activity of the Imperial Bank in a way that will not add to the number of exchange Banks but reduce the separate units. From the latter point of view the move of the Imperial Bank must be welcomed by the older exchange Banks. Sir Osborne will thus have this great achievement as a culmination of his eventful and successful Governorship of the Imperial Bank during a period of exceptional difficulties and special problems.

In this connection I would like to make a suggestion which would, so to say, commemorate the distinguished regime of Sir Osborne. And my proposal is this: In the dividend that will be announced next January for the current half year, shareholders shall be given a welcome gift of an extra two per cent. as a bonus. The dividend was reduced four years ago from sixteen per cent. to twelve per cent. on account of the ravages caused in the giltedge portfolio of the Bank by the credit-wrecking borrowing policy of Sir George Schuster. Now that all this damage has been repaired and considerably larger gains attained, it is time that the dividend policy is reconsidered, with a view to giving a return to shareholders something midway between the original dividend and the reduced dividend. Firstly the big slice, that was cut off from the published reserves on account of the heavy depreciation in Government securities, has now been restored, not by the appreciation that has since taken place in giltedge, but from allocations made in balance sheet after balance sheet. In other words, the reserves to-day are immeasurably stronger than they were before the appropriation made early in this decade. The published reserve is now nearly equal to the paid-up capital and the inner reserves should be well over half the capital. This means that the provision for reserves in coming years need not be on the generous basis, which was the characteristic feature of these four years. In these circumstances lesser reserve and bigger dividend are not only justified but essential in the interests of fair treatment to shareholders. Secondly, between the exciting annual meeting of 1931 and now Sir Osborne and Mr. Shroff have turned from sworn enemies to fast friends; and the biggest supporter for the Bank is the vociferous Shareholders' Association of Bombay. The Bank has succeeded in reducing expenditure so effectively that there is actually a saving of nearly Rs. 20 lakhs every year. This factor alone should justify the enlargement of dividend. Thirdly, it is now more or less certain that some portion of the assets of the Bank will be invested in the shares of subsidiary companies, the return from which should be far larger than the one to two per cent. which the Bank has been getting on Treasury

Bills. There is also the greater freedom for business in other ways which the new Act promises; and it may be taken as certain that both the banking profits and the total earnings of the Imperial Bank should show progressive increase in the future.

———

I know that financial purists might criticise me for my suggesting an increased dividend, while business conditions continue unsatisfactory and banks all over the world are still finding it difficult to find remunerative investment for swelling idle funds. I say that while this argument is true of most banks, there are special factors which lead us to think that the Imperial Bank cannot but augment its earnings in the new regime. Fourthly, the period of uncertainty may now be said to be at an end so far as the Imperial Bank is concerned. Till sometime ago, the Bank authorities could not know clearly what exactly would be the terms of the agreement between itself and the Reserve Bank. Nor was it easy to know definitely whether the recovery in giltedge would prove only shortlived. There are no longer any doubts in regard to these factors. The agreement which has now been decided on as between the Imperial Bank and the Reserve Bank is fair to all the interests concerned, and the Bank now knows what exactly is the profit it can make on the handling of Government business. Nor is the future of giltedge in doubt. Further rise in Government securities will not be as spectacular as in the last two years; but the question of a setback can be definitely ruled out. With matters thus cleared up and with new arrangements so precise, there is no longer any necessity for continuing the cut in dividend. Fifthly, there is every reason to believe that the privilege of undertaking exchange banking business will prove of special value to the Imperial Bank and will yield extremely gratifying results. As Mr. Shroff has remarked in a memorandum prepared by him for London investors, what with the large number of banking offices that the Imperial Bank will continue to maintain; what with the very extensive and valuable business connections which it has built up during its existence of fourteen years; and what with the facility of obtaining foreign bills at the very source, it is reasonable to assume that the Imperial Bank will come to command a large share of the exchange business of the country.

While I have given five good and solid reasons why the Bank will be earning more and can therefore inaugurate an additional two per cent. bonus, I can hardly think of one reason which will justify the perpetuation of a procedure necessitated by a conspiracy of adverse conditions. There is to-day a conspiracy of favourable conditions and propitious factors. The inauguration of the new regime and the elevation of Sir Osborne Smith to a position of yet higher responsibilities may fittingly be celebrated by the kind of bonus I have advocated. I have deliberately called it a bonus. If, notwithstanding present indications, events in the future should turn away, it would be easier to modify a bonus rather than the stereotyped dividend rate.

Mr. Shroff has, in the surprisingly short time of two months, established for himself a great repute in City circles. In addition to winning for himself a commanding position both with leaders of Stock Exchange business and leaders of economic thought, he has done invaluable service to the cause of Indo-British partnership in investments. During his stay here he has been able to interest a large number of Indian clients in British securities. Equally successful has he been in arousing interest in Indian securities on the part of London investment trusts and other classes of investors. I spend at least two hours every day in his room in Throgmorton Street; and it is with great pride and pleasure that I watch the respectful attention which he commands from the stalwarts of the Stock Exchange. This interchange of business has reached such dimensions that he puts through at least four telephone calls to Bombay every day. London has invested fairly considerably in Imperial Bank shares and Tata Steel Second Preference. By the same token, Bombay has purchased parcels of Mercantile Bank shares, British Burma Petroleum, Burma Corporation and sundry other mining shares. The experience, which he has gathered in these two months, is something which a man of lesser understanding and poorer experience would not acquire in twenty years.

It would be very fortunate for India and her new Reserve Bank if Mr. Shroff were to be chosen as the Deputy Manager. I have on former occasions pressed the claims of Sir Shanmukham Chetty to this post. While there can be no question about the competency of Sir Shanmukham to discharge the responsibilities of this office, there has been technical difficulties in the way. I have myself referred to the fact that so eminent a personage as Sir Shanmukhan cannot accept the position of the second Deputy and get cut off from the chances of taking the helm of currency and exchange in India. And as Government are determined to have Mr. Taylor as first Deputy, Sir Shanmukham's chances of securing the post for which he was cut out were very slender, indeed. Mr. Shroff shows a happy way out of the impasse. While he is unquestionably competent, he is also sufficiently a junior to give precedence to Mr. Taylor. I do not know yet how far his appointment has found favour with the Government. But if Mr. Shroff should fail to secure it, I have my premonitions that preferment will go by letter and affection.

OVERSEAS' NEWS: By Air Mail

U. S. A.

Mr. ROOSEVELT'S OPEN MIND

The much advertised open mind of President Roosevelt in regard to the measures which he would adopt to pull America out of the depression into which she had fallen, and perhaps more deeply than most nations of the world, has a two-fold effect. On the one hand, the President himself rarely tries to make up a premature decision on the question referred to. Throughout the Recovery Administration the President has shown himself to be ready at every point to change his mind and his methods. The most favourite and common weapon which politicians use against their opponents namely, a charge of inconsistency, is thus rendered completely innocuous. To charge one, who has openly admitted the experimental character of every measure he adopts, with inconsistency, has no meaning. President Roosevelt thus enjoys a particularly advantageous position in normal political controversies. It is open to people to denounce his measures as inexpedient, unwise and what not; but the ordinary tactics is ruled out. The other effect of the open mind is that business circles are rarely able to make any forecast of what the President would do. Very often the practical insight of businessmen enables them to foresee the actions even of those statesmen, who are in their own minds undecided. And such forecasts are made possible by a general understanding of the character of the statesmen and their inclinations, of which the statesmen themselves are often unconscious. In the case of the Recovery Administration such forecasts have not been possible, because President Roosevelt's actions are governed by a variety of factors which are incapable of assessment by outsiders.

There have been many instances of such uncertainty in the past one and a half years. But rarely was the policy of the Administration more in doubt than at present in regard to the question of a further cut in the value of the dollar. Mr. Roosevelt's recent announcements have been more mystifying than ever and have reflected most accurately the conflicting considerations which have brought about the attitude of indecision. On the one hand, there is the dissatisfaction with the progress which the national economy has been making since the return to the gold standard in January last. On the other, there is the certainty that with further talk of devaluation the little chance there is of putting through the refinancing programme of the Treasury would be destroyed. It is true that the last issue of the Treasury was far from a failure; but the partial success indicates the unreadiness of investors to take up Government issues, so long as there is the danger of the dollar being further reduced. No one would walk with open eyes into the danger of one's investments being reduced in value, especially when such reduction might come about through a fiat of the Government. It is true that the success of the Government's new loan programmes is not so largely dependent on the attitude of investors as in the case of other governments. To the extent that the Government have kept a hold on the banking system of the country through the shares bought by the Reconstruction Finance Corporation, the Government can, at any moment it chooses, ensure a certain percentage of subscriptions for their new loans. But it would be an obvious folly to exaggerate the extent to which the Government can dispense with the spontaneous support of investors.

That the investing classes do not take kindly to further measures of inflation is also shown in the opposition to the proposal of creating a new Central Bank for the United States. It is, indeed, strange that so far-reaching a measure as the creation of a new bank to supersede the present system of Federal Reserve Banks was scotched so soon after its introduction. The Committee of Economists who were originally credited with contemplating proposals of this kind, changed over sharply to another sphere of activity. This surrender on the part of the Government is all the more significant, if we remember that Mr. Roosevelt has never lost a battle with the Federal Reserve Banks. There has been no measure of monetary or exchange reform in which the Federal Reserve Banks and the President have seen eye to eye. The former has always opposed the measures favoured by the latter; and on at least one question there was a very determined battle between them. I refer to the nationalisation of gold stocks and the Government coming in for the profits on the revaluation of gold. It will be remembered that the Federal Reserve Banks took the view that, in as much as the banks owned the share capital they ought to be regarded as the proprietors of the gold in the reserves, and that, any profit that might accure from a devaluation of such gold ought to go to the banks. There is no legal validity in this view as we insisted at that time. There can be no distinction between individual possessors of gold and corporations who happen to have large holdings of the metal. The arguments which Mr. Roosevelt adduced in favour of the nationalisation of gold stocks were, indeed, irrefutable. And taking advantage of the mass of popular sentiment in favour of the recovery campaign, Mr. Roosevelt carried through his measures. And ever since then the President and his advisors have thought it desirable that the power of the Federal Reserve Banks to oppose the Administration ought to the undermined. Besides, the Federal principle in the banking organisation of America is growing obsolete from day to day. There is no longer the same need for federalism in American banking as when the system was first conceived. The consideration and the unity of American banking has been growing apace; and, considered on its merits, the proposal for creating a Central Bank for the whole of the United States is worthy of consideration and full examination. But the country was in no mood to do it. The only interpretation it could give to this proposal was that it was an attempt on the part of Mr. Roosevelt to centralise monetary control in his hands and as such, it called for the virulent opposition on the part of the moneyed classes. Whether it was a particularly weak moment for Mr. Roosevelt, or whether the opposition was truly much stronger in this case than before, the Administration beat a hasty retreat and the proposal for the creation of a Central Bank is no longer heard of today in America.

This has been the beginning of a lack of confidence on the part of the Administration in further measures of devaluation. To add to this, the partial failure of the refinancing programme and the growing complications in the relations with sterling, which threatens to sink to the old parity of the dollar, it is understandable that the Administration should no longer be able to command the same robust confidence in the value of a low dollar to American economy as before.

It must also be said that, apart from the practical difficulties of effecting a further devaluation, the President himself has been losing faith in the virtues of the commodity dollar. The jars and jolts of the coach of Recovery bring out clearly that, however much a rise in prices may be desirable, it cannot do much good, so long as it does not come about in a gradual manner. The value of the gradualness lies in the time it gives for adjustment between the various factors of the national economy. Mr. Roosevelt realised the dangers of sharp rises, only in those cases in which sharp rises followed hectic speculation. He has been firmly set against such

Air Mail Week

speculative tendencies ; and he has put his foot down on speculation, whenever it threatened to take prices to unwarrantable levels. But it is doubtful if he realises that, unless the rise in prices is spread over a period and occurs gradually, there are bound to be maladjustments in the national economy, which will wreck the whole scheme of recovery. During the last one month, that is during the period in which he could not go further on the path of depreciation even if he liked to, he is having a clear appreciation of these points. But he has not given the public any inkling of what he might do in the future. Though at a stage it was reported that even the President had connived at the talk of deflation, which Professor Sprague set afoot, he has not allowed the impression to gain ground that the Administration is done, once and for all, with artificial depreciation of the currency and the exchanges.

In these circumstances one is tempted to hope that the embarassments of the present position will lead the President of the United States to explore the chances of coming to an agreement in regard to the relation between the various currencies. The attitude of the gold standard currencies is, no doubt, a great stumbling block. Their determination to stand by the gold standard seems to have increased in proportion to the fall in their capacity to do so. The conference of the gold bloc countries far from conveying any assurance to the people about the ability of their gold standard currencies to maintain gold has only aggravated public mistrust therein. But there is no reason why the President should be diffident of the capacity of Great Britain and America acting in concert to settle the chaotic state of the international exchanges. For some time, there was reason to think that the differences between the American and the British Governments were being slowly narrowed. At one time, there was even the talk that the exchanges of opinion had been actually made between the two governments. The British Chancellor of the Exchequer, no doubt, contradicted these reports ; but he also expressed his willingness to explore through private talks the chances of an agreement. One could set much hope on this, except that during recent weeks the fall in sterling has occasioned a little friction between America and Great Britain. The American Government has not taken kindly to the approach of the cross rate to the old parity. There have been instances of the American Control interfering, though only indirectly with the value of the dollar in relation to sterling. The silver purchases have proved to be a very handy instrument of depreciating the dollar. Excepting for this note one could start singing the tune of stabilisation.

GREAT BRITAIN

THE COTTON DISPUTE

Negotiations between employees have become a perpetual characteristic of Britain's industrial life. Welsh coal has in this respect stolen a march over several commodities in as much as an eleventh hour agreement was found to be acceptable to both sides in the coal dispute. At the present moment there are at least two industries which are faced with the consequences of a disagreement between employers and employees, namely Railways and the Cotton Industry.

Lack of agreement between the employers and the employed is by no means all the trouble at Manchester. Manchester has suffered a slow diminution of her glories as a result of political and other disturbances spread over a wide surface of the globe. But not the least of her troubles has been ascribed to a lack of co-ordination and solidarity within the industry. More than one reputed authority have adjured the cotton magnates of Manchester to put their house in order. The satisfactory conclusion of the dispute between the employees and the employers at Manchester will certainly go a long way. If it cannot spell "finis" to all Lancashire's woes it will at least lend weight to Lancashire's efforts to recapture her lost glory.

The trend of the negotiations point to the possibility of an agreement being reached very shortly. But the fact that Mr. Ashurst, Secretary of the Employers' Association, who has been a leading light throughout the negotiations, is leaving England for Poland as a member of the Cotton Trades Mission, is an added obstacle. Unless the agreement is reached before Mr. Asurust's departure the prospect will greatly worsen.

The Railway Dispute

The other dispute awaiting a settlement is a long-standing controversy between employers and the employed, in the Railway industry. Repeated efforts have been made in the past to replace the existing National Wages Board and negotiations between the representatives of the four main line companies and the three Railway Unions have been going on for a considerable time. It is believed that the discussions are rapidly converging towards an agreement. The recent improvement in the railway receipts and revenues have lent an added strength to the employee's demand for better terms. But a certain conservatism has marked the attitude of the employers whose memory of the dark days of the railway industry is still vivid. It is likely that the improved prospects will plead successfully on behalf of the employees to bring about an amelioration of their severely curtailed conditions.

The Improvement in Shipping

Those sceptics who look for tangible reasons for the contention that England is definitely on the path of recovery should study the report of Lloyd's on the ship-building activity in Great Britain and Ireland. Merchant-vessels in construction at the end of September last totalled 604,296 tons—an increase of 300,534 tons or 99 per cent. of the tonnage in hand at the end of September 1933. This should effectively silence the critics of the Government's shipping policy. The Government have been recently charged with being unduly generous to the shipping industry. What with the subsidies and other privileges that the Government have extended towards shipping, the industry came to be looked upon as the cinderella industry of Great Britain. It is perhaps hardly to be wondered at that the Government's support of an industry that-forms such an intrinsic part of their political policy should be greatly exaggerated at a time when dark clouds are beginning to appear in the international political horizon. Merchant vessels do not, of course, go far to strengthen the Naval superiority of a nation, but merchant vessels certainly play their part at a time of national crisis and when the move on the part of the Government to increase merchant tonnage coincides with the speeding up of armaments, the whole thing has the aspect of a manouvre of the War Office. Whatever that may be, the improvement in the ship-building activity is certainly gratifying. Of the countries abroad, Japan leads with 149,750 tons while France and Germany follow close at her heels with 120,868 and 120,816 tons respectively. Of the total tonnage in construction in the world, namely 1,311,387, Great Britain accounts for 46.1 per cent.

Air Mail Week.

FRANCE

AFTER THE STORM

One would expect the deaths of M. Barthou and M. Poincare to be followed by a serious political crisis. The Foreign Ministry has fallen vacant. Mr. Albert Sarraut, the Minister of the Interior, has been compelled to resign. The Minister of Justice, M. Cheron, may very soon, be forced to resign as well. Ordinary, a certain amount of party intrigues might be expected in the filling up of these posts; and if the National Ministry had collapsed in the attempt it would not have caused much of a surprise.

Curiously enough, nothing of the kind happened. The Government of Truce still retains its true character with M. Herriot and M. Tardieu as Ministers without portfolios. For the present, confidence in the President still continues unshaken. This is an indication that France has learnt only too fully that she cannot risk any more experiments in politics.

Pessimists will, of course, point out to the Radical Socialists' Meeting to be held on the 25th of this month and remark that we will have to wait till then for the real fate of the Cabinet. It is argued that in case the Radical Socialists carry the day, and if Mr. Herriot, who favours the continuance of the National Ministry, is defeated, a general election will have to follow and this might easily lead to a recurrence of the street fighting which ushered in the Doumergue Government. Such a recurrence might well, it is feared, endanger the franc.

But there is no need to be gloomy over any such possibility. Public opinion has on the whole remained calm, despite the dramatic events of the last three weeks. The Radical Socialist Congress is not so big an event as to cause any serious dislocation of the normal state of affairs. The new Government loan, which was launched some weeks back, has proved a success. There are three maturities to face representing a total of 7,500 million francs; including 6,000 million francs for the 5 per cent. 1924 Bonds, 1,000 million francs for the American French cities, and nearly 500 million francs for the Credit National bonds. On the 12th 7,000 million francs had already been subscribed and this promises to place the Treasury beyond any danger for some months to come. After meeting the October-end maturities, it is expected cash in hand will amount to 1,500/2,000 million francs.

This success of the loans has a special significance. The market may attribute the success first to the short tenure of the bonds and secondly, to the high yield. Bankers report that subscriptions were heavy in both town and country; and the Treasury observe that there has been no slowing down in the subscriptions following the news of the Marseilles tragedy. That financial circles are little influenced by the tragic events is sufficient proof of the confidence that the National Ministry now enjoys.

We may also point to the reduction in the Treasury bill discounts. The table below shows the progressive reduction in the interest rates on the various dates:

Treasury Bonds.	March 7 1934.	May 19 1934.	May 30 1934.	Oct. 8 1934.
1 mohth ...	2%	1½%	1%	½%
1 to 2 months ...	2½%	2%	1½%	1%
2 to 3 months ...	3%	2½%	2%	1½%
3 months to 1 year ...	3½%	3%	2¾%	2⅜%
1 to 2 years ...	4%	3½%	3%	3%

For many weeks past the Bank of France has showed a steady increase in its stock of gold which has risen by 8,300 million francs since the beginning of March. This progressive reduction in interest rates is a clear proof of the sound position of the French Treasury which has markedly improved since the February riots.

JAPAN

FOREIGN TRADE POLICY

The Foreign Office have announced that they will be convening shortly a Trade Commission for the consideration of some of the major problems that may arise in connection with Japan's foreign trade. The Commission will consist of officials of the Department, so that they will form into a sort of permanent Advisory Committee attached to the Foreign Office. It may, therefore, be interesting to review some of the problems that are, in all probability, to be tackled by this Trade Commission.

It is well known that Japan's link with the world as an export manufacturing country is only recent. She has made rapid strides in her industries; and the chief feature of world trade during the last three to four years is the extraordinary increase in the export of Japanese goods. Whether it is due to the depreciation of the yen, or to the high degree of efficiency in organisation and cheapness of labour the flooding of the world markets with Japanese goods cannot be taken kindly to by the importing countries. Countries like Great Britain reputed to be followers of the Free Trade Policy, long before any other country thought of welcoming the principle, have also begun to throw their pet theories to the winds.

There is also a new feature in Japan's trade. In this case of countries, Japan is importing three times as much as from them as she exports to them; but the mere cheapness of her goods is considered sufficient reason for imposing restrictions. With Australia, for instance, Japan's trade balance is definitely adverse. The Osaka Journal gives the figures of Japan's trade with Australia during the last three years as follows:—

	Exports from Japan (in 1000)	Imports into Japan (in 1000)
1932 ...	36,895	134,277
1933 ...	51,416	204,586
1934 (Up to end of July) ...	33,529	131,225

Japan has the weapon of retaliation ready at hand, just like other nations and can insist on her customers accepting goods equivalent to what she gets from them: but she cannot very well utilise this weapon. Japan must have wool, cotton, silk-pulp and steel for her most important manufactures. With the help of Manchukao she may be more self-sufficient in the near future. But for the present she has to rely only on her abilities for negotiations.

Mr. Latham from Australia has already spent a month in Japan and has had first hand information about the economic position. Now the Japanese Government are anxious to return the visit and conclude some trade agreement mutually advantageous. According to the *Mainichi* the Commercial Affairs Bureau of the Foreign Office has practically finished the drafting of the proposals to be brought before the negotiations expected to be opened shortly with the Australian Government. These proposals have been drawn up on the basis of decisions reached at the Conferences which have been held at the Foreign Office between the various Commerce and Finance Departments. She has already sent one delegation to the Netherland Indies. Another treaty with the Portugese Government may become a reality shortly. According to a report, received by the Foreign Office from Mr. Kumabe, the Japanese Charge d' Affairs in Lisbon, negotiations are to be commenced by the middle of this month. It is therefore expected that the New Commission which will be formed will exploit further avenues of securing trading rights for Japanese goods.

IMPERIAL BANK OF INDIA

THE NEW ACT AND THE PROSPECTS

BY A. D. SHROFF

The Imperial Bank of India was established under the Imperial Bank of India Act 1920, by the amalgamation of the Banks of Bengal, Madras and Bombay. Since its inauguration the Imperial Bank has acted as a semi-central Bank for India, one of its main functions being to act as bankers to the Government of India. The position of the Bank, *vis-a-vis* the Government, naturally called for various restrictions on its operations, one important restriction being that the Bank under the 1920 Act cannot engage itself in buying and selling foreign currencies. The Bank's powers were also restricted in regard to its lending business, so that it could not come into direct competition with the Exchange Banks, or with the Indian Joint Stock Banks.

His Majesty's Government decided in 1932, at one of the Indian Round Table Conferences, that the establishment and successful operation of the Reserve Bank for India would be a condition precedent to the inauguration of constitutional reforms in India, particularly the ushering into existence of an All-India Federation. In pursuance of that decision an Act was passed last year called "The Reserve Bank Act" which provides for the creation of a full-fledged Central Bank for India, which would co-ordinate control of currency and credit. It is obvious that, when the Reserve Bank comes into operation, the Imperial Bank of India cannot continue to operate as at present, as the Reserve Bank will then act as bankers to the Government of India. It is, however, provided in the new Act, that the Reserve Bank shall appoint the Imperial Bank as its sole agents throughout India, and that the Reserve Bank will not open offices at more than five important places. It may be mentioned that the Imperial Bank of India to-day maintains some 160 banking offices throughout the country, a number of which have not proved remunerative. These branches were opened by the Imperial Bank of India in fulfilment of the undertaking given to the Government at the time of its inauguration, the underlying purpose being to provide increased banking facilities to the country.

In compensation, therefore, for the loss of the privilege of acting as bankers to the Government of India and for the continued maintenance of all the existing offices, an agreement will be entered into between the Imperial Bank and the Reserve Bank, by virtue of which the former will get a graduated scale of annual payments for a period of twenty years. The Imperial Bank of India Act of 1920 has also been consequently amended to remove the various restrictions on its operations, thus widening the scope for augmenting its earnings. The most important amendment is the permission granted under the Act to deal in foreign exchanges. This business has hitherto been a close preserve of the few Exchange Banks operating in India. What with the large number of Banking offices that the Imperial Bank will continue to maintain and what with the very extensive and valuable business connections which have been built up by the Bank during its existence of 14 years, it is reasonable to assume that the Imperial Bank will come to command a large share of the exchange business of the country. The removal of restrictions on its lending powers will also make it possible for the Bank to employ its funds in more remunerative channels than hitherto. As a matter of fact, in well-informed circles it is taken for granted that at least for a number of years to come the Imperial Bank of India will continue to occupy the foremost place in the Indian banking world.

The authorised and subscribed capital of the Imperial Bank is Rs. 11.25 crores and the paid up capital is Rs. 5.625 crores. There are two kinds of shares, the fully-paid shares are of the face value of Rs. 500, and the contributory shares are of the face value of Rs. 500 of which only Rs. 125 are paid up. The fully-paid shares are quoted at present at Rs. 1,455 and the contributory are quoted at Rs. 359. In the balance sheet dated 30th June 1934 the Reserve has been shown at Rs. 5.275 crores. It is, however, a matter of common knowledge that the Bank has accumulated a very substantial amount of secret reserves running into a good few crores. The Bank has throughout its existence been known to have been managed on very conservative and sound lines and has acquired a particularly high credit and standing since its management was placed in the able hands of Sir Osborne Smith in 1928.

Until 1931 the Bank paid a dividend of 16 per cent. tax free on its paid-up capital for a number of years. Owing to the continued trade depression, political unrest and the unprecedented drop in the value of Government securities, as a result of the Congress threat of repudiation of public debts, the Bank was obliged, as a matter of caution to reduce the dividend in that year to 12 per cent. per annum, tax free. Since that period very energetic measures of retrenchment have been undertaken with a resultant saving of Rs. 20 lacs in its anual expenditure. The profits earned by the Bank in 1933 and in the half year ended 30th June 1934 would have more than justified the restoration of the dividend to the former level of 16 per cent. tax free. The Directors, however, have decided to pursue the present conservative policy until times ahead can be seen with greater clarity.

Even on the basis of 12 per cent. tax free at the present prices both the fully-paid and the contributory shares show a return of about 4¼ per cent. tax free, which can be considered very attactive for a bank of the position and strength of the Imperial Bank of India.

SOUTH INDIA

CEYLON ON THE WAR-PATH

(From our Correspondent).

Madras, Oct. 30.

The meeting of the Local Legislative Council always affords an opportunity of taking a bird's eye view of the political and economical situation of the province. His Excellency The Governor, in opening the Session, usually attempts a resumé of recent events, and a forecast, in some respects, of the time ahead. His Excellency Sir George Stanley evinced the attitude in which one in effect says "Now that I have seen you through your worst, you can go forward to your best." Sir George naturally claims credit for having taken the Budget through one of the worst periods, when the Budget had to be balanced, not only in face of an actual shrinkage of revenue, but also a deliberate remission necessitated by the changes in agricultural prices. To have remitted nearly a crore of rupees on account of land revenue and to have kept the financial position well in hand is an achievement which those responsible for it will have to be very much more than human not to exaggerate. And on the eve of his retirement it were alike ungenerous and unnecessary to remind Sir George of the other features of his regime.

While the Government naturally try to show off the bright side, it is the proper function of the Legislature to turn over the other side of the shield. The Session is not advanced enough to afford opportunities to the popular representatives to push this and that grievance of the people to the fore. But question time was well utilised to stress the needs of the people and the lines on which the Government might afford them relief. If one gets over the feeling that, unless Government Members are heckled and cornered, interpellations are a waste of time, one has reason to feel gratified that the Members have brought most important questions of the hour to the notice of the Government. The questions related to the visit to Madras of the Statistician of the Imperial Council of Agricultural Research, the imports of rice, particularly from Siam, Ceylon's duties on the imports of vegetables, ghee and eggs from India, questions of re-settlement and the disposal of the towers used in the Mettur dam for mixing cement. There were, of course, a few Members who seem to think that their constituencies and the country at large are best served by questions relating to appointments under the Government. It is a pity that even the complete victory over of the supposed monopolists of Government office should not have removed this depressing trait of local politics. But if these instances are put out of mind, the Legislators may be congratulated on the judgment they have shown in choosing the topics of public importance.

More than that, it is at the moment difficult to claim; for interpellations generally lead to a stalemate, ending either in a plea for notice or a vague statement that the matter is under consideration. The Members succeeded in indicating clearly the lines on which the Government should proceed—or should have proceeded—if they mean to serve the public well. It was elicited in the first place, that there was little or no touch between the Government of Madras and Statistician to the Imperial Council of Agricultural Research, while the latter visited the city, though his object was to collect statistics in regard to so vital a commodity as rice. It is strange that the Government of Madras should not have thought of even asking for the report of the Statistician. The same attitude of slothful indifference was shown in regard to the question of the imports for foreign rice. To the question regarding the amount of actual imports into Madras, the reply was, of course, prompt, giving the figures as at September 30, 1934, as below:—

			Tons.
Siam	...	...	157,352
Indo-China	...	...	27,872
Ceylon	...	...	1
Japan	...	...	750
Straits	...	...	7
	Total	...	185,982

But, as for the action taken by the Government of Madras, the attitude of the Government of India and the possibilities of the latter coming to the aid of this Province, the Hon'ble Member would not be moved to say anything definite. All that the Members wanted to know was whether on the basis of their replies, there was any possibility of the Central Government taking action in this behalf. And the helpful answer was that the Hon'ble Member could not recollect having received a reply and that he would not hazard a conjecture. The answers of these two questions taken together show that the Government have still an inadequate recognition of the necessity of improving the position of the rice-growers. For otherwise, they would have by this time acquainted themselves with the activities of the Statistician while he was here and given the Government of India no peace till a definite indication of the attitude was afforded.

Another important question raised in the interpellations refers to the imposition of import duties on India's exports of vegetables, ghee and eggs to the Southern Island. Mr. F. Birley wanted to know whether the Government of India have been approached with a view to prompt steps being taken to protest against the action of the Ceylon Government. The reply was in the affirmative. But when it was asked what steps the Government proposed to take, the answer naturally was that it was a matter for the Government of India to decide and, so far as the Local Government are concerned, they could do no more than bring the matter to the attention of the Central Government. That the Local Government should revel in handy excuses of this kind for inaction, both mental and physical, is a matter not less for surprise than sorrow. The Madras Government know only too well that the question of our trade relations with Ceylon cannot be postponed for long. For Ceylon is gravitating visibly to an unreasoning truculence towards India. Immigrants to that Island from India know well of the absence of cordiality in relations between Indian and Ceylonese; and, strange to say, the latter are getting a superiority complex which will, before long, get a rude shock. For no understandable reason, Ceylon has been on the war-path. She has imposed galling restrictions on Indian emigrants. She has dumped cocoanuts and ruined a whole class of growers in South India. And when the latter demanded protection, they were told by the Central Government that the Government of India will have to consider the dangers of Ceylonese retaliation. And now Ceylon has pulled the ground from under the Government by imposing duties on Indian imports. The recent Cocoanut Bill also provides various helps to the exports. This might bring out more clearly the character of Ceylonese imports as dumping. It is important to know that the eggs which are exported from India, particularly, Cochin, to Ceylon are both better in quality and cheaper in price and that if the new Legislation comes into effect Cochin will be hit very hard. In the face of such unprovoked aggression the Government of Madras are singularly undisturbed. It is up to them to insist that the Government of India either take up the whole question of our trade relations wih Ceylon or make it clear to the little Island to the South that India will not be dismayed by the thought of an economic war with her.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, October 30.

New Delhi has been closely following the developments in the Congress and the alignments of parties are scanned with the utmost vigilance. The exit of Mahatma Gandhi has been commented upon very diffently in different circles. There is an under current of feeling even in official circles that the Mahatma would not have chosen this path, unless he was sure to establish himself more firmly than ever as the head of the Congress. Secret reports will, therefore, continue to come in from Wardha, where the Mahatma has established his headquarters. His immediate programme will, therefore, be of immense interest.

* * *

The cancellation at the eleventh hour of his visit to Delhi by Babu Rajendra Prasad, the Congress President, has upset the elaborate programme that was being arranged by the local leaders under the leadership of Mr. Asaf Ali. Mr. Asaf Ali had naturally banked a great deal on the Congress President himself addressing the Delhi voters on his behalf. But the asthmatic attack of Mr. Rajendra Prasad, after the severe strain of the Congress session, has deprived Mr. Asaf Ali of this invaluable help and the disappointment must have been very keen, indeed. But reports from several parts of Delhi and New Delhi are however highly encouraging to the Congress candidate. Even Haji Rashid Ahmad is not such a vehement opponent in the in the columns of *The Statesman* to Mr. Asaf Ali, as he was indeed sometime ago.

* * *

So far as the Government of India is concerned, it is getting on with its programme of publishing the Joint Parliamentary Committee's report, undisturbed by the threat of the Congressmen to reject the White Paper Scheme and the J. P. C. Report. The Reforms Office here, under the guidance of Mr. Lewis, is in frequent touch with Whitehall for the simultaneous publication of the Report.

* * *

A trusty sixth sense tells me that the Report will be found to be divided into three sections.

* * *

The Assembly Department is closely scanning the election returns and as soon as these are complete, will try to form an idea of the probable nature, number and strength of the various parties. The worries of wire-pulling are not yet. At the moment the Department is worried about its chief. Will Sir Shanmukham be returned? Recent messages from Bombay, propagandist as they are, are not altogether without substance. The Assembly Department, unlike other departments of the Government, finds its leader changed every two or three years. It is felt that, if Sir Shanmukham had not gone into raptures over the Ottawa Pact in his Madras speeches, his chances would have been much less gloomy than they appear now.

* * *

If he is returned, then, of course, the Government will back him for the Presidential seat. But what will the Congress do? Will they set up a rival candidate? If so, will he be a Muslim? And what will the other parties do? They will probably set up their own candidate. Thus, it may be a triangular contest, in which case Sir Shanmukham Chetty will stand a better chance than in a straight fight with a Swarajist. Official circles, here, would certainly welcome the return of Sir Shanmukham Chetty, not only to the Assembly, but to the Presidential Chair.

* * *

The motive is not difficult to understand. A President who is not inimical to Government may do a lot to save them from the Congress fusillade.

* * *

The Home Member, will have always to bear the burnt of it. But others, too, will have to face the charge, Sir Joseph Bhore with his last Railway Budget, and Sir James Grigg with his first general budget. As for Sir Henry Craik he is, I hear, absorbed in the study of Congress politics; when he faces the Opposition in the Assembly in January, he will be found to be more sure of his ground, and better able to hold it than when he faced the incomparably weaker force at Simla led by Sir Abdur Rahim and his colleagues. As for Sir Joseph Bhore, he like the Railway Board, is rather buoyed up with the appreciable increases in the railway earnings, which, unless some catastrophe like the earthquake were to occur, will surely lead to a balanced budget, without any more raids on the sinking funds and perhaps with the prospect of at least some contribution to the general revenues. By the time Sir Joseph Bhore has seen his budget through, the Congress fury might, perhaps, have spent itself out, largely. And Sir James Grigg will benefit by it.

* * *

At present Sir James Grigg's department is busy with the statistical returns relating to the budget. Dr. Meek, the Director-General of Commercial Intelligence, is having a heavy time. It is not known when Dr. Meek will leave India to join his new appointment as Trade Commissioner in London. It was anticipated sometime ago that he might stay on until the negotiations with the Italian Trade Delegation were taken in hand and concluded. But the Italian Delegation has not arrived and it is not known when it will arrive or whether it will be arriving at all. In these circumstances, there is some doubt felt as to the date of the departure of Dr. Meek. The question of his successor, at the headship of the Department of Commercial Intelligence, has not been decided yet.

* * *

I understand that, when His Highness the Maharaja of Kapurthala returns to India, the agitation in his State will considerably abate, because in the present stage of communal and other feelings amongst his subjects, his presence itself will be a great soothing factor. There has been considerable agitation against his Dewan, which, I hope, will then subside. At the same time, it is clear from the proceedings of the Conference just concluded at Phagwara that Sir Abdur Hamid will have to be replaced in the interests of the stable administration of the State. It is to be sincerely hoped that he will not be an Englishman as has been the case in several other Indian states, where there had been troubles.

* * *

Perhaps, the Maharaja will spend a few days with Lord Willingdon in New Delhi before going to Kapurthala. The occasion will be sought to appraise His Highness of the exact position in the State as viewed by the Political Department. The Maharaja has many officers in the Political Department as his personal friends; and they will surely help him to meet the trouble that has been witnessed in the State during his absence for so many months.

CALCUTTA

MOTOR SHOW AT OLYMPIA

CONSTRUCTION TWO YEARS AHEAD OF THE TIME

(FROM OUR SPECIAL REPRESENTATIVE)

BY AIR MAIL

Though the present Motor Show at Olympia is the twenty-eighth of the series organised by the Society of Motor Manufacturers and Traders, there is no diminution of interest in, or enthusiasm for, the world's largest one industry exhibition; and this in-spite of the exclusion of Commercial vehicles. In an industrial exhibition one generally looks for an improvement in technique. But a feature of the Show this year is an indication of better international trade, judging by the number of foreign exhibitors. The progress in design has been on the lines of consolidation, with a few notable developments, *e.g.*, independent springing, front wheel drive, etc. When Shakespeare wrote "The Spirit of the time shall teach me speed" he did not dream that the twentieth century Motor trade would act up to it. It is interesting to note how this industry has suddenly grown alive to the poet's prophecy, not only in the physical time and space aspect, but also in every conceivable direction, with "Safety first and Automaticism" as the keynotes. From an inspection, it is evident that the foreign car manufacturers have displayed great enterprising spirit in their latest models, which they claim is two years ahead of the time.

The chassis has been greatly strengthened and has been given the right place of importance in the design of the car. A very interesting development is the all-welded box section frame of Riley. This frame, (in the words of a spectator, a cheeky one) though very unconventional, is certainly a good strong job. In the majority of British cars of 10 h.p. or more, cross bracing has become a typical feature, and it certainly adds to a car's strength and power of smooth running.

The suspension of engines and power units has made still further progress, and some form of flexible mounting designed to decrease to the minimum any vibration or rattle from being transferred to the coach work, is incorporated in every make of car. This will be appreciated.

The springing of cars has been greatly improved with greater comfort in riding and better road-holding qualities. The two popular British car manufacturers, namely the Vauxhall Motor Company and Singer Motor Company have introduced front wheel springing, and the demonstration model of the latter firm at the Show is very interesting. Both new forms of springing are considered to be very efficient on the road, and it is safe to predict this as the future method of springing for all cars. These inventions are attracting a lot of attraction.

No radical change has been made in the power units, with the solitary exception of Lanchestor "18", a product of the Daimler Motor Co., Ltd., which has a power unit of a revolutionary design with the head and the body of the cylinders in one piece. The four-cylinder power unit seems to hold its own in the light car class, and the British car manufacturers have rightly specialised in this class to meet the demands of the home motoring public. The six cylinder power unit has not shown any appreciable increase ; but it continues to hold its place among the motoring public. Side valves are popular as before, on the family models, while the power units of sports cars have not deviated from the overhead valve-design.

The transmission system has been consolidated by incorporating a four-speed gear-box with syncromesh gears in all forward speeds, and automotised by the incorporation of either a pre-selective clutch-less gear change, or a flexible hydraulic coupling in the system, as in the case of Singer cars. The Singer Motor Car Co., Ltd., is responsible for a very progressive step in this direction by offering the "Fluidrive" to the motoring public in their cars at the low price of £190.

The two cars, among others, arresting one's attention at the Show are the Citroen Super Modern Twelve and the Triumph "Dolomite." The Citroen car claims to be two years ahead of the time. In its construction are incorporated a chassis-less body, front wheel drive, a separate bore power unit, independent torsion bar-springing, and a gear lever on the dash broad. This firm shows great enterprise in pricing the car at £250.

Another attractive model is the Triumph "Dolomite," an 8-cylinder supercharged car of 1200 c.c. with a guaranteed performance of 100 miles an hour in top gear. In the construction of the power unit has been incorporated the most up-to-date refinements and developments as a perfect engineering job worthy of the reputation of this great firm of manufacturers.

The coachwork section is as interesting as usual, with an universal tendency towards the stream-lining in some form or other. The foreign coach-buildings have taken rapid strides in evolving some of their stream-line models; but the British coachbuilder, while attempting to reduce wind resistance to a minimum, has not shocked the motoring public with rude overthrow of what is familiar.

The Show this year is devoid of any indication of stagnation in design, and in fact utterly refutes those who have said that the car of to-day is the last word in construction. Improvement in design and ultility devices, which are the joy of motorists, are what strikes one even on a cursory glance.

THE WORLD UNEMPLOYMENT SITUATION

The quarterly statistics of employment and unemployment which the International Labour Office has issued for the summer of 1934, show that on the whole unemployment has diminished as compared with the corresponding figures for 1933, but this improvement is less than that shown in the tables published three months ago which gave the figures for the first quarters of 1934 and 1933.

Three months ago, comparison with the previous year showed an increase of unemployment in Bulgaria, France, the Irish Free State, Poland and Portugal. The figures now published give the same result for those countries and also for Belgium, Czechoslovakia, the Netherlands and Spain. In Switzerland the unemployment insurance statistics show an improvement, but those of the employment exchanges show an increase in unemployment. In most of the other countries the improvement as compared with last year is less marked than it was in the spring. Sweden is the only European country where the situation has continued to improve.

The employment statistics give on the whole a more favourable impression. Most of the indices available show an improvement as compared with last year, and in Estonia, Japan and Sweden the improvement is more marked than three months ago. In Italy the summer figures show a slight increase as compared with a slight decrease in the spring. The reverse is the case in Czechoslovakia, while in France the reduction in employment is more marked than it was three months ago.

Once more it should be remembered that the comparison of the situation in the different countries should not be pushed further than this. The figures provide the basis for comparing tendencies, but not for any statistical comparison of the extent of employment or unemployment in the different countries. The figures are arrived at by methods which differ from one country to another, and those given for certain countries are so far from expressing the real situation that they cannot be regarded as anything more than symptomatic.

It is with such reservations that the following figures should be read, collected as they are from various sources: compulsory unemployment insurance, voluntary unemployment insurance, trade union statistics from employment exchanges, etc.

STATISTICS BASED ON COMPULSORY UNEMPLOYMENT INSURANCE

Germany: 2,398,000 unemployed (13%) in September, 1934, instead of 4,124,288 (22.3%) in September, 1934 and 2,525,000 (13.6%) in June, 1934.

Austria: 248,066 unemployed (23.4%) in September, 1934, instead of 291,244 (27.5%) in September, 1933 and 273.576 (25.8%) in June, 1934.

Great Britain and Northern Ireland: 2,135,155 unemployed (wholly and "temporarily stopped") (16.6%) in September, 1934, instead of 2,458,744 (19.1%) in September, 1933 and 2,097,251 (16.3%) in May, 1934.

STATISTICS BASED ON VOLUNTARY UNEMPLOYMENT INSURANCE

Belgium: 167,979 unemployed (17.4%) in August, 1934, instead of 142,199 (13.7%) in August, 1933 and 182,561 (18.8%) in April, 1934.

Denmark: 59,989 unemployed (16.1%) in September, 1934, instead of 72,559 (21.4%) in September, 1933 and 62,782 (17.4%) in June, 1934.

Netherlands: 148,903 unemployed (30.2%) in September, 1934, instead of 152,486 (29.0%) in September, 1933 and 143,423 (28.7%) in June, 1934.

Switzerland: 63,764 unemployed (wholly and "temporarily stopped") (11.9%) in July, 1934, instead of 81,389 (15.9%) in July, 1933 and 91,120 (17.0%) in April, 1934.

Czechoslovakia: 224,933 unemployed (15.9% in August, 1934, instead of 226,843 (15.1%) in August, 1933 and 250,629 (17.8%) in May, 1934.

RETURNS FROM TRADE UNIONS

Australia: 88,210 unemployed (20.9%) in June, 1934, instead of 106, 652 (25.7%) in June, 1933 and 92,297 (21.9%) in March, 1934.

Canada: 28,600 unemployed (17.9%) in August, 1934, instead of 31,131 (21.2%) in August, 1933 and 28,840 (19.1%) in May, 1934.

Norway: 12,934 unemployed (24.7%) in August, 1934, instead of 12,995 (26%) in August, 1933 and 18,454 (36.6%) in April, 1934.

Sweden: 52,618 unemployed (12.5%) in August, 1934, instead of 83.771 (19.8%) in August, 1933 and 85,857 (20.2%) in May, 1934.

STATISTICS OF EMPLOYMENT EXCHANGES OR OTHER ESTIMATES

Germany: 2,955,204 unemployed in August, 1934, instead of 4,790,806 in August, 1933, and 3,394,327 in May, 1934.

Austria: 338,323 unemployed in August, 1934, instead of 375,262 in August, 1933 and 375,733 in May, 1934.

Bulgaria: 33,129 unemployed in July, 1934, instead of 23,249 in July, 1933 and 36,479 in May, 1934.

Chile: 28,040 unemployed in July, 1934, instead of 66,022 in July, 1933 and 31,459 in May, 1934.

Denmark: 75,208 unemployed in September, 1934, instead of 85,222 in September, 1933 and 77,322 in June, 1934.

Danzig: 16,941 unemployed in September, 1934, instead of 26,400 in September, 1933 and 18,462 in June, 1934.

Spain: 320,907 unemployed in August, 1934, instead of 285,898 in August, 1933.

Estonia: 852 unemployed in August, 1934, instead of 1,580 in August, 1933 and 3,530 in May, 1934.

United States: 10,772,000 unemployed in August, 1934, instead of 11,793,000 in August, 1933 and 10,616,000 in May, 1934.

Finland: 11,041 unemployed in September, 1934, instead of 22,646 in September, 1933 and 23,695 in June, 1934.

France: 357,672 unemployed in September, 1934, instead of 263,602 in September, 1933 and 352,312 in June, 1934.

Great Britain: 2,136,578 unemployed in September, 1934, instead of 2,411,137 in September, 1933.

Hungary: 45,486 unemployed in August, 1934, instead of 52,351 in August, 1933 and 52,575 in May, 1934.

Irish Free State: 98,252 unemployed in September, 1934, instead of 55,590 in September, 1933 and 94,420 in June, 1934.

Italy: 866,570 unemployed in September, 1934, instead of 88,560 in September, 1933 and 995,548 in May, 1934.

Japan: 381,114 unemployed in April, 1934, instead of 414,392 in April, 1933 and 390,243 in February, 1934.

Latvia: 1,019 unemployed in July, 1934, instead of 3,769 in July, 1933 and 7,265 in May, 1934.

Norway: 27,210 unemployed in September, 1934, instead of 27,597 in September, 1933 and 29,861 in June, 1934.

New Zealand: 49,931 in August, 1934, instead of 57,169 in August, 1933 and 44,874 in May, 1934.

Netherlands: 297,744 unemployed in August, 1934, instead of 280,237 in August, 1933 and 309,909 in May, 1934.

Poland: 295,149 unemployed in August, 1934, instead of 215,017 in August, 1933 and 358,056 in May, 1934.

Portugal: 30,037 unemployed in May, 1934, instead of 28,785 in May, 1933, and 29,048 in March. 1934.

Saar: 32,055 unemployed in September, 1934, instead of 34,840 in September, 1933 and 32,797 in June, 1934.

Sweden: 65,135 unemployed in September, 1934, instead of 108,769 in September, 1933 and 89,660 in June, 1934.

Switzerland: 52,147 unemployed in September, 1934, instead of 50,207 in September, 1933 and 44,087 in June, 1934.

Czechoslovakia: 572,366 unemployed in September, 1934, instead of 625,836 in September, 1933 and 619,487 in June, 1934.

Yugoslavia: 9,551 unemployed in August, 1934, instead of 11,710 in August, 1933 and 21,077 in April, 1934.

INDICES OF PERSONS RECORDED AS IN EMPLOYMENT

(BASE: 1929=100)

Great Britain: 99.5 in September, 1934, instead of 95.9 in September, 1933.

Latvia: 97.9 in July, 1934, instead of 89.5 in July, 1933.

Czechoslovakia: 80.3 in August, 1934, instead of 80.5 in August, 1933.

Canada: 83.8 in August, 1934, instead of 73.1 in August, 1933.

United States: 77.4 in July, 1934, instead of 63.8 in July, 1933.

Estonia: 105.3 in July, 1934, instead of 89.0 in July, 1933.

France: (Base 1930=100): 78.4 in August, 1934, instead of 89.0 in August, 1933.

Italy: 70.1 in July, 1934, instead of 69.2 in July, 1933.

Japan: 99.9 in June, 1934, instead of 89.5 in June, 1933.

Poland: 68.8 in August, 1934, instead of 64.2 in August, 1933.

Union of South Africa: 101.1 in June, 1934, instead of 89.7 in June, 1933.

Sweden: 93.3 in August, 1934, instead of 84.6 in August, 1933.

Switzerland: 74.4 in July, 1934, instead of 73.1 in July, 1933.

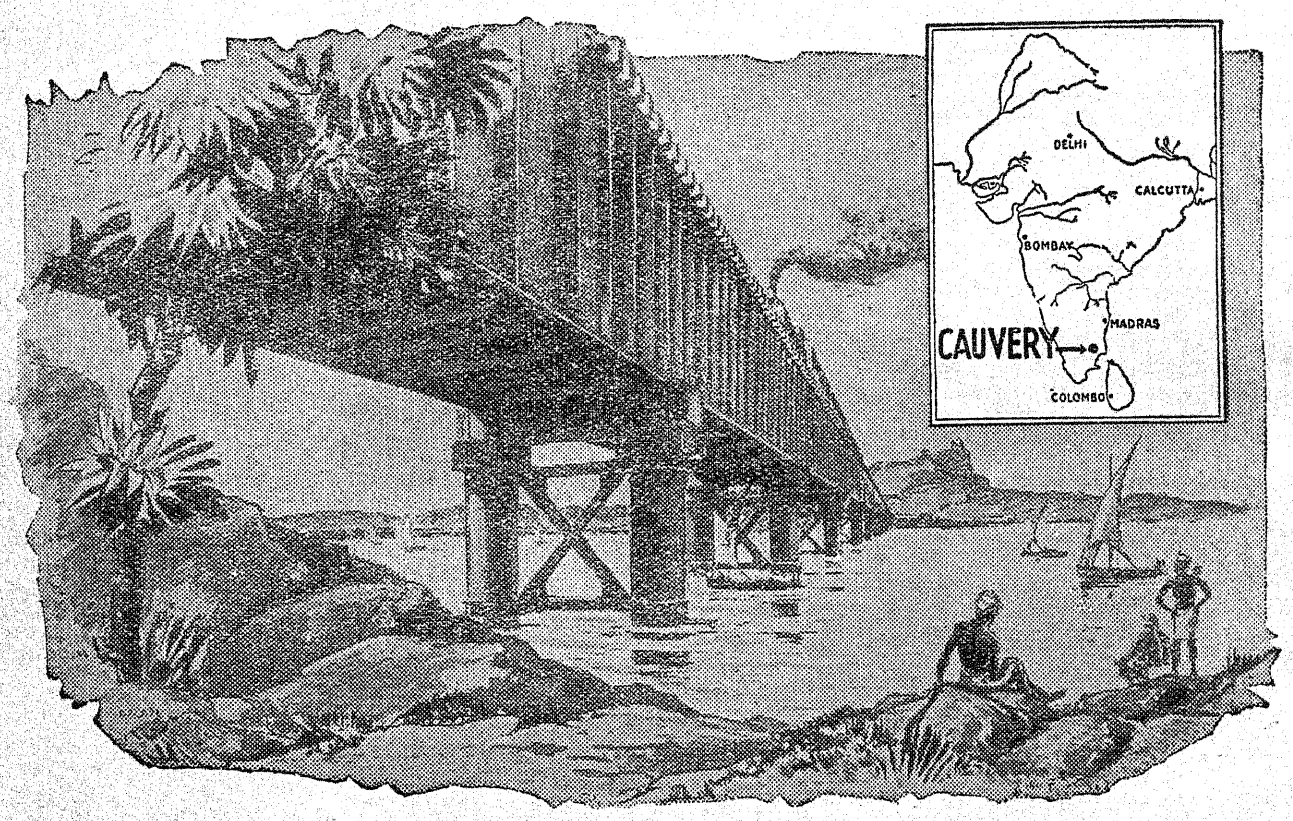
ABSOLUTE NUMBERS

Germany: 15,533,000 in August, 1934, instead of 13,435,581 in August, 1933.

Great Britain: 10,171,000 in September, 1934, instead of 9,796,000 in September, 1933.

Latvia: 167,077 in July, 1934, instead of 152,093 in July, 1933.

Czechoslovakia: 2,012,018 in August, 1934, instead of 2,018,054 in August, 1933.



SPEED

The Cauvery River at Trichinopoly is $2\frac{1}{4}$ times as wide as the Thames at London Bridge.

Braithwaites bridged the river and opened the line to traffic in six months.

This feat was made possible by the Braithwaite organisation backed by their patented system by which they finished the foundations in five weeks. Seven other similar bridges having an aggregate length of two miles were completed by the same methods in 13 months of continuous work.

JUTE AND JUTE GOODS

JUTE

Calcutta, Nov. 1.

During the week under review raw jute material ruled steady but quiet with small day to day fluctuations. The highest and lowest quotations for December futures were Rs. 27-8 and Rs. 26-12 per bale.

Small business has been done by Mills in India Jat LR at Rs. 4-10 and XLR at Rs. 3-14 for forward position. Mills this season have bought generally for positions January to June next year, while there have been keen sellers for ready spot goods. For this reason the market has been narrow and the tone steady but quiet.

Business in ready Firsts has been done at Rs. 25-4 per bale with buyers over towards the close, sellers asking annas four more. Lightnings are quoted at Rs. 21.

London market has been responding well below £15. Spinners are not however interested over this level. Poor business for hessians in Dundee and German import restrictions for raw jute have been responsible for poor business in London market.

The arrivals in Calcutta are showing a decline of late and there has been a reserve on the part of mofussil sellers. Total arrivals for the season ending October, 1934, have been 3,751 bales as against 3,484 during the same or 267 bales in excess of last year. Exports on the contrary have been 1,031 of bales for the season ending October, 1934, as against 1,365 of bales for the same period last year or a decrease of 334 bales. It is expected that with the opening of 2½ per cent. of hessians as from November 1, 1934, local mills will be consuming more hessians to that extent. Yet it is feared that consumption by mills abroad will be much more less and will more than offset the increased consumption by local mills.

JUTE MANUFACTURES

Calcutta, Nov. 1.

Conditions in the jute goods market remained more or less unchanged as compared to the previous week and the tone of the market was fully steady. Business in nine porters ready hessians was done up to Rs. 8/14 towards the finish there are sellers at one anna less. Apart from the bear covering report last week there was not much fresh business in the market.

Quotations for 10½ oz. hessians as well as for heavy goods are a bit lower than previous week and the tone is a shade easier.

COTTON AND COTTON GOODS

COTTON

Calcutta, Nov. 1.

There has been very little change in the cotton market during the current week and the quotations are the same as reported last week. New York has likewise remained very stagnant throughout the week, prices ruling were about 12.40 cents. There have been heavy hedge sales, but they have been well absorbed by the trade and there is little likelihood of prices going down on account of selling pressure.

Latest crop and weather accounts indicate that crop prospects in various parts of C. P. and Berar have improved due to continuance of clear weather. The yield of the province is placed at 77 per cent. against 83 at this time last year. Crop Gujerat has been damaged at some centres due to lack of rains. In Kathiawar Cotton plants are withering and hardly 40 per cent. of the crop is expected.

The world consumption of cotton for 1933-34 is placed at 25 million bales as against 24.35 million bales in 1932-33, and 22.48 million bales in 1930-31. The trend of Indian cotton is, however, quite different. The consumption of Indian cotton in 1933-34 is estimated at 4.77 million bales only against 5.86 million bales in 1930-31. Looking to the present cheapness of Indian cotton one naturally thinks that there is a large scope for increased consumption of Indian cotton.

PIECEGOODS

Lucky day sales were of no consequence compared with other years. The demand for Indian mills styles continues brisk with steady rates, Lancashire lines attracting little attention.

In the forward position Lancashire has to its credit enquiries for dhoties, umbrella cloths and printed saries, but the actual turnover has been small owing to the difference between dealers' and replacement costs.

The figures of imports of cotton yarn and piecegoods into British India during August show that while imports of cotton yarn remained stationary at just under 2 million pounds, imports of cotton piecegoods were substantially higher than in the previous month.

Importations of cotton yarn of all descriptions amounted to nearly 2 million lbs. The United Kingdom and Japan increased their shares of the trade by 40,000 lbs. and 100,000 lbs. respectively to 812,000 lbs. and 737,000 lbs., but the sendings of China at 399,000 lbs. showed a drop of 145,000 lbs. compared with the figures for July.

The takings of both single and double grey yarns at 1.1 million lbs. were slightly lower than in July. Of the quantity imported, 651,000 lbs. consisted of single yarns of counts over 50s, as against 496,000 lbs. in July. China nearly doubled her sendings of this type of yarn, her imports for the month amounting to 248,000 lbs. against 125,000 lbs. in the previous month. Imports of bleached yarns dropped from 310,000 lbs. in July to 189,000 lbs. in August owing to decreased sendings of the United Kingdom. Coloured yarn imports amounted to 97,000 lbs. as against 67,000 lbs. in previous month. As regards mercerised yarn, takings for the month at 613,000 lbs. showed an improvement of 132,000 lbs. The vast bulk of the imports consisted of folded yarn. Japan increased her sendings of folded yarns of counts 51s to 80s by 105,000 lbs. to 407,000 lbs. and of counts above 80s by 47,000 lbs. to 185,000 lbs.

The total imports of cotton piecegoods amounted to 77 million yards as compared with 62¼ million yards in the previous month. United Kingdom improved her sendings by 16 million yards to 52½ million yards, while imports from Japan were a million yards lower.

The position of world cotton markets from the point of view of consumption is :—

Cotton Ginning Report

American cotton of the growth of 1934 ginned prior to October 1 totalled 6,748,000 running bales, counting round as half bales states the Bureau of Census, Department of Commerce, in its sixth ginning report of the season.

This compares with 8,606,000 bales last year; 7,311,392 in 1932; 9,496,965 in 1931 and 9,254,968 bales in 1930.

WOOLLENS

Signs of the approaching cold weather stimulated an interest in Japanese woollens, principally rugs, blankets, meltons serges and mufflers. The variety of Japanese fabrics, wholly or partly woollen, has created a growing local demand and the market is at present practically monopolised by these.

In this connection the Government of India passed a resolution on October 20 to instruct the Tariff Board to enquire into the question of granting further protection to the woollen industry.

BULLION

GOLD

Calcutta, Nov., 1.

Slightly easier conditions have prevailed in the gold market and local price has gone down to Rs. 34-12 per tola as against Rs. 35 a week ago. London gold is quoting £6-19-7 per ounce as against £7-1-2½d. a week ago. The heavy stock position in Bombay is slightly relieved by the huge export last week: still stocks are very heavy and sellers are more keen for business.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £191,938,546 on the 10th instant, as compared with £191,909,743 on the previous Wednesday.

About £2,300,000 gold has been dealt with in the open market this week, Keen general buying has kept prices at a considerable premium over the gold exchange parities and this fact coupled with a further weakness in sterling on the 11th brought about a fresh record price—143s. 3d.—on that date.

London—Air Mail Week.

At the outset of the past week, heavy speculative purchases, mainly on account of the Indian Bazaars, found the market bare of supplies and there ensued a sharp rise of 1.1/8d. for cash and 1.3/16d. for forward deliveries bringing quotations to 24½d. and 24.5/8d. Profit taking and some Chinese sales failed to bring about any marked reaction and prices receded only 1/16d. on the next two days.

On the 15th instant was received the news of China's action in raising the export duty to a basic 10% with a further equalising duty adjustable upwards and which is to represent the difference between the exchange rate and the theoretical London silver parity. This stringent check on exports of silver from so large and important a source had the natural effect of raising prices still further and quotations on that date at 24.7/8d. for cash and 25d. for forward delivery were the highest recorded since May, 1929. In spite of heavy re-sales these prices were maintained yesterday but to-day, with heavy profit-taking sales and only poor demand, prices have reacted sharply, falling 1d. to 23.7/8d. and 24d. The fall was the sharper for the incidence of "stop loss" selling orders, and as we write appears overdone.

China's action, referred to above, is the climax to a long series of representations made to the American Government on the subject of the serious effect of their silver purchase policy upon economic conditions in China.

In the Notes which have passed between Mr. Sze, the Chinese Minister in Washington, and Mr. Cordell Hull, Secretary of State, and which are now published, the former points to the discouragement of Chinese exports of commodities due to the sharply rising silver prices and consequent heavy shipments of the white metal, and to the adverse effect on his country's purchasing power. He suggests that for the present America should restrict purchases to silver already in the country. In an earlier Note he had suggested that America should purchase direct from the Nanking Government. To the latter suggestion Mr. Cordell Hull replied that direct inter-governmental negotiations had not been undertaken because of the existence of free markets, but that the U. S. Government would be pleased to discuss at any time the future availability of such markets. In his reply to the former proposal, the Secretary of State reminds the Chinese Government that the silver purchasing programme is "embodied in an Act of Congress which is mandatory as to its general objective upon the executive."

From the above it would appear that the U. S. authorities are not to be deflected from their path of silver purchases and that the most that the U. S. Government is prepared to do is, in the words of Mr. Cordell Hull, "so to arrange the time, the place and the quantity of its purchases as to keep in view the considerations put forward by the Chinese Government in its communications."

The present situation gives rise to some uncertainty; the bull position is exceedingly large and therefore the possibility of temporary reactions, such as occurred to-day, must not be overlooked. Nevertheless, it would seem that higher prices for silver are eventually to be anticipated.

The following were the United Kingdom Imports and Exports of Silver registered from mid-day on the 8th instant to mid-day on the 15th instant:—

SUGAR

Prices running in the Indian markets continue below parity. Bombay reported sales of Whites by European importers for shipment November to March at around 5/6 and 5/7 per cwt. CIF (against our parity of 5/10). Karachi report no special features, and from Calcutta the market is content with present commitments *en route*.

Stocks on the 17 October were estimated at:

	Tons.
Calcutta	5,600
Madras	500
Rangoon	700
Bombay	7,200
Karachi	7,700
Bhavnagar	4,000
Bedibunder	1,300

Reports from Calcutta state that the Indian Sugar Mills Association representing about 80 sugar mills have invited the Government's attention to the imports of Java sugars at continually lower prices, and refer to the previous recommendations of the Tariff Board if sugar declined to a price below Rs. 4 per maund. The idea is to obtain further protective duties.

TEA

Calcutta, Nov. 1.

The general tone of the market was lower.

Commonest kinds both leaf and broken were rather easier, common brokens were about steady, and medium brokens were lower by about 3 pies per lb. Leaf grades, with the exception of any Orange Pekoes with style which were fully steady, declined 3 to 6 pies per lb. All types of Fannings however met an improved demand, and prices for these and for any Broken Orange Pekoe grades with tip were maintained.

There was a good market for all grades with a tendency for prices to advance. Ordinary broken grades were frequently a pie or two per lb. dearer, and any grades with tip and Orange Pekoes with style made improved prices. Dusts, although in good demand, did not always realise former quotations.

The following are particulars of Sale No. 20.

Tea with Export Rights.

TEA EXPORTS

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association.

Quality of tea entered for export to United Kingdom for the first half of October, 1934.

Calcutta—Black 11,933,735 lbs., Green nil; Chittagong —Black 6,539,169 lbs. Green nil.

Quality entered during the corresponding period last year.

Calcutta—Black 10,739,316 lbs., Green nil; Chittagong —Black 6,495,012 lbs., Green nil.

Total from April 1, 1934 to October 13, 1934.

Calcutta—Black 91,025,686 lbs., Green nil; Chittagong —Black 49,098,238 lbs., Green nil. Total 140,123,924 lbs.

Total from April 1, 1933 to October 14, 1933—127,103,179 lbs.

LONDON TEA SALES

INDIAN TEA.

At the London auctions on October 24th, 24,600 packages of Indian tea were submitted for sale.

The market was rather quieter. Common qualities barely maintained their rates, medium kinds were irregular but better sorts, particularly tippy, teas were firm.

The following were the lowest prices fetched during the day's auction :—

	Last auction lb.	To-day's auction lb.
Common Pekoe	10½d.	10½d.
Common Broken Pekoe	10½d.	10½d.
Common Orange Pekoe	10½d.	10½d.
Common B. O. Pekoe	11d.	11d.
Common B. P. Souchong	11d.	10½d.

The following are the value prices :—

Clean Common Pekoe	11⅛d.	11d.
Clean C. B. Pekoe	11⅛d.	11⅛d.
Clean C. O. Pekoe	11⅜d.	11⅛d.
Clean C. B. O. Pekoe	11⅜d.	11⅛d.
Clean C. B. P. Souchong	11d.	11d.

At the London auctions on October 29th, 33,100 packages of Indian tea were submitted for sale.

There was an active demand at generally firm rates.

The following were the lowest prices fetched during the day's auction :—

Common Pekoe last auction 10½d., to-day's auction 10½d. lb.; Common Broken Pekoe last auction 10¾d., to-day's auction 10¾d. lb.; Common Orange Pekoe last auction 10¾d., to-day's auction 10¾d. lb.; Common Broken Orange Pekoe last auction 11d., to-day's auction 11d. lb.; Common Broken Pekoe Souchong last auction 10¾d., to-day's auction 11d. lb.

The following were the value prices :

Clean Common Pekoe last auction 11d., to-day's auction 11d. lb.; Clean Common Broken Pekoe last auction 11⅛d. to-day's auction 11⅛d. lb.; Clean Common Orange Pekoe last auction 11⅜d. to-day's auction 11⅜d. lb.; Clean Common Broken Orange Pekoe last auction 11⅜d., to-day's auction 11⅛d. lb.; Clean Common Broken Pekoe Souchong last auction 11d., to-day's auction 11d. lb.

JAVA TEA

At the London auctions on October 25th, 6,500 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a good general demand with a very strong support for tippy teas which sold at much bigger rates.

The following were the lowest prices fetched during the day's auction :—

	Last auction lb.	To-day's auction lb.
Common Pekoe	9½d.	9d.
Common Broken Pekoe	9d.	8¾d.
Common Orange Pekoe	...	10½d.
Common B. O. Pekoe	9d.	8¾d.
Common B. P. Souchong	9¾d.	9½d.

The following are the value prices :—

Clean Common Pekoe	10⅛d.	10d.
Clean C. B. Pekoe	9⅞d.	9⅞d.
Clean C. O. Pekoe	11⅜d.	11⅛d.
Clean C. B. O. Pekoe	9⅞d.	9⅞d.
Clean C. B. P. Souchong	9¾d.	9¾d.

CEYLON TEA

At the London auctions on October 30th, 21,400 packages of Ceylon tea were submitted for sale.

There was some irregularity. Common qualities were firm and broken sorts with useful coloury liquors, sold well.

The following were the lowest prices fetched during the day's auction :—

Common Pekoe last auction 10⅜d., to-day's auction 10½d. lb.; Common Broken Pekoe last auction 10¾d., to-day's auction 11d. lb.; Common Orange Pekoe last auction 10½d., to-day's auction 10⅝d. lb.; Common Broken Orange Pekoe last auction 11d., to-day's auction 11¼d. lb.

The following were the value prices :—

Clean Common Pekoe last auction 11d., to-day's auction 11d. lb.; Clean Common Broken Pekoe last auction 11⅛d., to-day's auction 11⅛d. lb.; Clean Common Orange Pekoe last auction 11⅛d., to-day's auction 11⅛d. lb.; Clean Common Broken Orange Pekoe last auction 11⅛d., to-day's auction 11⅛d. lb.

NEXT WEEK'S SALE

Indian 52,400 packages of which 51,800 are on Garden Account; Ceylon 21,400 packages of which all are on Garden Account.

7,000 packages of Java and Sumatra tea will be offered for sale next week.

TEA AVERAGE

The following were the average prices of tea in the London market during the week :—

	Last week	This week
Indian Tea (Northern) ...	12.63d.	12.49d.

RAW JUTE EXPORTS

According to the returns received in the Department of Commercial Intelligence and Statistics, the total exports of raw jute from Bengal during September, 1934, amounted to 313,466 bales of 400 lbs. each, of which 281,014 bales were exported from Calcutta and 32,452 bales from Chittagong. The total exports from Bengal in September, 1932 and 1933 were 270,637 and 279,059 bales, respectively, the shipments from Calcutta being 252,879 and 262,898 bales and the remainder from Chittagong.

GOLD EXPORTS

The two-hundred-crore mark in the export of gold from Bombay to Europe and America was reached during the week ended Saturday, October 27, when bar gold worth Rs. 2,19,32,369 was shipped.

The total value of gold exported from Bombay since Great Britain went off the gold standard now amounts to Rs. 200,61,24,209.

TATA IRON AND STEEL COMPANY

POSITION AND PROSPECTS

BY A. D. SHROFF

The Indian Legislative Assembly recently passed an Act extending the grant of protection to the Indian Iron and Steel industry for a further period of seven years, to terminate in 1941. The passing of this Act has assured to the Tata Iron & Steel Company Ltd., which is the principal, if not the only important manufacturer of finished steel in India, for a period of seven years, certain minimum earnings which make the Second Preference shares of this Company the most promising investment in India to-day.

The Tata Iron & Steel Company was established in 1907 with a capitalisation as under:—

	Rs.
6% 1st Pref. shares of the face value of Rs. 150 ...	75,00,000
Ordinary shares of the face value of Rs. 75 ...	2,05,00,000
49,000 Deferred shares of the face value of Rs. 30 ...	15,00,000

The Company expanded its works at Jamshedpore and issued the Second Preference shares of a total amount of Rs. 70,000,000. The money was utilised in introducing the latest process of manufacturing steel to enable the Company to compete with foreign imports of steel. During the War and two years after, the Company passed through a period of unexampled prosperity and distributed large dividends. For example, Rs. 60 per Deferred share was distributed in 1919. With the passing of the post-war boom, and particularly after the diminution in orders for rails, the Company started experiencing difficulties in selling its output in competition with foreign countries. It may be pointed out that the technical organisation of the Tata Steel Works has been so devised that the basic cost of production for the varied output is determined by the quantity of rails produced every year by the Company. The Company's maximum capacity for the production of rails has been estimated at 200,000 tons, compared with its total capacity of 600,000 tons of finished steel.

The Government of India placed very large orders with the Company for rails both during the War and two years after. The exigencies of public finance and the falling off in trade led to the reduction in rail orders, and this brought on a period of considerable difficulty for the Company. In 1923 the Company reached a stage where the Works would have had to be completely closed down, if protection was not given to the industry against foreign imports. The Government of India appointed a Tariff Board to investigate the whole working of the Company, and on its recommendation granted protection to the Company for a period of three years. This protection assisted the Company in finding its feet again, and, soon after, the forcing up of the value of the rupee from 1/4d. to 1/6d. neutralised to a considerable extent the effect of protective duties. In 1927 a fresh Tariff Board enquiry was ordered by the Government of India, on the recommendations of which the industry was granted higher protection for a period of seven years.

Unfortunately for the Company, labour troubles started soon after 1927, and the Company had to face a prolonged strike which cost them a loss of nearly 2,50,00,000 rupees. After 1929 the Company recovered from the effects of the prolonged strike and has come to enjoy during the past eighteen months a period of renewed prosperity and strength. For the last eighteen months the Company has been working at its maximum capacity of 600,000 tons a year. Increasing rail orders are being placed by the Government with the Company, and as a result of the Supplementary Agreement at Ottawa, with the British manufacturers of galvanised sheets, the Company was enabled to sell its surplus pig iron in the British market. On an average, the Company has now been making Rs. 22,00,000 per month. The protection granted in 1927 expired on 31st March, 1934, a date when another Tariff Board was investigating the position of the Company, and had not yet finished its labours. The protective duties have been extended up to 31st October 1934.

The remarkable improvement in the position of the Company has been evidenced by the fact that in submitting its case to the Tariff Board for the extension of protection last year, the Company, of its own accord, admitted that it could now dispense with a part of the high protective duties the industry had enjoyed during the last seven years. The new Act, therefore, reduced the protective duties on imports of several steel products both from the United Kingdom and from non-Empire countries, and grants a substantial margin of preference to the British imports against Continental imports. The only important modification made by the Indian Legislative Assembly in the Government proposals, is to levy a revenue duty of 10 per cent. on tested steel imported from the United

Kingdom, whereas the Government proposals exempted them completely from such a duty.

The Tata Iron & Steel Company usually publishes its annual report some time in September for the year ended 31st March. The next report is due to be out in a few days' time, and the information we have been able to obtain from Bombay goes to show that for the year ended 31st March, 1934, the Company made the huge profit of 2¾ crores. It has always been a condition of the grant of Protection to the industry, that the Company shall set aside every year out of its profits, Rs. 78 lacs by way of depreciation on its general plant, and at least Rs. 4 lacs on its collieries. We understand that this time, owing to the exceptionally large profits made, the directors will recommend setting aside Rs. 1 crore for general depreciation, and Rs. 25 lacs on the collieries.

The most important items of operating charges in the Company are interest on the 7 per cent. Sterling Debentures, and interest on working capital.

It may be of interest to note that the Company, during recent months, has acquired large amounts of these Debentures from the market with a view to reducing their ultimate liability in 1937. Owing to a very lucky offtake of its products, the Company has been able to save a substantial amount of interest charges on its working capital. It may also be remembered that the accumulation of the huge amount of depreciation set aside every year automatically reduces the interest charges on working capital.

By internal economies and a drastic reorganisation of its Sales Department and a new store purchase policy, the Company has been saving every year very substantial amounts. Out of the substantial figure of Rs. 2¾ crores, the Company has, after meeting the increased demands for depreciation of general plant and collieries, and after meeting the interest charges, head office expenses and Managing Agent's commission, a substantial balance left over from which a dividend of at least Rs. 15 per Second Preference share can be paid, and we understand that this dividend has been recommended in the Directors' report which will be published in a few days' time.

In 1926, a scheme of arrangement was reached between the Second Preference and Ordinary shareholders and the Company, by virtue of which it was decided that the then accumulated arrears of dividend on the Second Preference amounting to Rs. 26 should be ear-marked and interest at the rate of 4 per cent. per annum should be allowed on this amount. It was then decided that, after paying dividends on the First Preference shares, the balance of the profits must be first utilised in paying the full dividend on the Second Preference shares for the current year, and the remainder of the profits should be divided equally between the Ordinary and Second Preference shareholders, the amount accruing to the Second Preference shareholders being appropriated towards the accumulated arrear of Rs. 26. Between 1927 and now, the Company, except for one year, was not in a position to put the scheme into operation, with the result that to-day the accumulated liability of arrear dividend on the Second Preference shares is Rs. 62 per share.

The Second Preference shares are quoted to-day at Rs. 167, which price includes the dividend of Rs. 15 to be declared very shortly. The price also includes the full accumulated arrears of Rs. 62. Allowing for the accumulated arrear liability, the purchaser of the Second Preference shares to-day is buying the Rs. 100 face value share a little over par, carrying a cumulative interest at the rate of 7½ per cent. per annum.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Friday Morning.

Trading in the Stock Exchange during the week under review was rather on a restricted scale than has been the case for some time past and less activity prevailed.

Giltedged section, however, remained fairly steady while the demand for Preference shares and Debentures continued as usual. Cotton shares have maintained their recent improvements. Although there was no distinct selling pressure, Jute Mills' shares accounted for a small set-back owing to profit-taking. The activity in Coal shares, which was so much in evidence during the earlier part of the session has disappeared as the session progressed, and a definitely easier feeling obtained. Among Miscellaneous Industries, the recent activity in Electricals, Engineering and Sugar shares has sustained a set-back and there are at the moment rather more sellers than buyers. Teas continued very quiet with a minimum of business passing, while a slightly more interest was evinced in Rubber shares at current rates.

Government Securities.—Giltedge section ruled fairly steady in sympathy with the firmness in the prices of India Government's Sterling Loans in London. 3½ per cent. Government Paper are quoted at the time of writing at Rs. 91-13, 3½ per cent. Loan 1947/50 at Rs. 101-5 and 4 per cent. loan 1960/70 at Rs. 107-8. Medium dated Loans, however, were in favour of buyers. Other loans remained practically unchanged. The bank rate was 3½ per cent.

Fixed Interest Bearing Securities.—The usual demand continued for Jute Mills and sound Industrial Preference shares and buyers are prepared to pay full prices for any attractive parcels.

Apart from Jute Mills issues, Bowreah Cotton 'B' Preferences changed hands at Rs. 85 and Dunbar Preference at Rs. 191 ; New Victoria Preferences recorded a few deals round about Rs. 5-4.

Among others, Bengal Telephone Preferences are now quoted at Rs. 15-2; Burn & Co. 6 per cent. Preference at Rs. 112; Indian Standard Wagon Preference at Rs. 125; Kumardhubi Engineering Preference at Rs. 75 and Tata Iron and Steel 2nd Preference at Rs. 155-8. British India Corporation Preference remained steady at Rs. 146; Spencer & Co. Ltd.'s 'A' Preferences at Rs. 10-8 and Tezpore Tea (Pref.) at Rs. 12-8.

Owing to scarcity of sellers, only a limited business was reported in Debentures. Calcutta Municipal and Calcutta Port Trust issues are very scarce, while among Jute Mills' debentures, 7 per cent. 1932/42 Hukumchand Jutes changed hands at Rs. 112-8 and 6½ per cent. issue found buyers at Rs. 105-4. Bengal Club 6 per cent. Debentures recorded a deal at Rs. 93. 7 per cent. 1909/35 Gohpore Tea was marked at Rs. 99-4 and 4 per cent. 1939/44 Katakal Lalabazar Railway Debentures were quoted at Rs. 101.

Other Investment Stocks.—The recent rise for Imperial Bank's shares has not been maintained and rates are now below the best. The Fully Paid-ups has declined to Rs. 1,605 and Contributories to Rs. 405. There are now buyers for Central Bank's shares at Rs. 33-4 and Bank of India shares have been wanted at about Rs. 120 but no sellers are forthcoming. Punjab National Bank (Conty.) registered a deal at Rs. 43 after a long interval.

Only a limited business was reported in Light Railways' shares at about last levels. Baraset Basirhat changed hands at Rs. 59 ; Darjeeling Himalayan (ordy.) at Rs. 62 and Dehri Rohtas at Rs. 14. There are buyers for almost all shares enjoying Government guarantee, but no business was reported owing to absence of sellers. Among the shares enjoying District Board subsidy, Buktiarpur Bihar met with a good demand at Rs. 63 but sellers wanted a few points more. Arrah-Sasaram was also wanted at Rs. 58.

There are, however, small sellers for Sara Serajgunge and Hoshiarpur-Doab at last levels.

Cottons.—The improvement manifested in this section during the past few weeks has been well maintained and a fair business was reported at full rates.

Bengal Nagpur Ordinary can be placed at Rs. 21 ; Bowreah (ordy.) was marked at Rs. 326 ; while Dunbar Ordinary accounted for a large turnover round about Rs. 158; Kesoram (ordy.) have been dealt in at Rs. 4-10; Muir Mills (ordy.) kept steady at Rs. 343; while New Ring Ordinary advanced further to Rs. 116. Cawnpore Textiles, on the other hand, have gone out of favour and are now quoted at Rs. 3-12.

Coals.—This section has sustained a definite set-back towards the close of the current week and there are now decidedly more sellers than buyers. Amalgamated which was marked up to Rs. 23-10 have now eased off to Rs. 21-14 sellers. Bengal was marked down to Rs. 257, Burrakur (ordy.) to Rs. 14-8, Equitable (ordy.) which met with a strong demand up to Rs. 28 have come down to Rs. 26-12, Hurralidih can be quoted at Rs. 11-12; New Bheerbhum is easier at Rs. 14-12, New Manbhum at 48-8 and Pench Valley at Rs. 44-8. Raneegunj kept barely steady at Rs. 34, East Indian at Rs. 20; West Jamuria at Rs. 9-4; Bulanbararee at Rs. 9 and Bokaro Ramghur at Rs. 9-2.

Among low priced stocks, Aldih changed hands at Rs. 3-7; Burradhemo at Rs. 5-8; Ghusick and Muslia at Rs. 3-8; Mundulpore at Rs. 4-10; Searsole at Rs. 2-12 and Talcher at Rs. 2-6.

Jutes.—Jute Mills' shares opened steady owing to improved tone in Hessian and raw jute, but as the session progressed an easier feeling was in evidence in these markets which was at once reflected in share values and brought about some set-back there. Howrahs opened on Monday at Rs. 55-1, but gradually eased off to Rs. 54-13 on Wednesday and at the time of writing they again steadied up slightly. Kamarhattys kept barely steady round about Rs. 541.

Clives are now quoted at Rs. 31-8, Nationals at Rs. 24-6, Hukumchands at Rs. 14-12 and Reliance at Rs. 76. Presidencies recorded a few deals round about Rs. 5-6 and Birlas at Rs. 14.

Higher priced stocks, perhaps, with the exception of Lawrence which was in persistent demand round about Rs. 515, are a shade easier due to profit-taking, although there was no definite selling pressure. Anglo-India are now back to Rs. 419 from Rs. 431 although its recently published report announcing a dividend of Rs. 15 per share for ordinary capital was well received by the market. Gourepore also was slightly easier at Rs. 606. Bally kept fairly steady at Rs. 188 ex-dividend, while Champdany was better at Rs. 175 on the publication of its report which is considered satisfactory. Nuddea have come down to Rs. 46-8 on profit-taking while India remained fairly steady at Rs. 338. There are sellers of Kinnison at Rs. 655. Kanknarrah kept steady at Rs. 470 ; Lansdowne at Rs. 158 ; Megna at Rs. 38-4 ; Standard at Rs. 335 and Union at Rs. 480.

Electricals.—Less activity was in evidence in Electric Power Supply Companies' shares. Agra Electric was enquired for up to Rs. 126 while Benares and Jubbulpore were on offer at Rs. 14-4 ex-dividend and Rs. 13-4 respectively. Bareilly changed hands at Rs. 13-10. There are buyers of Patna and Mozufferpore at Rs. 17-4 and Rs. 8-12 respectively. Dacca recorded a deal at Rs. 20 and Rawalpindi at Rs. 25-8. United Provinces Electrics recovered slightly to Rs. 159. There are sellers for Shahjahanpore at Rs. 7-12, Cuttack at Rs. 6-4, and Upper Jumna at Rs. 11. Bhagalpur was marked at Rs. 9.

Bengal Telephones are now quiet, both ordinary old and new shares.

Engineering.—Interest in Engineering shares was also less pronounced with the exception of Arthur Butler which was marked up a rupee further to Rs. 14-8, others are practically dull. Bengal Iron remained quiet at Rs. 3-14 on lower London advices and Indian Iron and Steel at Rs. 7. Indian Galvanizing recorded a deal at Rs. 9-4, Kumardhubi Engineering (ordy.) at Rs. 3-8, Saran Engineering at Rs. 9 and steel products at Rs. 3-6.

Sugars.—Another set-back was recorded in sugar shares and there are now definitely more sellers than buyers. Balarampur was no better than Rs. 18-12 owing to heavy liquidation. There are sellers of Cawnpore at Rs. 35 and Champaran at Rs. 23-4. Ryam can be placed at Rs. 37-8, while Samastipore Central was on offer at Rs. 12. Carew & Co., kept barely steady at Rs. 20-8 and Murree Brewery recorded a deal at Rs. 201. There are, however, a few buyers for Rohtas at Rs. 9-4 and Raza Sugar at Rs. 130, Bharat Sugar changed hands at Rs. 8 and South Behar at Rs. 14-8.

Miscellaneous.—There was no feature of outstanding interest in this section. Bararee coke registered a deal at Rs. 11-12 and Britannia Biscuit improved to Rs. 8. Burma Corporation was mentioned at Rs. 8-8. Calcutta Ice was marked at Rs. 9-4 and Calcutta Tramways (ordy.) kept steady at Rs. 20-8. Indian Wood Products advanced further to Rs. 37-12, while B. I. Corporation (ordy.) kept steady at Rs. 2-6. Howrah Oil kept steady at Rs. 10-2 and Tide Water Oil at Rs. 9-4. Bengal Paper (ordy.) improved further to Rs. 116 and Titaghur Paper (ordy.) to Rs. 22-8. Midnapore Zemindary (ordy.) remained steady at Rs. 75, Calcutta Landing and Shipping was marked at Rs. 12-8 and India General Navigation and Railway at Rs. 107.

Teas.—Owing to unsatisfactory Tea Sales locally and due to weaker London advices Tea shares remained quiet and in certain instances a small decline in values was registered. Enquiry has become very discriminating although the undertone continued one of confidence. Stock figures in London are still substantially heavy and unless the same are materially reduced no improvement in share values is expected.

Hattikhira changed hands at Rs. 28-6, Hasimara at Rs. 45, Ranicherra at Rs. 19-4, Rutema at Rs. 12-4, Sungma at Rs. 12-2 and Tezpore (ordy.) at Rs. 12-2.

Rubbers.—A little more interest was in evidence in Rubber shares and a fair business was reported at hardening rates.

BOMBAY STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Bombay, Thursday Evening.

Money Market.—Money was easy and unchanged with inter Bank call round about 1½ per cent.

Exchange Market.—Exchange has been steady with Banks selling T. T. 1s. 6 3/64d. for November-December; 1s. 6 1/32d. January-February and 1s. 6d. March-June. Banks are buying 3 months bills at 1s. 6 5/32d. November-December.

Securities Market.—Closed weak through it ruled slightly at better levels than last week. 3½ per cent. Paper, which was done as high as Rs. 91-15-6, is now quoted at Rs. 91-10-6. 1941 closed at Rs. 99-3-6; 1947/50 at Rs. 101-3; 1934 at Rs. 104-15; 1960/70 at Rs. 107-8; 1955-60 at Rs. 112-14; 1935 at Rs. 101-13; 1939/44 at Rs. 107-12; 1940/43 at Rs. 108-12; 1938-40 at Rs. 108-12; 1945-55 at Rs. 117-6; Bombay Development at Rs. 103-15; 6½ per cent. Treasury Bonds at Rs. 102-13.

Shares.—The market opened and ruled at slightly better levels than at the close of last, but on closing day of November settlement, the budlee difference in several shares, particularly Steels and Dyeings widened considerably, reflecting over-bought and unhealthy position of the market. Further, Bombay Burma Trading Corporation delared the dividend of Rs. 7½ only on fully paid up shares, which is less than the expected dividend. Therefore, prices of all shares ruled weaker at the close.

Textiles.—Most of the leading scrips have lost a considerable number of points and market closed at very low levels. There seems to have been heavy liquidation in Bombay Dyeings, the budlee rates for which widened as high as Rs. 6-14. Dyeings which were round Rs. 910 were done as low at Rs. 870 and closed at Rs. 881-4. Central Indias came down by 20 points and closed at Rs. 301-4; Centuries reached the low level at Rs. 294-6 and Kohinoors at Rs. 198-12; Swadeshis which were at Rs. 240, eased down to Rs. 206-4; Colaba at Rs. 127-8; Gokaks at Rs. 170; Indian Bleaching at Rs. 148-12; Indore Malwa at Rs. 110; Lakshmi at Rs. 873-12; Morarji at Rs. 1,550; New Great at Rs. 207-8; Sholapurs at Rs. 2,950; Simplex at Rs. 97-8; Vishnu at Rs. 1,587-8.

In spite of the reports that the Mills are working well, an uncertain situation regarding the future of the companies has crept in as a result of over-production in the last few months. *We, however, feel that leading scrips like Bombay Dyeings, Nagpurs, Centuries, Kohinoors,* Swadeshis, and Gokaks are attractive on a further setback.

Hydro-Electrics.—In this group a fall in Tata Powers is prominent, the fall being from Rs. 1,372-8 to Rs. 1,340. Andhras and Hydros, though closing slightly lower, have maintained a steadier tone. Since textile mills have consumed more electrical energy, the earnings for the month of October for Andhras and Hydro companies are expected to be up from Rs. 10,000 to Rs. 15,000 compared to the previous month's earnings. Andhras, which were done as high as Rs. 1,600 this week, are now quoted at Rs. 1,557-8 and Hydros were practically steadier at Rs. 156-14.

There has been heavy liquidation in Steels with Ordinaries, which were done during this week as high as Rs. 101-8 and as low as Rs. 93-8, closed easier at Rs. 95-8. Deferreds, which were around Rs. 437-8, were done as low as Rs. 393 though closed slightly better at Rs. 408-12. In spite of the general weakness in the market, there seems to be good enquiry for 2nd Preferences which are steady at about Rs. 155. The Company has been doing well in the current year; and it is expected that profits for full year will be either equal to last year's or possibly a little more. Therefore, the 2nd Preference shareholders are assured of more than two year's dividend. On the other hand, if steel prices are cut by Continental and British Steel interests, we cannot be very optimistic about the outlook for Ordinary and Deferred shares.

Cements.—This section was practically neglected during the week. Indian Cements were easier at Rs. 345 ex-dividend; Bundis at Rs. 32-8; Gwalior at Rs. 81; Katni Deferred at Rs. 1,185; Ordinary at Rs. 320; Okha at Rs. 175; Punjab at Rs. 23-6; Shahabads at Rs. 343-12; United at Rs. 69.

Miscellaneous.—Belapur Sugars, on heavy liquidation coupled with the rumours of a lower dividend than last year, took a downward trend and closed at Rs. 217-8, practically the lowest of the week. Bombay Burmas, which were around Rs. 450 on declaration of a dividend of only Rs. 7-8, opened as low at Rs. 420 and closed at Rs. 399, and the New shares are down from Rs. 140 to Rs. 132-8. British Burma Petrols on continued selling by a bull, were done as low at Rs. 4-9 but firmed up at the close to Rs. 4-12. Scindhias were lower at Rs. 12-6. Constructions were neglected at Rs. 79. Though the market was not showing any interest in this scrip, the present price seems attractive for lockup, considering the present financial position of the Company as well as its working.

Banks & Insurances.—Imperial Bank Fully Paids and Partly Paids eased down to Rs. 1,602 and Rs. 408-12 respectively. Barodas were steadier at Rs. 102; Central Banks at Rs. 33-4; Bank of Indias at Rs. 119-8 and Unions at Rs. 5-2.

Oriental Assurance closed at Rs. 3,900; New Indias lower at Rs. 35-4 and Vulcans steady at Rs. 8-6.

MADRAS STOCK EXCHANGE.

(By Wire)

(From Our Correspondent)

Madras, November 1.

Securities Market:

The securities market continued dull. There was very little of fresh investment business with sellers predominating in most securities. On strong sterling advices, 3½ per cent. Paper touched at one time Rs. 92, closing easier at Rs. 91-13. A good business was put through in 4 per cent. 1960-70 loan, which at one time touched Rs. 108-7-6. The short and medium-dated securities were not enquired for and recorded no deals, excepting an isolated deal in 4 per cent. 1943 loan a line of which was taken up at Rs. 104-14-6.

Amongst Mysore Loans, the new 3½ per cent. Mysore State Loan proved popular. The market touched Rs. 102-12, at which rate there were good sellers. 4 per cent. Mysore State Loan noted deals at Rs. 107-14, whilst there was a good demand for 5 per cents. at about Rs. 119. The demand for other fixed interest bearing trustee securities was poor. Amongst Joint Stock Company debentures Nilgiri Neergundi debentures were taken up at Rs. 101 with buyers over.

The Preference Share Market was dull with little business passing.

Banks:

Imperial Banks were not so strong as they were in the previous weeks. There were good sellers during the week, with hardly any takers at quoted levels either for the fully paids or for the contributories. Mysore Banks rose sharply to Rs. 252-8 with no shares offering, whilst Indian Banks were done at Rs. 120 and closed with buyers at this price.

Mills:

Mill shares were steady, though the selling enquiry was greater. Business was on a small scale.

Electrics:

The demand for electrics and telephones continued unabated. Madras Telephones had buyers at Rs. 19-12, Bengals at Rs. 18 cum dividend and Rangoon Telephones at Rs. 13-8. Vellore Electrics were done at Rs. 13, whilst West Coast Electrics were abosrbed at 10 annas premium. Tata Powers noted several deals between Rs. 1,360 and Rs. 1,372½.

Cements:

Cement shares were inactive with the exception of Punjabs, which were firm at Rs. 24.

Sugars:

The enquiry for certain shares was good. There was a heavy turnover in East India Distilleries and Sugar Factories Limited Preferences at Sh. 25-9d. and ordinaries Sh. 25-3d., India Sugars moved up further to Rs. 12-12. But Mysore Sugars were a sticky market at Rs. 19-12, Belapurs fell further on account of heavy sales on the Bombay market due to rumours of lower dividend.

Planting:

The planting section was lifeless, excepting a few transactions in Devasholas at Rs. 8-4.

Miscellaneous:

In the miscellaneous section Tata Iron and Steel, ordinary and deferreds were again active. The deferreds touched Rs. 445, closing easier at Rs. 430, whilst the ordinaries after touching Rs. 100-8 closed quieter at Rs. 98. In view of the Deepavali holidays on this market and in Bombay, we expect a quiet market for sometime to come.

NEW YORK STOCK EXCHANGE

Thursday Morning.

LONDON STOCK EXCHANGE

On the Stock Exchange during the week under review most markets have been in a very dull state. The chief exception has been the giltedged market where the demand for British Funds has been strong and buoyant. Among other sections Oils improved and attracted a fair amount of business. Rubber showed a sagging tendency. Tea shares showed several declines. Tobaccos were weaker during the early part of the week but they made a good recovery later on. Kaffir issues were at first quoted lower, but they improved afterwards. Other minings were steady. Industrials were for the most part dull without many prices changes.

COMPANY REPORTS

BALLY JUTE CO., LTD.

Report for the half-year ended 30th September, 1934. Balance of profit brought forward from last half year is Rs. 35,969-9-11. The profit on the half-year's working is Rs. 2,54,207-13-2, to which is added interest on investment Rs. 11,354, interest on Current Account Rs. 9,783-6-11, total Rs. 3,11,314-14. From the above total the Directors have paid debenture interest Rs. 30,000 leaving an available balance of Rs. 2,81,314-14, total Rs. 3,11,314-14.

Now the Directors recommend the payment of a dividend on the Preference shares at the rate of 7 per cent. per annum (Rs. 3-8 per share) free of Income-Tax Rs. 70,000, the payment of a dividend on the ordinary shares at the rate of 10 per cent. per annum (Rs. 5 per share) free of Income-Tax, Rs. 1,00,000, writing off Depreciation Rs. 75,000, carrying forward to next account the balance of Rs. 36,314-14, total Rs. 2,81,314-14.

Due notice has been given regarding repayment of the remaining Rs. 10,00,000 of the Company's Debentures on the 31st March, 1935.

W. F. Scott-Kerr, F. M. B. Latyens, G. L. Scott—Directors. George Henderson & Co., Ltd.—Managing Agents.

WORLD OF INDIAN FINANCE

Friday, Novr. 9.

Another week seriously cut into by holidays! While in Calcutta only Tuesday and Wednesday were holidays on account of Diwali, in Bombay and Madras the markets were closed on Thursday also with the result that the business to report in these columns is of very meagre proportions. Money conditions have continued easy during the week and only towards the end has there been a sign of steadiness. One bank is reported to have taken call money at 1½ per cent. ; but through the greater part of the week call money was ruling only at one per cent. with a marked excess of lenders over borrowers. The course of money rates in the future will be governed by the developments of trade which are at present difficult to foresee. Barring this factor, money conditions will be ruled largely by the operations of the Government. The Treasury Bills policy of the Government continues on the same lines ; and the average rate of accepted tenders during the last auction day has gone up fractionally to Rs. 1-7-11 per cent. as against Rs. 1-7-10 per cent. in the previous week. But the offtake of Treasury Bills has had a fall, in as much as the sales of intermediate bills between October 31 and November 3 amounted to only Rs. 43 lakhs. The total amounts offered on the last auctions also show a perceptible fall from Rs. 258 lakhs last week to Rs. 184 lakhs in the week under review.

Considering that the conditions of the market do not necessitate such a fall in the amounts offered, it is to be wondered whether the setback in the market's offtake is to be attributed to the expectations of higher rates in the coming weeks. It need hardly be pointed out that the tendency during a period of rising rates is to postpone applications with a view to get the benefit of the higher rates in the coming week. As Treasury Bills rates have been increasing without a break for the last five weeks, applicants may, conceivably, postpone their purchases of Treasury Bills to a later period. In consideration of such a possible tendency and in consideration also of the conditions prevailing in the money market, we suggested last week the desirability of Government putting a brake on the rise in Treasury Bills rates. Now that, conceivably, the policy of higher yields on Treasury Bills is interfering with sales, we trust the Government would remove the impression of higher yields being in store for investors in their floating debt. In spite of the fall in the intermediate sales, the increase in the total amount of bills outstanding is marked. For the first week of November is one of very low maturities of Treasury Bills, with the result that even a sale of Rs. 193 lakhs leave an excess of sales over maturities to the tune of Rs. 163 lakhs. The Government are thus well on the way to providing for the heavy maturities of mid-November.

The giltedge market has seen a revival of activity since the holidays. In sharp contrast to the dull conditions prevailing before Diwali, there is now not only a higher level of prices but a greater volume of turnover. It is reported that there has been a revival of speculative interest in giltedge, which was more than moribund a week or two ago. As on former occasions, the impetus for a rise comes from the London market, which reports a phenomenal rise in 3½ per cent. India Sterling Stock from £96½ to £97½ on the 7th instant. For this reason, even the holidays saw a good amount of activity in the giltedge section. When it is remembered that the long break on account of the Pujas was singularly free from business deals, the change comes to acquire a new significance. It is, therefore, no matter for surprise that on the formal reopening of the markets after the Diwali holidays, 3½ per cent. Paper rose sharply from Rs. 91-11 to Rs. 92-5. A large volume of business is reported to have been done at this rate. There was a somewhat quieter feeling since, and 3½ per cent. might be quoted at Rs. 92-2 buyers and Rs. 92-3 sellers. Despite the slight setback there is no mistaking the firmness ; and at the time of writing there is a degree of firmness in evidence and business is reported to have been done at Rs. 92-5. It is significant that this improvement in the local giltedge market has occurred in the face of a setback in 3½ per cent. sterling paper to £97¼. The activity and strength noticeable in 3½ per cent. paper are well spread over the other Rupee securities. 3 per cent. 1941 loan has been bought at substantial amounts by big investors at prices ranging from Rs. 99-2 to Rs. 99-10. The other scrips do not show the same improvement ; but the feeling is distinctly better ; and the medium-dated securities,

which before the holidays were quite unsaleable, came in for business to-day. The improvement, however, should not be exaggerated. For, while formerly it was a case of all sellers and no buyers there may now be said to be both buyers and sellers. 4 per cent. 1960-70 is quite steady. It is well that giltedge has firmed up, without the fear that upsets might be caused in the future by an overwrought speculative interest.

The other sections of the stock exchange have not moved abreast of giltedge. The jute section is, however, very firm, the chief bull point being supplied by the results of the American elections. It is believed that the success of the Democratic party and the assurance, which it carries, that President Roosevelt will have a free hand mean that the American economic trends will be quite healthy. The markets in India expect big things from Mr. Roosevelt ; and with the growing strength of America the demand for India's jute manufactures must show a considerable improvement. It must also be added that the energy, with which the Government of Bengal have been pushing their Jute Restriction Scheme, has also had a good effect on the local market. The recent conferences held by the Government are naturally regarded as a reassurance that the Government have taken on the Jute Restriction Scheme, not merely to propitiate a long standing popular demand in this direction, but with a sincere desire to tone up the economic life of Bengal, by solving the major problem of Bengal's staple industry. We ourselves had remained for a time sceptic about the Government's determination to push the Restriction scheme to success and about the adequacy of a scheme of voluntary restriction for the purpose in view. But since the publication of the scheme of the Government of Bengal there has been growing evidence of the desire of the Bengal Government to work the scheme for all that it is worth. And we recognise that it is the duty of the press to give the scheme the fairest chance.

But the jute section is a mere exception. Interest in coal shares has almost departed. The two factors governing this section are at the moment unfavourable. It is reported that there has been a disagreement among the leading interests as to the rates at which tenders are to be submitted. And as for the larger question of restriction of output, the delay in the announcement of the Government's decision has weakned coal shares. It should be wondered whether the Government at all intended to bring about a scheme of restriction and afford timely relief to the coal industry ; though at the time it was believed that the Government were more inclined to give favourable consideration to the proposals of the industry than at the beginning, it is by no means certain that the Government have overcome their qualms about interfering with the conduct of this industry. At any rate, the extraordinary delay cannot be interpreted by the market as a sign of hope. And so long as there is nothing heartening either by way of introduction of a scheme of restriction or the conclusion of an agreement among the leading concerns with regard to the rates for tenders, it is idle to expect that the price of coal shares will show an improvement or that investors will show greater interest in them. The Miscellaneous section also shows no great activity. As for Bombay and Madras, there were three holidays in the week and our usual *Investor's Supplement* has had to be issued without the Bombay and Madras Stock Exchange reports.

The exchange market has not deviated from what has come to be the normal. But bills are reported to have made their appearance and enquiry for remittance is better. The position in regard to the export of gold has shown great improvement during the last fortnight. The exports from Bombay last Saturday amounted to Rs. 1,57,80,522, The amount of gold exported from Bombay since the abandonment of gold standard thus comes to the staggering total of Rs. 202,190,4731. It is reported that the flow of gold to Bombay from upcountry areas is better now than a few weeks ago. At that time there was reason to suggest that the stocks of gold in India available for export were nearing depletion. This was also the period of continued slump in sterling and rise in the sterling price of gold. On the strength of this, it was suggested that the cessation of gold exports was due not to the depletion of stocks, but to exporters awaiting fair prices. It is strange that the resumption of gold exports should occur during a period of rise in the sterling price of gold. Those, who like to believe that the cessation of gold exports in September and October has nothing to do with the depletion of stocks, would have to explain how the exports come to occur when sterling is distinctly on the upward trend and the future of sterling is expected on all hands to be highly bullish. It is quite possible that during the earlier period some of the gold that was ready for export was held back in anticipation of higher prices and during the present times part of the exports is due to miscalculations. Nevertheless, the pheonomenon of the absence of gold exports during a period of slump in sterling and high exports when sterling is on the rise, suggests that the connection between the gold price and the volume of gold exports from India is not so close as is ordinarily supposed. Facts never present themselves in a form in which cut and dried conclusions can be made ; but it is reasonable to suggest that recent experiences, and especially the smaller inflow of gold into Bombay, points out that we cannot rely on gold exports for long and that the adjustments in the financial and trade policies necessitated by lower gold exports will have to be taken on hand without further delay.

The closing rates are : 1s. 6 3/64d., T.T. till December and 1s. 6 1/32d., T.T. up to March.

3 months /Bills were quoted at 1s. 6 1/8d., up to March.

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

* Market closed.

The upward course of sterling has continued during the week under review. The sterling-dollar rate rose to as high as 4.99 15/16 on November 7 which corresponds with the highest rate for the previous week of 4.98½. Likewise the sterling-franc rate touched as high as 75.96 on November 7 and it must be remembered that the record rate of the previous week was 75.65. So far, our reading of the situation in the international exchanges has proved correct, though this is hardly sufficient reason to warrant an implicit faith in it as regards the future. But it is flattering to find from the Air Mail papers that even the financial papers in London had been slow to apprehend the change that was coming over the position in the exchanges. The City took long to realise that the commercial demand for dollars was tapering off and that the seasonal pressure on sterling was drawing to an end. Even the Exchange Equalisation Fund was apt to think that the problem was one of safeguarding sterling from depreciation, while the position had so altered that the Control would rather have to seek ways and means of preventing an unwanted appreciation. The *Financial News* is clear that every time sterling showed a slight setback from a higher level, the Control felt called upon to support it at a cost which normally it could ill afford. But by the end of the Air Mail week it had been realised that the days of low sterling were over and that official policy should be directed towards the protection of sterling from undue appreciation or towards the realisation of such advantages as a flight to the pound might bring within reach.

The phenomenon of a consistent appreciation of sterling over the last four weeks and the spectacle of the gold standard countries being able to devise nothing more in defence of their currencies than mere proposals of bilateral trade agreements have raised in people's minds the feeling that there is bound to be in the coming months a prolonged flight to the pound, and naturally the question has arisen whether such a flight will be all to the good of Britain or whether Britain might not seek to gain more by it than a mere surplus of funds in London. This means that the old controversy about "bad money" has revived. It will be remembered that Britain having had to go off the gold standard through the withdrawal of funds which had sought refuge in London has raised the fear that an excess of foreign funds in London points to the possible recurrence of a similar catastrophe. Such monies have now come to be known as unwanted or bad money ; and one of the methods suggested of avoiding the inrush of such funds was to remove the protection that has been given by law to the gold holdings of foreigners in Britain. This suggestion has been generally stigmatised as too crude and as marking a departure from the traditional policy of London as a financial centre. It has, therefore, been superseded by others, which aim either at discouraging such funds or the realisation of a tangible gain out of it. The *Financial News*, for instance, has suggested that what time foreign funds flow in a heady stream towards London the Control should attempt to reimburse itself with gold at least equivalent to, if not to in excess of, the gold it has parted with during the days of depression in sterling. It may be easily guessed that during the time sterling was depressed, the Control must have lost goodly amounts of gold in their far from successful attempts to maintain the exchange value of sterling. Once it has parted with gold in that way, it ought naturally to be on the look out for every opportunity of regaining the metal. The *Financial News* suggests, therefore, that the Control should regard itself as having a legitimate right to try to gain gold at the expense of the Bank of France, and that it should not apprehend any unfavourable reactions from such a policy. It will be seen that, if the Control were to start acquiring gold against sterling that seeks its way to London, the effect would be to prevent the appreciation of sterling. If, in spite of such action money should continue to flow into London the increase in the gold stocks would be ample compensation for a rise in sterling.

Even more important than the suggestion of reimbursing gold is the proposal that banks should discontinue the present policy of allowing interest on current deposits from foreigners. This proposal gains point from the breakdown of the gentlemen's agreement amongst the Clearing Banks to maintain bill rates. This agreement has been working for nearly a year ; but it was obvious from an early stage that the difficulties in the way of maintaining the agreement would soon prove to be insurmountable. As the agreement was in reference to bill rates and as the quantity of bills offering on the market was growing smaller owing to the shrinkage of international trade, it was evident that the agreement could not hold on for a long time ; and during Air Mail week the agreement definitely broke down. The consequences of this step are obvious. There has been increased competition for the small quantity of bills offering ; and with such a large volume of surplus resources Treasury Bills rates are bound to go down. The effect of these developments on the general trend of interest rates may be considered to be benficial to trade and industry. One may even take the view that the benefits to trade and industry will far outweigh the loss that banks might sustain on account of the lower levels of interest rates. Whatever the truth may be in this regard, it is certain that not much can be said for British clearing banks offering comparatively high rates of interest on foreign deposits, while, the return on their own investments is being cut finer ever day. Foreign centres like New York do not pay any interest on their current account and there is no reason why British banks should not follow the same practise. The relevance of this to the question of international exchanges lies in the fact that with the discontinuance of interest on current account deposits from foreigners, the flow of foreign funds to London might be greatly discouraged.

This is, however, more than doubtful. For when funds are being moved from one centre to another owing to the fear of serious depreciation in capital value, the denial of a small rate of interest on current account will not be a deterrent to such a movement. For where on the scales is the small amount on account of interest against the large cut in capital values? It may, therefore, be said that when panic about Continental gold currencies is in the increase, any change that Clearing Banks might effect in regard to the interest on their deposits will not make a serious difference either to the flow of funds or the level of international exchanges. As for any action that the British Government might take by way of regaining the gold that the Equalisa-

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

CHANGING PATTERNS OF WORLD TRADE

It is one of the perversities of life that the task of surveying world economy increases in complexity as it grows in practical importance. Governments and businessmen alike need a careful and illuminating interpretation of current trends; for the days, when detailed statistics of foreign trade sufficed for purpose of public policy and private business, are no longer with us. Every step forward requires full knowledge of the conditions around. And knowledge consists not in the gathering of statistics, but in their intelligent interpretation. In the present position of world economy, one has to go farther and say that statistics have to be interpreted in such a way as to afford a clue to the trends of the future. Here again, the task is far more difficult than in any earlier period, for economic trends are affected by conscious policy to a far greater extent than before. Most academic treaties on trade depressions are based on the implicit assumption that there is an inexorable cyclic trend and thus minimise the place of conscious control in the economic fortunes of the nations. While this view might not be far wrong in the past, it is wholly untrue to-day. Conscious control, whether it be in the nature of national planning, or in the nature of concerted international action to restore the regime of free international trade, has a great deal to do with the course of world economy in the future. Conscious control has been exerted to a great extent in the past; and such control has on the one hand, met with natural resistances within the national economies and on the other, aggravated the complications of international economy. Whether the control will be abandoned in view of the obstacles or whether it will be persisted in and perfected, is a question which must be answered before any attempt can be made to peer into the future.

* * *

Thus a survey of world economy is beset with numerous difficulties. The statistical data, besides being incomplete, are also more intricate owing to the chaos of currencies. Values have to be translated into different standards and the significance of each and their inter-relation determined. Transient causes have to be taken due note of and the normal tendencies brought into their own. While the purely objective study is itself so ponderous, there is also the task of investing this study with a formative value. The Economic Intelligence Branch of the League of Nations has all along worked under the convenient assumption that, not only is the regime of free international trade the best for the world, but it is bound to recover from the prolonged eclipse of the post-war period. Its publications have been inspired by this belief, though it is nowhere explicit; for an international organisation cannot bring itself to condemn the policies and actions of any country or group of countries. To the extent that this belief is out of tune with the aspirations and intentions of a great part of the world, the publications lacked all but a mere academic interest.

* * *

But, as we said earlier, an interpretation of current trends free of the obsessions of a past age has become increasingly necessary. And we are glad to note that the *World Economic Survey 1933-34* by Mr. J. B. Condliffe comes as near to such interpretation as is consistent with a scientific outlook. Annual publications like these, especially when they are issued under the auspices of a body like the League of Nations, tend to become stereotyped. The last two issues of this *Survey* gained their importance from the fact that they were published at a time when there were visible signs of trade revival and people were at a loss how to rate them. On this occasion, however, there is not what journalists would call topical value. We cannot claim, as we could last year, that the *Survey* would clarify the ideas of the business world. But we believe that Governments all over the world have a great deal to gain by a study of Mr. Condliffe's work. For Governments have more need than the business classes to have clear ideas of the changes in the structure of world economy.

* * *

Mr. Condliffe himself has to be clear in his mind about the trend of economic policy, if he is to invest his survey with a practical importance. It is pertinent to recall that in our review of *World Economic Survey 1932-33* we observed! "We would prefer to see Mr. Condiffe treat the material at his command from two different standpoints: (1) economic readjustment calculated to help the resumption of traditional international trade relations; and (2) economic readjustment such as would make conditions in each country more helpful to planning without a too serious break from individualism, for, it must be remembered, that national economic planning does not necessarily mean a violent swing towards complete Socialism." Mr. Condliffe was not unaware of the importance of such a distinction. But, according to him, it was difficult to preserve such a distinction in the *Survey* for "the real form which modern economic organisation has taken is neither that of a series of isolated units nor that of a single economic world unit, but that of a series of partly closed, partly interdependent, national economies linked in sihfting equilibrium, the changes in which are expressed by alterations in the rates at which the respective national currencies are exchanged.....The realistic consideration of economic problems is possible, therefore, only in this setting of national interdependence as distinct from either national economic independence or cosmopolitan dreams of world polity.....Nor is it possible to separate national from international equilibrium."

* * *

The importance of the year 1933-34 lies in the fact that at the end of it it is necessary to observe the distinction. The *World Economic Survey* this year contains an examination of world economy not only as an integral unit but as a congeries of more or less separate national economies, each calling for separate treatment. For the feeling that there must be in the long run a return to free inter-national trade, though it dies hard, is still dying. At any rate if the author of the *World Economic Survey* is to accept the belief in free trade implicitly, his survey would suffer in many respects. And we are glad to find that Mr. Condliffe has gone forward on the path we indicated last year.

In this phase of transition, economic trends are difficult to interpret. Last year, Mr. Condliffe was able to say that signs of natural revival were visible in the autumn of 1932 and, though there was a set back since, not all the gains were lost. The recovery was essentially international, though the trend towards economic nationalism was strong. In the year 1933-34 matters were, however, different. It opened with the break-up of the World Economic Conference, which meant clearly that there was to be no concerted international effort to restore the regime of free international trade. So long as these hopes could not be entertained, it would be idle to wait for a natural and automatic recovery. The nations had already tried their hands at conscious regulation ; and the attempts were not such as to be abandoned half-way. The break-up of the World Economic Conference was, therefore, the signal for Governments to plunge deeper into national economic policies. The course of world trade and economy is necessarily affected by the inter-actions of a large number of national policies. To appraise the position at the end of 1933-34, it would be necessary to view world economy both as a unit and as an assortment of national units. The former is also necessary because natural forces are not rendered altogether nugatory. Mr. Condliffe aptly points out that the events of 1933-34 "must be considered in the light both of a more favourable cyclical turn and of a changing economic structure."

* * *

We may now proceed to take note of the main features of the year. The one fact, of which one may be sure, is the slowing down in the rate of the decline in world trade. More than this, it is difficult to say. For though the depression is more than four years older, it is still true that in no single month since the beginning of 1930 when the total gold value of the world trade was equal to what it had been on the corresponding month of the preceding year. Even measured in sterling, the decline was equally regular, though not as great, until the latter part of 1933 when there was some tendency towards increase. But the decline in the quantum of world trade has been much less. It may be mentioned here that measured in sterling, the fall of world trade in 1933 was slightly more than half (52 per cent.) of its 1929 value. Measured in gold, it is just over a third or 35 per cent. But the reduction in the quantum of world trade is approximately 25 per cent. from the 1929 level. It is significant that the quantum of world trade during the first quarter of 1934 increased as compared with the first quarter of 1933, and there was a slight increase during the second half of 1933. But trade was increasing only in certain areas and in certain commodities, notably some important raw materials. The increase in the trade in raw material may be attributed partly to the replenishment of stocks, which had been depleted over a long period of moderate purchases, and partly to the preparation for an anticipated increase in the exchange of manufactured goods. The increase in the trade in raw materials has helped the exports of these commodities and this explains to a large extent the facility with which countries like Australia have been able to reorganise their national economy during the latter years of the depression.

* * *

But the improvement in the position of these countries is yet to reflect itself in a greater demand for manufactured goods. Whether this development will occur at all must be regarded as a matter for doubt. For into this enters the question of the distribution of productive activity amongst nations of the world and changes in the structure of world economy. So far, 1933-34 shows in clearer relief the tendency of world trade to be limited increasingly in respect of food stuffs and manufactured articles. The following table shows the variation in the effects of the depression in world trade in the three divisions into whnch they are generally classified.

Trade Movement by groups of commodities:
Estimated Figures for World Trade.
(Base: 1929=100)

	Foodstuffs		Raw Materials		Manufactured Articles	
Year	Quantum	Gold prices	Quantum	Gold prices	Quantum	Gold prices
1929	100	100	100	100	100	100
1932	91	51·5	80	45·5	58	64
1933	83·5	45.5	86·5	41·5	59	56

The fall in the trade in foodstuffs is best explained by the fact that the production of wheat in the wheat importing countries is in actual excess of the producing countries in America. This circumstance affords the clue to what may be considered the salient feature of world economy in its present phase. For this emphasises the determination of most nations to be self sufficient in the matter of necessary supplies. The encouragement to the production of wheat in countries, which are not eminently fitted for it by nature, also shows the determination of the Governments to persist in the economic planning which they have framed for themselves under the stress of the depression. The most notable incidence of economic planning on the readjustment of international trade relations is the tendency to reduce, and possibly wipe out in the near future, that part of world trade which is triangular. For an integral part of any scheme of national planning is the conclusion of bilateral trade pacts which seek to eliminate the uncertainties in the balance of payments and the competition of cheaper foreign producers with the domestic producers. As the objective of such bilateral trade pacts is to seek a balance between each pair of countries the pros-

pects of triangular trade might be considered to be very dark, indeed. A sufficient number of bilateral trade agreements has been in force in 1933-34 to show clearly the effects of such pacts on the composition and character of world trade.

* * *

The following table shows the disproportionate shrinkage of triangular trade in the period between 1929 and 1923.

	Bilateral Trade		Balance of Total Trade		Triangular Trade	
	1929.	1933.	1929.	1923.	1929.	1933.
Value of Trade in Gold dollars (000,000's) ...	33,803	11,236	4,551	2,203	8,615	2,233
Index numbers (1929=100) ...	100	33	100	48	100	26

It need hardly be pointed out that the shrinkage of trainagular trade affects with particular severity the countries whose prosperity in the past had been largely dependant upon *entrepot* trade or on the fabrication of manufactures for market other than the sources of raw materials or the sales of specialised product in a particular market, different from the import market. Since a large part of international trade had been triangular in the past, it is obvious that to attempt to build up balanced bilateral trade must mean a great shrinkage in world trade as a whole. This has a special significance to this country where we seem to be dangerously drifting into the unwise vogue of bilateral pacts.

* * *

The foregoing survey will make it clear that 1933-34 is different from the previous year in that the progress of national economic planning has supplanted national recovery as the most important feature. There is less reason now than ever before to hope for that international understanding which will help the cyclical turn by a restoration of international trade. The fact that changes are occuring in the structure of world economy must be accepted for what it is, and it is idle to kick against it. Even the Bank for International Settlements expressed recently in its annual report the view that "as world economic conditions stand to-day, it may well turn out that the shortest, though hardest, route back to the healthy and stimulating financial and economic internationalism which existed almost unnoticed in so widespread a degree before the war will be found to pass first an area of nationalism, in which each country endeavours to liquidate the past by its own efforts and strives for national reconstruction by isolated endeavour." We may permit ourselves to recall the view we expressed at the time of the break up of the world economic Conference. We observed in our issue of July 1933 that "unless the task of world economic recovery is recognised as the problem of integrating various planned national economic policies, future economic conferences will be only meeting in vain." We added that "the problem should be realised for what it is, as something other than the application of a few preconceived principles of international trade and finance." It is to be hoped that the governments will not falter in their steps towards natural reconstruction though this hardly means that uneconomic production should be persisted or that foreign trade is an unmixed evil.

INDIAN TEA FOR RUSSIA

In *Indian Finance* of October 13 we drew attention to the great possibilities of the Russian market for Indian tea, with the re-entry of Soviet Russia into the international economic sphere. In pre-Revolution days Russia absorbed a substantial portion of Indian black tea, India being the largest single supplier of world tea. In a subsequent Press statement, the Indian Tea Association reviews the position exhaustively, stressing the point that only by an increase in the consumption of tea all over the world can the tea industry's problem of overproduction be solved satisfactorily. With this object in view the International Tea Committee, representative of the industry in India, Ceylon and the

CALCUTTA BOMBAY CHITTAGONG.

Netherlands East Indies, has evolved a scheme, referred to in *Indian Finance,* to sell tea to Russia on credit terms. Some years ago Russia consumed as much as 180 million pounds of black tea annually, but of late her consumption has dropped to 40 million pounds.

* * *

On the ample evidence that Russia wants more tea than her present cash and credit resources can buy, the International Tea Committee has devised a scheme by which credit should be found for the purchase of tea by Russia in addition to that which she is now consuming. This credit is guaranteed by producers in India, Ceylon and the Netherlands East Indies in proportion to the benefit which will accrue to each country on the successful outcome of the scheme. In essence the International Tea Committee's idea is that there should be established in London, for trading with Russia, a Sterling Company to be styled the Anglo-Russia Tea Trading Co., Ltd., which will buy tea in London, Amsterdam and Calcutta markets on spot cash terms. The Company in turn will sell this tea to Russian buyers on 12 month ssterling drafts drawn by the Company on, and accepted by, Russian buyers, such acceptances to be guaranteed by endorsement by the Soviet Republics Union through the Trade Delegation in London and by the Moscow Narodny Bank. No use can be made of this credit unless the proposed Anglo-Russia Tea Trading Company is satisfied that the tea is purchased by Russia for consumption over and above that which Russia is at present consuming.

* * *

On the assumption that approximately 75 per cent. of the trade in India, Ceylon and the Netherlands East Indies will subscribe to the capital of the holdings companies, India will be called upon to make a cash subscription of Rs. 8 lakhs, having a further liability of about Rs. 150 lakhs representing the uncalled premium on the shares of the Anglo-Russian Tea Trading Co. Subject to approval by the Government of India the extent to which a tea producer subscribing to the holding Company with a share equivalent to 2,000 maunds would be involved is, according to the Indian Tea Association, Rs. 450 in cash with an uncalled liability of about Rs. 8,500. A subscriber cannot lose any money since the whole of his liability is secured by a Government guarantee, while there are reasonable prospects of a return on his capital investment. The Indian Tea Control Act, 1933, regulates exports of tea and by the International Trade Agreement India's contribution is 383½ million pounds to the total standard quota of over 807 million pounds. Each estate in India is given an export quota based on its best crop in any one of the 4 years 1929-32, plus allowances for areas recently planted. The total of the export quota given to each estate represents the quantity which India can lawfully export in a year.

* * * *

Any increased in world consumption brought about by the demand in Russia must increase the export quota determined for each estate and therefore, in increase in production followed by the lowering of costs. To meet the needs of the export market for the year April 1, 1934 to March 31, 1935, an export quota of 64.7 per cent. was biven to each estate in India and, were consumption in Russia to increase by 40 million lbs., it would be possible for the export quota of each estate in India to be increased by 4.6 per cent. or 69.3 per cent. The effect of this marked increase (remembering that India's total crop is about 510 million lbs.) on the industry's position can be readily visualised.

* * * *

Provision must, however, be made for a possible default by Russia and the representatives of the industry in India, Ceylon, and the Netherlands, East Indies recommend that producers in the three countries must all share the risk of providing credit. The Indian Tea Association are of opinion that this is only fair. The Association suggests that the Governments of India, Ceylon, and the Nertherlands East Indies should be asked to levy a cess on all tea producers sufficient to cover the holding companies' loss. This cess will be imposed only in the event of default by Russia. India's maximum financial commitments, in the event of Russia's default, will be approximately 8 pies per lb., an amount which by reason of the increased competition in auctions to supply tea to Russia, might easily be covered by an improvement in the price of tea in one season. Should the Government of India agree to a cess, there is no possibility whatsoever of subscribers to the rupee holding company in India losing their money, as it is a condition precedent to the commencement of operations that the Governments will agree to impose a cess on all tea producers in the event of Russia's default.

PROPAGANDA AND PROFIT.

We have repeatedly stressed the need of developing the internal market for Indian tea. It is true that the Tea Restriction Scheme has for the nonce solved the problem of severe international competition in the world markets by regulating the exports of tea. But it is a palliative, not a cure. Especially in India, the Restriction Scheme touches but the fringe of the problem. The productive capacity of India is hardly yet exercised even at high pressure and already the problem of surplus production has assumed serious proportions, and a second Scheme of restriction of output is in the offing. With Russia trying to grow a part of her requirements of tea, with China beginning to figure prominently in the world markets, with Egypt slowly losing its tea palate, it is obvious that India cannot depend for long on foreign markets for the continued prosperity of her tea industry. There is a logical limit to the level to which restriction of supplies can bring the price up to compensate for a diminishing volume of

exports. After all, one of the reasons at the root of the demand for tea is that it is the cheapest beverage.

* * *

The ultimate salvation of the tea industry lies in making India more tea-minded. Every penny judiciously spent with this object in view shall, like the seed in the parable, return a hundredfold. Notwithstanding the good work that is being done by the Indian Tea Cess Committee, the paucity of the resources at their command naturally cramps their style. We hold that much of the revenue from the cess on tea that is spent now in dangling inducements before the eyes of tea-hating Americans, could with greater profit, be spent on propaganda work in India. But even if the entire amount of the cess—a mere 22 lakhs odd—were spent in India, it would still be extremely inadequate. A sub-continent with 350 million inhabitants, where traditions die hard and a thousand religious and other prejudices militate against the introduction of new manners, is not easy to convert to the tea-habit. The actual result achieved by the Tea Cess Committee, in spite of these severe handicaps, is deserving of the highest praise.

* * * *

But a puerile method of criticism has lately tried to find out a relationship between the price of tea and the cost of propaganda. Expenditure on propaganda is investment; and when the productivity of the investment is admittedly in the future, it is no use judging the cost of the propaganda by the current field. The question is whether the tea trade believes in the ultimate profitability of such propaganda or whether it does not. If it does, it would do well to remember also that half-hearted propaganda or its premature cessation would mean sheer waste. We maintain that there is need for increased resources in the hands of the Tea Cess Committee if their propaganda work is to achieve better results. Whether it is by withdrawing the monies spent on propaganda abroad or by increasing the cess on tea, it is necessary to intensify the campaign in India to make India more and more tea-minded. When a large proportion of the 350 million inhabitants are converted to the tea-habit, the tea industry will have been for ever placed beyond the pale of danger.

(Continued from page 1139)

tion Fund has lost during the days of depression in sterling, this may, undoubtedly, act as an obstacle to a rise in sterling. And to the extent that it prevents the fall in the franc or any other gold standard currency, the gold standard countries, far from feeling any grievance against Great Britain, should actually feel thankful to her for affording them this help during the moments of crisis.

The only question, therefore, is the extent to which the panic about the gold standard currencies might rise. It is generally believed that the position of Belgium is very much more difficult than that of Holland and France. And it is also well-known that, while going into the last gold bloc Conference, Belgium actually expected that the Conference would make some gesture of help to her either by way of a loan or by promises of other definite help. To the extent that the Conference failed to satisfy Belgium's expectations, the position of the gold standard currencies might be said to have been weakened. It must also be remembered that the political position in London has always proved to be a source of greater trouble to gold standard currencies than even their intrinsic position. And the week has afforded a significant instance of what upsets in French politics might cause in the international exchanges. Though all along we had reason to believe that M. Doumergue's Government have enjoyed a wide support, which has ample justification in what they have achieved during the months they have been in office, it would now appear that the kaleidoscope of French politics is to have a few more turns and the groups will present themselves before long in the new settings. At the moment it is difficult to say how far the threat to the French Cabinet will prove true. The Radicals on whom the fate of the Government depends have, it is reported, adopted a resolution in favour of the maintenance of the truce between the parties. But the fate of the Government, undoubtedly, hangs in the balance. And the uncertainty is reflected in a further weakening of the franc and a rise in sterling to a level of 75.96.

Clive Street Gossip

Grosvenor House,
London: October 26.

Eavesdropper writes from London:

In tube and on bus, in restaurant and theatre, in the City and the clubs and homes, there has been only one theme of excited talk—one universal topic of wistful discussion. The epic air race from Mildenhall to Melbourne covering a distance of 11,000, miles has been followed, with intense interest, by the millions of this city, the daily papers bringing out specials for each hour of progress. Living in Grosvenor House, this event has been of surpassing vivid interest to me as the House ran a machine in the race and it was the winning machine, too. As the waiter brought in the tea in the morning, or the valet turned up later to get my clothes ready or the maid peeped in to look if I had left for the City, each one was full of the latest information about the progress of Charles Scott and Campbell Black who piloted a De Haviland plane. In a prominent position in the lounge was installed a board on a tripod stand on which, from hour to hour, the relative positions of the fliers were indicated by flags. "The House plane is leading, Sir"—was the greeting with which every official and servant of the Hotel accosted you as he passed you. If the pride of those living in these premises had thus a parochial turn, the pride of London was not less parochial as it was the British plane that was the winner. And when Scott and Black had finished the marvellous feat of covering 11,000 miles in just less than 72 hours, the Evening papers came out with forenoon and noon editions, the plecards prominently and piquantly announcing "Great Scott" and "Scott there—full story," etc. England has every cause to feel jubilant over this feat. This jubilance was all so infectious; it was all so great an experience to watch this stir and storm.

And, apart from the amazing character of this feat, there is much in this flight which must make, and has already made, people think a good deal on what this achievement means in its repercussions, consequences and potentialities. In examining this aspect of the matter, the performance of Scott and Black appears to have somewhat lesser significance than that of the Dutch fliers, Parmentier and Moll, who were piloting an American-built Douglas Air Liner. As the City Editor of the *Daily Herald* has emphasised, the performance of that Air Liner and the fact that throughout the flight it has carried mails and cargo and provided three passengers with all the comforts of a luxury air trip, are obviously of vast importance in the future of commercial Aircraft. The words of Mr. Francis Villiers deserve quotation in full:

> The ability of a commercial air liner taken off its ordinary service and entered in the race without any special preparation, to fly to Melbourne, in only a slightly longer period than that taken by a special speed machine, and at a rate which, despite a considerable number of stops for petrol, has completely smashed all previous records, means that many former ideas regarding the development of commercial aircraft in the near future must be revised.

In simple terms, the Dutch pilots have proved that a commercial Air Liner could safely and easily do anything between 3,000 and 4,000 miles a day. Thus expressed, one begins to realise that the service which the Imperial Air ways has been rendering has been neither regular nor punctual nor reliable nor speedy. We in *Indian Finance* Office have a special grouse in this regard. Our *Air Mail* packets are posted in London in the morning of Saturday; they reach Calcutta in the afternoon of the following Saturday; thanks to the busybodies in the Customs Office, they are not delivered until late on Monday; and we are not able to make use of these till the subsequent Saturday. That is, the *Air Mail* takes, for all practical purposes, a fortnight so far as its utility to *Indian Finance* is concerned. And for such delayed service, we pay through our nose. For a copy of the *Economist* which costs one shilling, we pay six shillings for *Air Mail* stamps. For six issues of the *Financial News* which together work out to one shilling, the stamps required are twelve shillings. Paying these onerous rates, we seem to gain precious little as we are only ahead of the Steamer mail by barely a week. Let us imagine what will be the state of affairs if the Imperial Airways were to take but four days for the London-Calcutta journey. *Indian Finance* will then be able to get its items up to the immediately preceding Friday. And why should the Imperial Airways take nearly double the time which the Dutch *Air Mail* takes even under present conditions in the link-up with Java?

What Parmentier and Moll have achieved is but an emphasis and underlining of what the Dutch have been doing in commercial flying for years. The achievements of the K. L. M. Company have compelled the admiration of everyone interested in aviation. For over six years, the Dutch have been flying a passenger and mail service to Batavia in the Dutch East Indias. It started as a monthly return service; and the trip took ten days each way. 1919 saw this service converted into a fortnightly one. Since 1932, a weekly service has been in force; and it has worked with the regularity of a clock. The trip now takes

eight days in each directton. It would, perhaps, be more correct to say that the maximum time taken is eight days, as, not infrequently, the journey has been accomplished in shorter time. It may be said that the K. L. M. Air Lines are now the speediest long-distance transport service in the world. I remember my friend, Mr. Ghulam Mohamed, making up his mind on a Thursday to undertake a foreign tour, leaving Calcutta on a Saturday, and keeping a dinner engagement in London on the following Thursday. The lesson of the London-Melbourne Air race will not be lost on the Dutch Air authorities, and I, for one, shall not be surprised, if, in the next westward voyage, Mr. Ghulam Mohamed is able to fix a dinner appointment for Tuesday, if not Monday. And then ,we may ask, as does the writer in the *Evening News,* what will the Imperial Airways service along the same route get to look like?

The Air marvel of this week has certainly fanned British pride ; it must also shake British complacency. The following is from the Air Correspondent of a morning paper :—

> 'The amazing speed at which the American Douglas air liner, flown under the Dutch flag in the Mildenhall-Melbourne air race, has reached Australia, is forcing the British Post Office and British commercial aviation completely to overhaul its services.
>
> Late last night the London Chamber of Commerce, which for years has been urging the Post Office, the Air Ministry, the Government and Imperial Airways to run faster air services, was busy preparing a statement on the situation that has now arisen.
>
> To-morrow a statement backed by businessmen and Chambers of Commerce all over the coutury will be issued. It will point to the Dutchmen's achievement as the essential reason why British services should be speeded up'.

That Britain could build commercial planes for speed has now been conclusively demonstrated by Charles Scott and Campbell Black who have won the 11,000 miles race in a De Haviland Comet in a little under three days. But it remains for the Imperial Airways to prove that they can work as speedy a commercial air service. Meantime, there is at work something like a 'dog in the manger' policy. While the Imperial Airways cannot deliver mails in less than a week, the Dutch Air Plane must not deliver mails in India. The Imperial Airways have thus the monopoly of carrying mails to India ; but it is unfair that a monopoly of this nature deprives the user of the undoubted punctual and quick service which the Dutch commercial planes furnish.

There are other equally interesting sidelights in this great Air race. The ordinary shareholders of the De Haviland Aircraft Co., the manufacturers of the Comet which was piloted by Black and Scott, lay comfortably in their beds dreaming sweet dreams while the two intrepid Airmen were flying over the seven seas, day and night, without rest or sleep, food or shave ; but while the winning pilots have received a gold cup and prize money of £10,000, the owners of the De Haviland shares have been presented with an unearned increment of £45,000 due to the appreciation in the value of the De Haviland shares.

By the same token, there will be accelerated progress and many-sided development both in the manufacture of aircraft and the conducting of air services. The existing aircraft manufacturing companies and air liner service companies would need to expand their capital ; and new concerns would also see the light of day. Discriminating investors in air companies' shares will, there can be no doubt, reap as great a harvest as did their earlier confreres in railway shares in the era of railway companies and in motor shares at the start of the motor age. These remarks lend a point to, and enhance the significance of, the Indian National Airways, the prospectus of which is, I find, published in the issue of *Indian Finance* which reached me this week. Indian National Airways has as fine and distinguished a board of directors as one could get together in India. It has its field cut out. The developments of this week furnish the token and foster the hope that its field will be more thoroughly and more speedily exploited than even its promoters thought as they formulated its scheme and worked out its plan.

Had I money to invest and were I embarrassed—as many a money-bag is now-a-days embarrassed with idle funds—thank God, this is not one of my embarrassing problems—I would unhesitatingly subscribe for the shares of the Indian National Airways, both because of my faith in its present plans and my hopes of its future prospects.

As I am going to the post, I read an announcement in the *Daily Telegraph* that a Cabinet Committee, which has been considering the terms of the subsidies granted to Imperial Airways and the modifications to be introduced in the present system, is now giving special attention to the speed aspect. The following should be considered cheering news :

> 'It has been impossible to ignore the great speeds attained, and the fact that the American Douglas entered by the Royal Dutch Air Lines worked to a schedule of four days.
>
> This Dutch time could easily be the established regular schedule.'

It is now proposed that the British Government shall guarantee to the Imperial Airways a minimum mail load of twenty tons per week and that this guarantee should carry certain obligations. 'It is reasonable to assume the public will expect a guarantee of speed in return for the expenditure of public money involved.' It may be quite on the cards that the London-Calcutta distance takes no more than three days in the very near future.

Sir Osborne Smith left London this mid-week and he hopes to reach Bombay on November 5. He will make a stay of a week in the Western Capital where he meets Sir James Grigg. There will, probably, be a meeting of the Central Board of the Imperial Bank at which Sir James may be present. The question which the Finance Member wishes to get settled, is the date on which Sir Osborne will be relieved by the Imperial Bank of India. There is a great deal of important work which he must get through before he can leave the institution which he has served so well and the directors of which now feel that it is almost impossible to spare him. I doubt if Sir Osborne can get away before next Spring, which means that the Reserve Bank will work to a slightly modified time-table. The present intention is to open the business of the Bank for Government accounts as from April 1. But what a day to commence a new business! Why not start this business as well as that of scheduled banks on July 1? It may well be that convenience of Imperial Bank, tenour of other developments in regard to preliminaries of the Reserve Bank, and, sentiment about All Fool's Day may all combine to fix July 1 as the opening date of India's central banking institution. The habitat of the Bank, so far as Calcutta is concerned, must also be reconsidered from the point of view of propitious antecedents. The proposal which now holds the field is that the Head Office in the Western Capital should be in the old Alliance Bank building. The associations of this place suggest the desirability of taking the first two floors of the adjoining building belonging to the National Insurance Co., say for three or five years pending the construction of a new building for the Bank, of noble design and impressive architecture. In a country in which sentiment counts, it is not sentiment to ask for an auspicious date and happy housing.

To return to Sir Osborne. The *elite* of the City had gathered on the platform to bid him God-speed; but looking at the select gathering, one could hardly believe that these were the men that controlled the destiny of the biggest financial centre of the world. They were all so simple and unostentatious, in homely attire and in quiet talk among themselves. Mr. Montagu Norman of mysterious fame and elusive movements was there—a signal honour to the Governor-designate that, amidst his preoccupations, the Chief of the Bank of England found time to get away to the Victoria Station in a forenoon. Lord Glendyne of Messrs. R. Nivison and Company (the biggest stock brokers and underwriters in the world) had arrived earlier than others as he is, perhaps, the most valued and intimate friend of Sir Osborne in the City. Mr. Kershaw, as cheerful-looking as ever, was also amongst those present. Mr. A. D. Shroff, with a tasteful bouquet presented in right Indian style, looked as though he was himself one of the familiar figures of London business circles; everyone greeted him cordially and talked to him intimately. By all tokens, the City is as pleased with Sir Osborne's appointment as are all sections in India. And I felt bucked that, from the outset, I had backed not only the winning horse, but the horse of right mettle.

Mr. J. B. Taylor, the Deputy-Governor-Designate, travels by the same boat as Sir Osborne. Mr. Taylor was provided with a seat in Sir Osborne's room in the Bank of England; and, during the days he was in London, he was thus enabled to enrich his knowledge of City contacts and technique. Sir Osborne feels very happy in his Lieutenant, and there can be no doubt that Mr. Taylor is absolutely the rightest choice from among the civilians. Sir Sikandar Hayat Khan, whose appointment was announced in yesterday's papers, has a great deal of administrative experience. The *Financial Times*, commending the selection, emphasises that he has taken no part in any economic or communal controversy. G. L. M. might well exclaim that a blank outlook is not necessarily synonymous with a fresh outlook. To me, the disappointment is great and personal that the two men, who were fittest for this office, were left out because of political or tactical reasons. Nevertheless, I must say that Sir Sikander's appointment has been well-received here by the City and the press. Mr. F. H. Brown of the *Times* has been greatly struck by Sir Sikander's bearing, understanding and mental poise. And at a lunch which the chief of a leading eastern exchange bank gave me yesterday, everyone present seemed to have known Sir Sikander personally and spoke approvingly of his qualities and qualifications. It is obvious that the Indian Deputy-Governor-Designate has a pleasing and persuasive personality. Likewise I received a similar impression when I met him and exchanged a few words with him in a wedding *shamiana* in Lahore four years ago. He carries himself with great dignity, and, while he converses vivaciously, he can listen attentively.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, November 6.

This is the time when Officials begin to get budget-minded. Not that any attempt to frame estimates will be made immediately, but that they are beginning to exercise their minds on what budget may be like. Certainly the opinion held here is that Sir James Grigg may find himself better off than he thought at one time.

* * *

The Customs returns are fulfilling expectations and, indeed, may be said to be slightly better than anticipated. Sugar Excise has not yet begun to yield any income ; but now that the sugar season is about to commence, money should begin to pour into Government's coffers. The Match Excise Duty may not be found disappointing. In fact, it is believed that the Match Excise may yield almost what is expected.

* * *

The Government of India may thus be, on the whole, quite well off at the end of the financial year. The question, however, remains as to what would be their attitude towards Bengal. The Finance Member modified his original proposal and stated that he would give to Bengal half of three-fourth of the Jute Duty, due to the fact that he expected Match Excise revenue for 8 months out of 12. But there was a rider attached to this announcement, namely that if conditions were otherwise favourable Bengal may get even half of the Jute Duty.

* * *

The above, of course, pre-supposes that Bengal has, on her part, fulfilled the condition laid down for the grant of this concession. She was to make a very earnest effort to put her house in order and convince the Central Government that she has done so. Sir James Grigg visited Calcutta for this purpose and, no doubt, made himself familiar with all that was happening there. He certainly came back with the feeling that Sir John Anderson's Government were very earnest about the matter and hoped to show the expected results.

* * *

This personal assurance is, however, not enough. The Government of India have to be satisfied with facts and figures that all that could be done has been done. Such a letter has not yet been received from the Bengal Government ; and until that communication is received, the question of paying Bengal her share of the Jute Duty would be left pending. It is expected that the Bengal Government will expedite matters and thus earn the reward that has been promised by the Central Government.

* * *

Sir James Grigg is away and has, no doubt, had his talks with the Bombay magnates. I am told that some of them were determined to give him "a bit of their mind" regarding the Reserve Bank. It is as well that some plain speaking is indulged in on such occasions. That is the only way to create proper understanding ; and Sir James Grigg loves to hear all that can be said in opposition to his schemes.

* * *

I am told that the Government of India are busy seriously discussing the future administrative arrangements in the Central Secretariat. Hitherto Departmental heads were generally Service men and the practice of appointing Secretaries for a term of three years was considered quite efficient. This practice gave the Services a chance of getting these prize posts by rotation ; and a larger number of them filled them than would be the case if Secretaries were permanent fixtures.

* * *

Of course, some of them proved exceptions to the rule. For instance, Sir Arthur MacWatters was for three years Finance Secretary. Then he became Industries Secretary and again Finance Secretary. Sir Earnest Burden was Army Secretary and then became Finance Secretary. Sir Alan Parsons, too, has been in the grade of the Secretary for almost ten years.

* * *

The question is now being considered from the constitutional point of view and already a great deal of spade work has been done in this connection. The point that is being emphasised is that when Ministers will be in charge of Departments, the administrative heads must be permanent men who could carry on the Department with a continuity of policy which may be destroyed if the existing system of tenure continues.

* * *

In England, for instance, there is a Permanent Under-Secretary of State in every Department. These are drawn from the Home Civil Service and are permanent fixtures in their appointments. Some such system may have to be introduced in India as a necessary preliminary to the introduction of responsible government.

* * *

It may be that as the new system of government will not be altogether responsible, the proposed change may not be introduced in every Department at the same time. But there are some Departments where such a change may be considered urgent. For instance, the Finance Department would need a Permanent Finance Secretary. The work of this Department is so specialized that a Secretary hardly gathers all the threads during the three years and by the time he does it, he is asked to give place to another.

* * *

Another point in favour of a change in the existing practice is that a Finance Minister may not often be quite well up in the technique of the Department and he would need the advice and assistance of a permanent Secretary who knows the whole organization.

* * *

If this question is taken up in right earnest by the Government of India, Sir James Grigg's advice should prove most valuable. He belongs to the Home Civil Service and has had experience of the British system. He has a mind of his own and has the reputation of taking quick decisions. His presence in the Cabinet should ensure a very thorough appreciation of this problem and should lead to a practical solution at an early date.

* * *

I may suggest that as this practice would involve an important change in the existing procedure Government should formulate their views on it soon and place them in the form of a resolution before the Legislative Assembly for their approval.

"HILL-BIRD".

SOUTH INDIA

RUBBER RESTRICTION IN THE MELTING-POT ?

(From our Correspondent).

Madras, November 6.

One of the most important developments in South India came to light immediately after the last "South India" letter was mailed. The Rubber Growers' Association in London have denounced the agitation in South India for an increase in the quota of her rubber exports. The Association have cabled to the South Indian Rubber Licensing Committee that in regard to the fixation of quotas their opinion is "that relative justice has been done as between South India and other countries." It is not known whether the Rubber Growers' Association have dealt at length with the merits of the question. It is possible that the Association have been led solely by a feeling of nervous concern for the whole scheme of restriction. For they point out that, "if South India persists in its claim, other countries with equal or better reason will make a claim for an increase in their quotas and the rubber regulation will be in serious danger of being terminated;" and the Association "cannot identify themselves with an action which may have such serious consequences." But possibly, the Association are fully conscious of the strength of the case and the demand for a revision of the quota, though they talk highly of equal or better claims on the part of other countries who are a party to the restriction agreement. For a desire to wash their hands of the present agitation is seen in the concluding portion of their cable to the Committee, in which they say that "if despite our warning Southern India is determined to prosecute its claim, then please address your representation to the International Rubber Regulation Committee." The Rubber Growers' Association have had to take this attitude because even the Indian Rubber Licensing Committee, which were formerly opposed to the agitation of the Planters, have now admitted that the data on which the decisions of the International Conference were made were incorrect. In a press communique published last week, the Committee point out that they have been informed by the Rubber Growers' Association in London that the quota for South India was calculated as follows:

(*a*) Average Exports for the years 1929-32; (*b*) Allowance for immature areas planted in 1925 and after; (*c*) Ex-gratia additional allowance. The statistics used for the calculations were based on the figures taken from the Blue Books issued by the Commerce Department, Government of India, entitled "Indian Rubber Statistics."

The Rubber Licensing Committee now acknowledge what has been a matter of common knowledge for a long time that the exports from the port of Alleppey were omitted, and that the official acreage figures which, according to the Indian Rubber statistics for 1932 are 70,986, are actually 127,058 acres leaving a shortage of over 56,000 acres. The Ex-gratia allowance are stated to be 4,500 tons over the period of restriction. The following is the acreage revealed by assessment with dates of planting.

	Acres.
Before 1925 ...	64,551.21
1925	20,657.00
1926	19,795.34
1927	13 777.48
1928	5,545.84
1929	1,523.25
1930	667.93
1931	465.04
1932	74.61
Total ...	1,27,057.70

Considering these material defects of the data together, it is well to give here the calculations now made out by the Indian Rubber Licensing Committee.

The allowances for the immature areas from 1925 at the crop rates included in the rules of the Government of India Bill for estates without proved figures are as follows:—

	per acre.
1926 Planting or earlier ...	230 lbs.
1927 Planting ...	150 ,,
1928 Planting ...	100 ,,

This gives the following allowances for immature areas:—

	Tons.
1934	5,324
1935	6,008
1936	6,269
1937	6,359
1938	6,397

The quota rates based on exports and immature areas only should therefore be:—

		Tons.
1934	(*a*) Average exports from British India 1929-1932	4,170
	(*b*) Average exports from Alleppey ...	1,108
	(*c*) Allowances for immature area ...	5,324
	Total ...	10,602
1935	(*a*)	4,170
	(*b*)	1,108
	(*c*)	6,008
	Total ...	11,286
1936	(*a*)	4,170
	(*b*)	1,108
	(*c*)	6,269
	Total ...	11,547
1937	(*a*)	4,170
	(*b*)	1,108
	(*c*)	6,359
	Total ...	11,637
1938	(*a*)	4,170
	(*b*)	1,108
	(*c*)	6,397
	Total ...	11,675

It should be noted that these figures do not include any amount on account of Ex-gratia allowances. The Committee have at last come round to the view that the large drop in exports in 1932 makes the period chosen very unfavourable to South Indian interests and they now acknowledge that a fair and reasonable quota for South India would be:

	Tons.
1934	11,000
1935	12,500
1936	12,500
1937	12,500
1938	13,000

It is to be wondered whether the conclusions of the Indian Rubber Licensing Committee make any large difference in the position and prospects of the South Indian rubber industry. One would have thought they would; but the Rubber Growers' Association in London have already discountenanced the demand and have suggested that the Indian Committee do not address them any more on this question. And, what is worse, the fear that other countries also would proceed to present statistics in support of a revision of the export quota would

THE GATEWAY OF INDIA

(FROM OUR CORRESPONDENT)

Monday, November 5.

Although December is supposed to usher in the season of peace and goodwill, November is acquiring the enviable reputation of being the month of Armistices. With bitter voices prophesying war, the Empire still observes the brief sacrament of memory on November 11. Another small triumph was scored by the penultimate month of the year when the freight war between rival steamship companies came to an end on November 1.

Under the new agreement the British India Company will allow the Asiatic Steam Navigation Company 14.5 per cent. and the Scindia 40 per cent. of the tonnage reserving for themselves 45.5 per cent. The freight will accordingly go up to its old level of Rs. 7-12 per ton from next week from the very low level of Rs. 2-8 that is prevailing now.

The Indian Coastal Traffic Agreement is really part of a more elaborate Agreement, which has been arrived at between the principals of the British India Steam Navigation Company and the Asiatic Steam Navigation Company in London. On receipt of a cable from London that a settlement had been reached with regard to non-Indian waters the more obstreperous branches in India decided to ratify the Agreement regarding the Indian Coastal traffic.

The settlement has not come a day too soon. One would suppose that there was a logical conclusion to all rate-cutting competitions. But from the way these rival carrying companies were going on, utterly oblivious to the serious injury they were causing to the railway industry, to the reputation of Bombay as a port and to the Coastal trade of India in general, one almost despaired of ever seeing the end of this business. One may feel sure that Bombay will cherish this premature Christmas present from the Steamer Companies that serve her coast.

Karachi is undergoing a beauty cure. Despite having an extensive sea beach and a climate that is wonderfully bracing compared to the severity of the winters and summers in the neighbouring cities, Karachi cannot boast of an abundance of visitors. If we leave out of account the 'hop, step and jump' visitors who choose to travel by air, the great bulk of the tourist traffic leaves Karachi severely alone. There is, therefore, a proposal to beautify Karachi and thus attract the thoughtless holiday crowd. The grim and desolate spots are to be toned down, all bare fencings are to be covered with beautiful creepers, radio sets and other modern amenities are to be installed and altogether a decisive attempt is to be made to turn Karachi into a health and holiday resort.

But all has not been as serene and peaceful at Karachi as the foregoing paragraph may imply. The strained relations between the European merchants and the Indian Merchants' Association threatened to come to a breaking point during the week under review. A complete boycott of local European merchants by Indian dealers in the matter of trade in cotton, wheat and seeds has been prevailing at Karachi and has only just been lifted. The reason was the refusal of the European merchants to agree to the appointment of Indians as arbitrators, surveyors and umpires for the settlement of disputes arising out of contracts between them and Indian merchants. This has been, for a long time, the fly in the ointment of Karachi's industrial peace. The half a dozen Indian members of the Karachi Chamber of Commerce have for many years suffered the indignity of being debarred, by statute, from becoming arbitrators in trade disputes. One clause in the contract forms, which the Indian merchants have hitherto been compelled to sign, on pain of losing their trade with Europeans, was that, in cases of dispute, the matter was to be referred only to the European members of the Chamber of Commerce for settlement. The Indian Merchants' Association have endeavoured ceaselessly to get this foolish proviso rescinded; and their decision, two years ago, not to make forward purchases from non-members was an effort in this direction. It did not then produce any tangible result. But their decision last week to suspend operations in cotton, wheat and seeds with non-members has at last produced the desired effect. Local mills have already conceded the Association's demands and the European export houses are also expected to agree. It was really deplorable that the narrow and sectarian priggishness of a few merchants should be allowed to besmirch the reputation of Karachi as a busy centre of free trade in India. Let us hope that Karachi will now proceed onwards in the path of progress without any further trouble from purblind merchants of the old East India Company variety.

Karachi has seen many a race; and she was perhaps the best coign of vantage from which to follow the fight for the blue riband (—is there such an insignia for the victor of the Melbourne Cup?) of the Air. But last week the merchants of Karachi saw a strange race—a German vessel, the "Ockenfels," racing against the Customs duties. Let me explain. The newly enhanced tariff on steel rods and steel joists comes into operation from November 1 and the "Ockenfels" which was carrying an enormous cargo of steel rods and joists—15,000 tons of steel rods and 800 tons of steel joists—was due at the port of Karachi on November 3. So she just piled up a little more coal and put a little more steam behind her pistons and steamed into Karachi harbour on the morning of October 31, to the great joy of the merchants who had thronged at the docks to see the end of the race. It would seem that there are legitimate methods of beating the Customs Department at the post.

The imp of mischief has granted my impious wish that even a textile strike should be hastened to make Bombay more newsy. The operatives of the weaving department of the Ahmedabad Ginning and Manufacturing Mill, otherwise known as the Madhubhai Mill, have been on strike since the last week end. To the insatiable curiosity of a journalistic Gulliver, it is, no doubt, an affair of the Lilliputs compared to the Brobdingnagian affairs of a year or so ago. But one must be grateful for small mercies.

The strike was the outcome of the alleged dismissal by the Mill authorities of the representatives of the Madhubhai operatives on the Council of the Labour Association. Under the terms of the Agreement between the Millowners' Association and the Labour Association, no representatives of the latter body can be dismissed without reference to the two bodies. The Mill refused; and out the operatives went.

It is probably a small affair and there should not be much trouble in finding a solution, although the Madhubhai happens to be one of the oldest and biggest mills in Ahmedabad, employing about 3,000 men. But it is true that the cotton industry in Ahmedabad has been experiencing rough weather for some time. It may be recalled that a serious dislocation in the working of the mills at Ahmedabad was avoided last year as a result of the intervention of Mahatmaji. The Millowners wanted to effect a 25 per cent. cut in workers' wages in view of the depression and contended that it was equitable on the ground of the present low cost of living. On Mahatmaji's intervention they climbed down to 15 per cent. and a further representation had the result of bringing the cut down to 9 per cent. They also agreed to abide by the decision of two arbitrators to be appointed by Gandhiji. Two arbitrators were duly appointed—Seth Chimanlal Parekh, who

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

HIGHER STEEL DUTIES

It is evident that the agitation for increased protective duties for steel did not die a natural death when the Imports Duties Advisory Committee rejected an application made to that end by a few leading iron and steel producers in June last. The agitators, whose ranks have swollen in the meantime, have returned with fresh vigour to the fight and another application is being prepared for submission to the Committee. The new application is likely to be more ambitious; and it is said that a suggestion is put forward to increase the rate of protection to as much as 50 per cent. The application covers a wide range of goods such as bars and rods, angles, shapes and sections, whether fabricated or not, and hoop and strip of all kinds.

There have been sharply divided opinions on the matter of increased protection for the iron and steel industry of Great Britain. The stock argument is that, unless the import of foreign steel into England is reduced to a minimum by higher protection or other devices, the iron and steel industry of England will not achieve the necessary internal stability, on which the fortunes of the nation, to a not inconsiderable extent, depend. The present rate, which is considered high enough has failed to arrest the influx of foreign steel in the British market. The Imports Duties Advisory Committee suggested at the time of deciding on continuing the present duties *sine die* "that the present level of imports was only being maintained to retain a footing in the British market against a possible future decrease in duty". But there are no signs so far to show that British steel is safely entrenched even in the internal markets.

The no-changers are equally emphatic in their contention that a higher dose of protection would be injurious to the industry. A raising of the duty would necessitate the raising of the tariff on a wide range of finished goods, and this would cause a dislocation in the general domestic price level—certainly a serious cause for alarm. It would also check the expanding activity in the fabricating and manufacturing industries, which are large consumers of steel. The present scale of duties and prices "leaves an ample margin for steelmaking companies operating efficient plant, particularly, where they carry out finishing operations as well as the manufacture of semis". It is also a peculiar paradox that the large steelmaking companies, which operate in the heavy branch of the industry and which consume nearly 60 per cent. of the steel imports, are the most eloquent about the need of higher protection.

Some leading members of the British Iron and Steel Federation, notably Sir William Larks, the Director, have advanced a novel proposal. They have suggested that the full control of the iron and steel import trade should be in the hands of the Federation as representative of the executive group in the ferrous industries. The Federation might then, by importing certain tonnages of steel goods at lower rates than the prevailing duty, under a license from the Government, derive large profits which could be devoted to providing subsidies for iron and steel exports. It is obvious that the higher the duty, the larger is the margin of profits which the sponsors of this scheme claim to be able to make. A judicious exercise of this prerogative of discrimination would be, according to this school, a useful bargaining weapon in the hands of the industry.

It would, perhaps, be well to sound a note of warning at the outset before any new-fangled and extra-industrial schemes are seriously contemplated. Discrimination is a dangerous and highly explosive idea to play with and a Government lending its support to a discriminatory industrial policy will quickly find itself surrounded by other angry and protesting Governments demanding immediate redress. It is, however, hardly likely that such a scheme would ever be found workable. The British and the Continental steel producers will never agree to the controlable import quota, for one thing.

The whole matter is, however, at the academic stage and, for the present, the iron and steel industry of England continues to show an increasingly higher rate of output and the leading iron and steel companies continue to earn larger and larger profits.

The Coal Industry

There is a distinctly brighter outlook in England's coal industry. This is all the more gratifying because even a short time ago British coal looked blacker than it is. Not only was the competition of foreign coal producers slowly assuming formidable proportions, but internal disorders in the coal areas were gradually acquiring an unwholesome flavour. Poland has been successfully making dangerous inroads into Britain's coal trade, especially in the Mediterranean markets; and the endless squabble over hours and wages in the Welsh coalfields has so far prevented Great Britain from pressing her claims whenever trade agreements have been attempted.

Mr. Ernest Brown did a good day's work when he successfully intervened in the Welsh dispute. The case of the disgruntled miners for an increase in wages has been placed before the newly formed Arbitration Board consisting of Viscount Bridgeman, Sir David Shackleton and Mr. L. A. P. Warner, and a decision on the minimum and subsistence wages will shortly be arrived at.

Good progress has also been made in the meantime by the Coal Mines Re-organisation Commission in their efforts to bring about an economic and co-ordinated selling policy, and otherwise to achieve the economic working of mines. The Lothian district has already agreed to a voluntary scheme that will come into operation as from January 1. A voluntary scheme for selling is already operating in N. Staffordshire and efforts are being made to establish a central sales organisation in the Lancashire District. An elaborate scheme for setting up a central authority in West Yorkshire "to co-ordinate selling policy, to administer a fund raised by a levy on members for the purchase of pits with a view to closing them or for other purposes, and to make rules for the disposal of surplus quota tonnage" is nearing completion and will shortly be submitted to the Board of Trade. A similar voluntary scheme put up in November last was opposed by 30 per cent. of the W. Yorkshire coal-owners and the present scheme is the first compulsory scheme of its kind. It is a gratifying sign that an industry in England is beginning to realise the need for reform to the extent of submitting to compulsion. The plan of the Coal Mines Re-organisation Commission is really more ambitious. It envisages the possibility of bringing all four great northern coal districts, namely, Durham, Nottinghamshire and Derbyshire, South Yorkshire and West Yorkshire, under a uniform scheme of selling and marketting efficiency.

The Boot and Shoe Industry

Trouble has been brewing for a long time in the Boot and Shoe industry. One would think that the menders of worn soles would be above the petty squabbling of the market place. But the manufacturers and the operatives have been at it for some time and the prospects of reaching an agreement cannot be said to be bright. The handiness of the missiles in the event of a free fight does not, it is said, enter into the seriousness of the situation.

The position is this: The Boot Manufacturers' Federation and the National Union of Boot and Shoe Operatives in London arrived at an Agreement some time ago to conform to certain minimum wage and

Air Mail Week

other formulas. The Federation have given the requisite six months' notice to end the Agreement by the end of November. They have also proposed a new Agreement which has, however, been flatly thrown over by the Union.

The previous Agreement was found unsatisfactory for several reasons. Neither the Federation nor the Union are completely representative of the industry. The Federation accounts for 55 per cent. of the total production and the Union includes only 73,664 out of 108,000 employed in the industry. As a result, though members of the Federation are bound by the minimum wages clauses of the National Agreement, their non-member competitors are not, and are thus able to undercut. This unfairness, so the manufacturers claim, is accentuated by the willingness of the Union to allow its members to work in non-federated factories at rates below those enforced under the agreement. The Federation have now proposed that the new Agreement, if arrived at, should be made binding on all manufacturers by an act of Government. But the Government are unwilling to interfere at the instance of two unrepresentative bodies.

An actual *impasse* has been reached, and unless an Agreement of some sort is arrived at quickly, the industry will be laid bare to the danger of frequent strikes.

U. S. A.

PRESIDENT'S ADDRESS TO BANKERS

President Roosevelt's speech to the American Banker's Association, which was awaited for a long time not only by American bankers and the American business community, but probably by the whole world, has at last come. Though the President has not laid bare all his plans and motives, the speech can hardly be called a disappointment. It is generally agreed that he has gone as far as policy would allow him and that it is not only futile, but unfair, to expect the head of the American Administration to afford clearer indications of what he might be doing in regard to the major questions before him. It is not to be expected that the American President will appear before the bankers of his country and admit all of a sudden that his monetary experiments of the past were utter failures, and that, he is going to turn a new leaf. This could not be even if the monetary experiments were actually failures. But with such success as has attended some of the measures and with the undoubted necessity of Governments covering up their failures, all that one can expect of the President is to give some indication of the change that is coming over his outlook on affairs in general.

There can be no doubt that Mr. Roosevelt no longer regards sensational changes in currency and exchange as capable of bringing about the recovery, for which he is so arduously working. Perhaps, it is truer to say that he does not think that the depreciation of currency or exchange will any longer act as an impetus towards recovery. In other words, Mr. Roosevelt does not come before the bankers as a penitent. He does believe that the monetary experiments he had carried on in the past were largely successful and that, even while he was effecting changes in currency, he had constantly kept before him the objective of greater steadiness of prices and values as a national policy; and he is glad to note "the growing appreciation by other nations of the desirability of arriving as quickly as possible at the point of steadiness in prices and values". This emphasis of steadiness has, indeed, a great value, especially as it comes close on his speech of a fortnight ago when he mentioned that stabilisation could not be undertaken until the prices of certain unnamed American commodities had reached a more desirable level.

The contrast might, perhaps, suggest a final abandonment of the ideas of further cut in the value of the dollar and some opponents of inflation consider that the President is slowly veering round to that view. But it should not be difficult to see that there is not much warrant for such an opinion. It is still reasonable to believe that the President would like to brandish the weapon of further devaluation in the face of American bankers, who have been singularly innocent of hearty cooperation with the President in his task of bringing about the recovery. If one might read between the lines of President Roosevelt's speech, one might say that the President regards it as the first requisite of success in the present stage of the recovery programme that the American bankers should take to lending more freely than they have done hitherto, and gradually relieve the Government of the responsibility which they have taken upon themselves of lending capital to those whose propositions would not be acceptable to bankers in the attitude which the latter retain at present. The stimulation of activity in the business world can come only when bankers adopt a more liberal attitude to the proposition that came before them, and it is to this object that President Roosevelt's speech was largely devoted. Mr. Roosevelt is, at the moment, very conciliatory in his address to the bankers. Instead of making categorical demands to the American banking community, he prefers to state that "he had found agreement among bankers that the Government Emergency Credit Agencies should continue to lend until the banks were able and ready to take over these lending functions." "When that time comes" continues the President. "I shall be only too glad to curtail the activities of those public agencies in proportion to the taking up of slack by privately owned agencies".

There is no mistaking the meaning of these words. It conveys a distinct suggestion that in pursuing their present policy the bankers have failed to do their duty by the country and, so long as they are conservative in lending, the Government have ample justification for persisting in the policy of finding money for industry and business through the Emergency Credit Organisations. It is necessary to see where these lines of reasoning leads us to realise the full gravity of Mr. Roosevelt's address. If it is granted that if a bank did not lend, this function might immediately be taken over by Government agencies, and it will follow that, if Government's agencies cannot lend except by introducing a certain amount of inflation, the inflation would be as legitimate as the assumption of lending by Government. If, therefore, the banking community wants the Government to abandon inflation, the only way the bankers can persuade the Government to do so is to restart relending to the extent that the recovery of national economy requires. The President is quite clear that till bankers start relending, the Government would not desist from a policy they have outlined for the Government's Credit Agencies. It is only by interpreting his speech in this way, that one can understand the full significance of what follows: "To-night I ask the bankers of this country to renew their confidence in the people of the country". And the sting is at the tail: "I hope you will take me at my word". The penalty of failure to take him at his word is obvious.

The effect of this plain but courteous speaking is seen in the comment of American bankers on the tone and temper of the President's address. Mr. Francis Law, the President of the Contention, declared: I feel that bankers can do their part by giving proofs of their confidence. Banks are not greatly disturbed by the unbalanced budget and there are no more fears of uncontrolled inflation". Mr. Law is reported to have added that "the banking system can be rebuilt

Air Mail Week.

on the present foundation and though there are undoubtedly weaknesses it requires courageous attention." The American Bankers' Association passed a resolution pledging co-operation to the Government. They, no doubt, asked for a balanced budget but, at the same time, they recognise the necessity of emergency expenditure. American bankers have at last got the feeling that there can be, and should be, worked out a sound programme of mutual co-operation between the Government, the bankers and the other groups named by President Roosevelt constituting real contribution to recovery.

If the bankers are feeling glad about the indirect assurance that there will be no further inflation, they are even more bucked up by the omission of all reference to the proposal of a new Central Bank. It was pointed out in these columns last week that President Roosevelt had decided to abandon the idea altogether and that nothing had been heard of it in Government circles for some time. The fact that President Roosevelt had nothing to say about it in his address to the bankers makes it clear that this proposal no longer finds official favour. But it has apparently been difficult for the Government to scotch these proposals altogether. It is reported that individual legislators have taken up in seriousness what the Government was only content to mention at the time and they have gone so far as to prepare bills for presentation to Congress at the next session. This circumstance made it necessary for the Government to deal with it; and it is a matter for gratification that the Government did not allow the public to remain in ignorance of their real attitude. According to reports from Washington, the Administration have decided to oppose these bills. This, however, does not mean that the Administration are of the opinion that all is well with the central banking system in America. They believe that at various points the present organisation calls for reform. Their own dealings with the Federal Reserve System during the last one and a half years of the recovery campaign have not been such as to encourage the Administration to support the federal reserve system at all points. It is, therefore, quite in the fitness of things that the Administration should avail itself of opportunities for effecting the reforms they have found to be necessary during recent years. By that is meant that they will not allow drastic changes amounting to a supercession of the present Federal Reserve Board by a new organisation. It will, of course, be for Congress to decide whether any change in the present organisation is called for. If Congress should be of the opinion that some change in the nation's banking system is necessary, the Government would be prepared, it is understood, to support legislation placing the Federal Reserve's open market operations under the control of the Federal Reserve Board instead of leaving this important matter to the management of individual banks as is at present the case. Another point at which the Government would be prepared to support a change is the method of appointing the governors of the Federal Reserve Banks.

At present the twelve Federal Reserve banks are under the general supervision of the Reserve Board. The Board itself consist of the Secretary of the Treasury and the Comptroller of the Currency, *ex-officio*, and six other members appointed by the President and confirmed by the Senate. The Board appoints three of the nine directors of each Reserve Bank. The other six are elected by the member banks who are the stockholders of the Reserve Bank of their district. Three of the member banks' appointees are to watch their interests, while the other three are representative of business opinion, and must be engaged in some industrial or agricultural pursuit. It is possible that in the future the Governors of the Federal Reserve Banks will be appointed by the Reserve Board.

FRANCE

ATTEMPTS AT REVISING TRADE

The meeting of the gold bloc countries at Brussels during this week is of importance for more than one reason. The economic developments in all the countries that belong to this group during the last few years, are mainly marked by a dwindling export trade and the trade in maintaining the exchanges. Deflation has come to be the chief feature in almost every country. France had already had more than a mild dose of it. Belgium had also embarked on the policy. Switzerland, too, has not been inactive. The problem of the Italian lira is not very different from that of the franc. The effects of this deflationary policy have also been felt by all the nations that have taken to it. The enthusiasm for bringing about a reduction in the general level of prices has been so great that the respective governments have either failed to take note of the evil effects of the deflationary policy on the nation's industry and commerce or have treated the alternative proposals lightly. The school, which has been advocating a devaluation of the currency in preference to a deflation, has been gaining strength in all these countries, and, if the present conditions are allowed to continue, this new school will in all propability make its influence felt on the executives ere long.

It is, therefore, essential that the gold bloc countries, which are experiencing the same kind of problems, should co-ordinate to devise some means by which the existing parities could be maintained without suffering handicaps in foreign trade. For it is well-known that the general price level in all the gold bloc countries has been, and is, considerably higher than the international price levels. In France alone in spite of the efforts to bring about a reduction, the results achieved have not been very satisfactory. In his study of France's balance of payments 1933, Mr. Meynial points out that prices are still 20 or 30 per cent. out of adjustment with world prices. The agreement that might be arrived at as a result of the Conference, can therefore be presented by the various governments to the nations as an alternative proposal to the devaluation favoured by some.

During the week the General Commission of the bloc concluded its meeting by issuing a protocol affirming their intention to maintain the present gold parity of the respective currencies. The protocol is signed by France, Italy, Holland, Belgium, Poland, Switzerland and Luxemburg. The two chief obstacles which may prove to be detrimental to the smooth evolution of a programme for the future are the most favoured clauses between the respective countries and the quota agreements regulating trade. If the gold bloc countries come to a decision to increase the turnover of trade between these countries, this understanding will come in contravention with the most favoured nation clause with the countries that are outside the gold bloc. These concessions will then have to be extended to these countries as well ; otherwise the trade connections with these latter group of countries will have to be completely severed, with obvious consequences. There are also the quotas to be preserved.

France has, however, promised to make some concession, if need be ,so that the Conference may be a success and some workable programme arrived at. At the time of writing it is reported that the Conference is aiming at an increase of 10 per cent. in the volume of trade between the gold bloc countries. Full details are, however, not available ; but M. Lamoureux, the Minister of Trade, has given an indication of how the arrangement will work without upsetting the quota policy. He is reported to be considering the possibility of distributing the unused quotas which are estimated in the neighbourhood of 50 million francs among the countries of the gold bloc.

Air Mail Week

One would expect this apparent success of the Brussells Conference to exercise a beneficial effect on the exchanges ; but unfortunately the franc actually showed tendencies of weakening. This may, perhaps, lead one to think that the reported success of the Conference may yet have to be confirmed ; but financial circles in France attribute this weakness to internal dissensions in the Cabinet. The political parties are holding their conferences ; and everything that is said and done at these meetings is interpreted as having a close connection with the fate of the Doumergue Ministry. The Neo-Socialist Conference has just ended its session; and it is understood that M. Marquet, the Minister of Labour, has been served with an ultimatum to retire from the party or to tender his resignation of his post in the Cabinet. It will be remembered that after the Marseilles murder some reshufflings in the Cabinet were made.

GERMANY

"EXCHANGE" OR "CLEARING" ?

The question of trade debts still appears to be the pressing problem facing the British Government. They are still undecided as to whether they should resort to the alternative scheme of adopting a full-fledged exchange clearing or allow the present Exchange Agreement machinery to continue its functions. Brought into operation on August 20, the Exchange Agreement is supposed to have been in force all these days ; but the various difficulties incidental to the working of the machinery manifested themselves almost immediately after the inception of the scheme and the British authorities were always faced with the problem of disposing of the Sondermarks that accumulated at the credit of the special account. The limit of five million marks fixed by the Agreement was more often than not, exceeded and the Reichbanks, in accordance with the provisions of the Agreement, had once suspended contributions to the special account. The attempts subsequently made by the British authorities to revive the Agreement, by extending the scope of the uses to which the Sondermarks can be put to and thus facilitating the quick disposal of the accumulated currency, have been successful for the time being only in keeping the machinery just in working order. Though the amount of Sondermarks disposed of every week after the revival of the Exchange Agreement machinery has increased it cannot be said that the balances were completely wiped out. In fact they were kept below the maximum limit only with the greatest difficulty. On the evening of October 17, the Board of Trade announced that the unsold balance in special account amounted to Rm 5,600,000 approximately. The amount notified to the Reichsbank and awaiting transfer to the special account at mid-day on October 17, amounted to Rm 11,400,000 approximately. Sales of sondermarks between October 15, and October 17 inclusive, amounted to Rm 1,027,000. It will thus be seen that the demand for Sondermarks has always been considerably below the required level. The complications and intricacies of the various transfer regulations adopted by Germany during the past months have proved very difficult of comprehension to the Britishers. In addition to an official delegation under the leadership of Sir Frederick Leith Ross, an unofficial delegation of prominent London businessmen visited Berlin. The visitors of course stayed in the Reichs capital and have now returned to London. No doubt they have had first hand information about many details and the report submitted by them to the Brit'sh Government forms interesting reading. It is also believed that based on this report, the English authorities have decided as to the manner in which the Anglo-German commercial relations should be conducted. But no official announcement is yet made ; perhaps necessary instructions have been issued to Sir Frederick Leith Ross, who is to leave London this week, for Berlin to open negotiations. But certain statements made by the officials of the Board of Trade on the occasion give some clue as to how the official mind works.

Mr. Runciman, the President of the Board of Trade, issued a letter for circulation among all chambers of commerce. The letter is couched in terms of utmost urgency, begging traders to make greatly increased use of Sondermarks in their commercial dealings with Germany. He points out, that the Exchange Agreement has enabled a substantial quantity of goods exported to Germany to be paid in sterling. It is therefore of real importance, in the interests of those who export goods to Germany, that the Agreement should be made to work more successfully. He has also pointed out that the demand for Sondermarks though improved considerably since the days of the Agreement is not nearly large enough. He therefore makes an earnest appeal to all importers who have to make payments to Germany, under the Agreement, to make such payments whenever possible in Sondermarks.

This urgent plea for an increased utilisation of the Sondermarks would seem to suggest that efforts will be made to work the Exchange Agreement successfully. It is also understood that Sir Frederick Leith Ross, when in Berlin on the first occasion, pressed the German Government to compel German exporters to Britain to invoice their goods in Reichsmarks in future, instead of in sterling as has hitherto been the case. The last cabinet meeting was held just prior to the issue of the circular letter to the Chambers of Commerce and the next Cabinet meeting will not be before at least two days after the official delegation have opened negotiations with the Berlin authorities. It therefore appears that the Cabinet have deided on a continuance of the present Agreement.

On the other hand, Mr. Tharks who also went to Berlin as a representative of the British Standstill creditors, has now returned after rapid negotiations. He is reported to be busy working out the position which his constituents will be placed in, should an Exchange Agreement be established. He is also understood to be examining the possibilities of a clearing system. Advocates of a full clearing system interpret Mr. Runciman's frantic appeals for wider use of Sondermarks, as just an attempt to clear the special account before the clearing system is finally set up ; but from the standpoint of the authorities, they have never been very enthusiastic about clearing even from the very beginning. In spite of the vigorous campaign in the Press advocating clearing, the authorities have never been able to find a smooth way of distributing the proceeds among the various interests. There are the standstill creditors and holders of governmental bonds and the traders with their dobts frozen. There are those whose current debts are not easy of realisation and those shippers and insurance houses, whose claims amount to not an inconsiderable sum. Apart from the question whether a clearing scheme will work satisfactorily, which is doubted in certain quarters, the problem of the priority of these creditors in regard to the available sterling would well nigh be impossible of solution. In these circumstances, it appears that a very greatly elaborated Exchange Agreement, possibly with some particularly surprising factors may be set up instead of an Exchange Clearing system.

This view receives further suport from the recent announcement regarding payment of the October coupons of the Dawes plan. Pending an announcement by the Trustees of the Dawes loans, the Bank of England have been authorised by the British treasury to give notice that the coupons due for payment on October 15, should be lodged as usual with the paying agents of the various issues. Holders of coupons of Bonds of the sterling issues in the beneficial ownership of "British holders" as per clause 2 by the Transfer Agreement, may obtain payment in full by presenting the coupons at the Bank of England.

INDUSTRIAL CONDITIONS IN JAPAN

DUMPING OR EFFICIENCY

An authoritative report on industrial conditions in Japan which at present loom large on the international industrial horizon is reproduced in the "News Bulletin" of October issued by the International Labour Organisation of the League of Nations. Japan's phenomenal invasion of foreign markets has dislocated where it has not dissipated many a stabilised home industry. Dumping or efficiency, according to their relatibe interests, is the explanation offered of Japan's economic drive. The latter view was ably presented in a recent address at the Calcutta Rotary Club by Mr. M. Senda of Messrs. Senda & Co. (India) Ld.

Mr. Fernand Maurette, Assistant Director of the International Labour Office, visited Japan to study conditions in a number of representative industrial establishments. His report contains valuable first-hand information which gives a clear idea of the factors, economic, legislative, mechanisation and social, which contribute to Japan's amazing industrial success.

Mr. Maurette visited 22 establishments representing sixteen different industries including textile industries which have assumed such an important place in Japanese export trade in recent years. In 1933 the export of cotton goods was the second largest export of the country, and amounted to 20 per cent. of the total exports, coming immediately after raw silk. A large cotton-spinning factory in Toklo, containing 97,736 spindles and 8,000 looms, was found to be highly mechanised. Of the 2,000 workers employed, 20 per cent. were men and 80 per cent. women. Girls were observed supervising thirty, forty, and even sixty looms, and some workshops seemed to be almost empty of workers. In the cotton spinning industry there has been both a decrease in the hours of work and an increase in output. Government statistics show that from 1922 to 1926, with an average eleven-hour day, the annual output per worker rose from 12 to 14 bales. From 1927 to 1930, with a working day of ten hours, the output rose from 15 to 18 bales. After the reduction of hours to eight and a half in July, 1930, the output rose to 20 bales in 1931 and 22 bales in 1932. In the weaving industry, where hours of work have been progressively reduced concurrently with hours in cotton spinning, annual output per worker rose from 1,800 yards in 1922 to 2,500 yards in 1927 and 5,000 yards in 1932.

In an iron foundry with an annual output of over 75,000 tons of iron tubing, Mr. Maurette was struck by "the highly developed rationalisation and the detailed organisation of the division of labour, the result of which is that no minute of the time of any worker is lost, and that the rhythm of the work, without being overdone, produces the highest output."

Striking progress has been made in the production of sheet glass. In 1909 Japan produced only one-ninety-sixth part of the sheet glass required in the country. To-day she has become a large exporter and occupies third place in world production, producing more than one-seventh of the world total. The industry is highly concentrated, 88 per cent. of the production being supplied by a single company with three large factories. The "Fourcauld" system is employed. Work is continuous and is organised on the three-shift system.

The match industry, after a temporary setback in recent years, is now developing again, and exports are increasing considerably to all countries bordering on the Pacific Ocean, to the Philippines, to the Dutch East Indies, and even to Europe and eastern America. In this industry also, Mr. Maurette observed, a high degree of mechanisation, and in the case of the few operations still carried out by hand, such as making up boxes into packets, he was impressed by "the extraordinary rapidity of work, which almost resembles the manipulations of a conjuror."

In the case of the pottery and porcelain industry, the report contains an interesting account of conditions of work in the small workshops supplying goods to a large factory: "The central factory derives its supply through orders addressed to a middle-man, who divides the work among the various small workshops in the district. The price is fixed in advance between the factory and the middleman, not on the basis of the cost of production, but on the basis of a predetermined selling price. The middleman retains part of this price as his own profit. The remainder goes to the workshop to which the order is given. There is thus a fixed sum for that workshop. When the price of raw materials furnished by the middleman rises the amount available for the wages in the small workshop falls. The consequence is that at certain times and in certain small workshops, wages are much lower than in the large factory where, owing to mechanised mass-production, the price of raw materials plays a smaller part. In order to produce a sufficient quantity of articles to earn their living, the workers in these shops are obliged to labour long hours, and as much as twelve hours for adult males in certain cases was mentioned."

The electrical industry has made tremendous strides in Japan. In addition to the home market—which is considerable, since even the poorest houses have electric light—exports have progressed enormously. The number of electric bulbs exported has increased in ten years in the proportion of 1 to 21, while the price of the exported bulbs has fallen by nearly two-thirds.

The report gives an interesting table of the hours worked in the establishments visited. Actual working hours were eight per day in about half the cases. In the textile industry the ten-hour day, at least for men, remains in force in a certain number of weaving factories (nine or nine and a quarter hours in certain others), although in spinning sheds the eight and a half hour day is in force. In medium and smaller workshops the hours are longer, but Mr. Maurette points out that from the standpoint of competition on the foreign market it should be noted that while Japan exported cotton goods to the value of 323 million yen annually on the average during the last few years, the export of yarn produced in small workshops did not exceed 1 million yen. Accordingly, it may be said, first, that cotton exports do not depend upon inferior conditions of work, and secondly that if conditions of work were improved in the smaller workshops Japanese exports would not suffer.

Mr. Maurette found nominal wages to be generally low—*e.g.* 1.50 yen per day for males and 0.80 yen for females in the cotton-spinning industry—but the cost of living is also low. The ordinary articles of food have not become dearer since the fall of the yen. In some of the establishments visited, three sufficiently substantial meals a day were supplied to workers at a total price of about 3d. As a result of strong Government action, the cost of rice is the same as it was three years ago when the yen was at par, although it has now fallen to one-third of its previous value. Though the cost of living in the course of the past two years has shown a slight tendency to rise, the purchasing power of the workers has not fallen but has even risen slightly.

On the question of the efficiency of the Japanese workman, Mr. Maurette says: "I was constantly struck by the rapid and indeed brisk way in which the employees worked, with the result that the output per worker is high." He considers that the increased efficiency of the Japanese worker in recent years, while due to some extent to the improvement of equipment and mechanical methods, is also partly due to the general and thorough application of carefully studied methods of organising work in such a way as to produce the maximum output with the minimum expenditure of effort as well as of strengthening the muscles and general health of the worker by means of a well-balanced diet.

The final section of his report examines the charge of "social dumping" which has at times been levelled against Japanese industry. His conclusion is: "If, by analogy with commercial dumping (an operation which consists in exporting goods at less than the cost of production plus a fair profit, and at the same time selling the same goods on the home market at a higher price than the cost of production plus a fair profit) social dumping is defined as the operation of promoting the export of national products by decreasing their cost of production as the result of depressing conditions of labour in the undertakings which produced them, or keeping those conditions at a low level, if they are already at such a level, it may be stated that social dumping, defined in that way, does not exist in Japan.

The absolute and relative extent of Japanese export trade is the subject of a good deal of misapprehension: "If the value of the foreign trade of the principal industrial Powers in 1933 is calculated in the same currency, the American *gold* dollar, it will be found that the foreign trade of Japan represents 3 per cent. of world trade, whereas the foreign trade of Great Britain represents 12 per cent., that of the United States 12 per cent., that of Germany rather less than 9 per cent., that of France rather less than 8 per cent., and that of Italy approximately the same as that of Japan."

"Account must also be taken of the economic position in which Japan is placed owing to the fact that it can be only a manufacturing country and cannot develop industries producing raw materials or those partly manufactured goods which can be produced only in countries which are rich in fuel and raw materials. In 1933 Japan's coal production represented 3.2 per cent. of the world production, its

Clive Works, Calcutta. **Mulund Works, Bombay.**

oil production 0.10 per cent., and its cast-iron production .3 per cent."

The initial cause of the rapid expansion of Japanese export trade was undoubtedly the fall in the value of the the yen ; but, Mr. Maurette points out, this is an accidental and temporary factor, and while it may encourage exports it bears heavily on imports. The ultimate cause is undoubtedly to be found in commercial and technical organisation. "Commercial organisation enables small undertakings to have recourse to central bodies for orders, raw materials, the centralisation of the goods manufactured, in some cases the final stages of their manufacture, and their export. Industrial organisation consists in reducing costs of production by mechanisation and by the use of the most modern and improved methods of manufacture. This is the result of the fact that many of the large Japanese undertakings are of recent establishment and therefore have neither old premises which they hesitate to rebuild, nor old machinery which they hesitate to replace."

Mr. Maurette's final conclusion is as follows: "All that I saw in Japan and all that I heard seemed to me to be a fresh confirmation of the great truth that all economic and technical progress must necessarily, sooner or later, be accompanied by social progress, and that social progress, once it has been realised, does not impede economic and technical progress, but rather promotes it."

SOUTH INDIA

(*Continued from page 1163*).

appear to be not ungrounded. There is a distinct possibility of Ceylon pressing for a revision of her quota in the same way as South India has been doing. The Rubber Controller, Mr. P. Saravaanamuttu, has said that he has been making representations to the Ministry of Agriculture and Lands on the necessity of such revision and that the Ministry would place the matter before the International Committee in London. The Committee has fixed Ceylon's basic quota of standard production for the whole of this year at 77,500 tons and for the next year at 79,000 tons and the maximum exportable quota was based on the basic quota of standard production. It is now claimed that the potential yield of Ceylon, which is the same as the standard production, is about 105,000 tons and 106,000 tons respectively, and that the International Committee had not the correct data before them when they assessed Ceylon's standard production. It would be an unenviable predicament for the International Committee, if they were obliged to open up all the questions which they had good reason to regard as settled. But now the failure of the Rubber Conference to agree on the amount of restriction for 1935 would seem to have thrown all the questions into the melting pot. There has been no agreement between the Dutch and the British; and the mood of utter despair, in which the Conference dispersed, hardly bids fair for the continuance of the International scheme of restriction.

It would, indeed, be difficult to speculate on what would happen if the present policy of disintegration would continue. But on the supposition that the difficulties of fixing the 1935 percentage will not be insurmountable, it should not be beyond the powers of the International Committee to do justice to South India and such other countries as may have had a similar misfortune. It is not for us to pass any hasty judgment on the claims that Ceylon might put forward, but South India should have no hesitation in saying that, if there is such a large discrepancy in figures Ceylon is entitled, just as well as South India, to a revision of her quota. As for the fears of the Rubber Growers' Association in London, one can only say that it is too much to expect of any trade—least of all a trade so hard hit as rubber—to continue to work a scheme which is based on injustice to lots of growers. If, as the Rubber Growers' Association apprehend, there is the possibility of other countries coming up with as good or even better claims than South India, then it would only mean that the restriction agreement arived at this year hardly deserves to be called as such and that the sooner it is scrapped the better for the trade. One may also add that, once rubber has come to appreciate the advantage of restriction, it should be easier than before to get the various countries to agree to a new understanding with an equitable quota to everyone of the producing countries.

THE GATEWAY OF INDIA

(*Continued from page 1165*).

is himself a Millowner, and Mr. Manu Subedar, the Vice-President of the Indian Merchants' Chamber. The case presented to these arbitrators was of a 9 hours' day and 25 per cent. cut on behalf of the Millowners and a 9 hours' day and 9 per cent. cut on behalf of the employees. Unfortunately, however, the arbitrators failed to agree between themselves, which is hardly to be wondered at considering that Mr. Subedar has distinctly labour leanings while Mr. Parekh has naturally his sympathies with the Millowners. Mr. Gordhanbhai Patel, Secretary of the Millowners' Association, and Mr. Gulzarilal Nanda, Secretary of the Labour Association, accordingly went to Bombay to find an umpire to arbitrate between the arbitrators. The honour of being the final arbiter goes to Mr. S. S. Patkar, a retired judge of the Bombay High Court; and it is expected that a solution will shortly be found for the long-standing dispute between the owners and operatives at Ahmedabad. Anyone, who either from ignorance or policy, trots out the complacent platitude that Gandhiji has lost his hold on the masses of India, should, if he failed to go to Worli, at least go to Ahmedabad.

Work in connection with the Reserve Bank of India has begun. A conference in this connection is going on in Bombay between the big stars on India's financial horizon. The members include Sir James Grigg, the Finance Member of the Government of India, Sir Osborne Smith and Mr. J. B. Taylor, the Governor and Deputy-Governor-designates, respectively, of the Reserve Bank and J. W. Kelly, the Controller of Currency. The air is full of speculation as to the possible future of the Imperial Bank and all kinds of plausible and fantastic suggestions are made. It is best to hold one's soul in patience and see what comes out of the conclave of the giants.

THE TATA IRON & STEEL CO., LTD.

NOTICE

TENDERS are invited for the handling of imports and exports for The Tata Iron & Steel Co., Ld. Forms of tender may be obtained on application to the General Manager, Tata Iron & Steel Co., Ld., Jamshedpur, B. N. Ry.

No one who is not a properly authorised agent under the Sea Customs Act with experience in handling large scale business need apply.

The successful tenderer will have to place, if required, a deposit of Rs. 50,000 with the Company on which interest will be paid.

No tenders will be accepted later than the 30th November, 1934.

The Company will not be bound to accept the lowest or any tender.

Tenders should be under sealed covers superscribed "Handling Tender" and addressed to the General Manager, Tata Iron & Steel Company.

A. M. HAYMAN,
Controller of Accounts,
for The Tata Iron & Steel Co., Ltd.

JUTE AND JUTE GOODS

JUTE

Calcutta, Nov. 9.

Jute goods prices continue to be low—so low indeed that a further appreciable drop seems out of the range of probability. Indian Jute Mills have increased production by the unsealing of 2½ per cent. of their looms—a factor that will sustain the low level of prices, even against an anticipated reduction in stocks through curtailment of production owing to Puja holidays. The industry as a whole is awaiting any adventitious circumstances that might induce higher prices as the margin of profit at present prices is negligible.

Half the week being intercepted by Diwali Holidays there was very little doing in the jute market during the week under review. The fluctuations were very narrow, December futures highest and lowest quotations were Rs. 27-8 and Rs. 27 per bale. There was no business to report by mills nor by shippers, except a small covering business for November at Rs. 26.

London market has ruled steady and a fair business was reported to be done at a price little over £15 for November/December. Buyers at the moment seem to have been fully satisfied. On the whole the week was very dull and featureless in spite of Diwali, when a large turnover generally takes place.

COTTON AND COTTON GOODS

COTTON

Calcutta, November 9.

The Demand for winter styles in serges, meltons, rugs and blankets continues to be the chief feature of the Calcutta market which feeds provincial centres. Deliveries of these goods from godowns and jetties are heavy. Indian mill-made cloths, particularly, standard styles of grey shirtings and dhooties, are mostly in demand, with Japanese dhooties and grey goods in the second line. Japanese fents are steadily coming into the market in increasing quantities.

Enquiries for Lancashire staple lines for forward shipment are brisk, though dealers are on the conservative side of bids in the absence of any sign of early appreciation in the level of prices for ready goods.

There are no bullish tendencies as it is now estimated on the American cotton outturn that 20,000,000 bales will be available for world requirements, supplemented by increased production in other countries estimated at 13,250,000 bales.

No special feature is noticeable in the yarn section, with prices slightly easier for 40's and 20's basis Indian spinnings.

The approach of the Diwali festival which in Madras stimulates the piecegoods market has not this year yet induced a marked activity. Large stocks of Lancashire goods are held by merchants and importers as the difference between prices they paid and prices offered is too wide for disposal, Japanese and Indian mill goods selling at cheaper rates. The usual good demand at this time from the West coast of Southern India and Madura and Tinnevelly districts is non-existant, as the continued drought over South India has ruined crops and ryots alike. Consumption of English cotton yarn is poor. Japanese spun yarns, specially 40's counts, are popular owing to cheapness. Indian 60's grey yarns are coming in for a good deal of attention.

Due to holidays and pending the American Bureau report there was very little change in the cotton market during the week. The undertone was, however, steady and prices were well maintained. Fresh speculative interest is visible at the declines. The tendency of the market is upward.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £191,938,546 on the 17th instant, showing no change as compared with the previous Wednesday.

During the week the Bank announced the purchase of £62,641 in bar gold.

In the open market demand continued to be general and readily absorbed the £2,000,000 of bar gold offered during the week. Owing to the appreciation of Sterling in terms of the gold currencies, quotations have shown a considerable decline from the high level established last week. A premium over gold exchange parities has been maintained, but this has fluctuated somewhat widely.

SILVER

Calcutta, Nov. 9.

The weakness that had developed in the silver market at the last week end due to the approach of settlement and consequent heavy deliveries was over on the report of fresh American buying in the London market. Local market has ruled fairly steady and prices have recovered by about a rupee closing at Rs. 64-14. The undertone of the market is steady. Stocks and offtake remain more or less unchanged.

London—Air Mail Week.

Although quotations have not shown very wide fluctuations, the market continued active, but with a somewhat quieter tendency towards the end of the week, when prices were inclined to sag, due partly to hesitation on the part of buyers and partly to the appreciation of sterling in terms of the gold currencies.

Sales by speculators have been a feature and, although the position with regard to China is rather obscure, some further selling from this quarter has been recorded. On the whole, the substantial offerings were well absorbed by American buying, assisted by a continued demand from the Indian Badaars.

The tone seems steady at the moment, but in the present condition of the market, further wide fluctuations are not unlikely.

The following were the United Kingdom imoprts and exports of silver registered from mid-day on the 15th instant to mid-day on the 22nd instant:—

Imports

	£
Soviet Union (Russia)	25,958

RACING COLOURS made up at the shortest notice. From Stains up the Right Shades in any combination.

SUGAR

Calcutta Nov. 9, 1934.

Last week's *Indian Finance* quoted a Gazette Extraordinary notifying the minimum price of sugar in Bihar and Orissa till December 15. Sugarcane rules which set out the method of purchase of cane by Sugar factories state that the factories situated in North Bihar would be subjected to these rules and factories in South Bihar will be exempted from the operation of these Rules. The Rules follow closely the Rules of the U. P. Government. The only noticeable difference is in regard to the establishment of an Advisory Committee consisting of an independent Chairman for the various controlled areas. Factories will be able to purchase cane only through licensed purchasing agents and the Managers of all factories who are expected to follow the rules are required to furnish security to the extent of Rs. 2,500. It has also been provided that payments for cane purchased by factories will be made within a fortnight of the date of weighment. In the H. P. Rules it was laid down that payments should be made within 24 hours, but as a result of a meeting of the representatives of sugar industry with the Hon'ble Minister recently it was decided to allow weekly payments. The Bihar Government notification regarding the fixation of cane prices seeks to fix the price of cane at 5 annas per maund up to the 15th December and 3 annas per maund for the factories working by the minimum price will vary according to the table given below, the price of cane varying directly in the given proportion with the price of sugarcane. For this purpose the price of sugar will be determined from the average of the highest quotations for first grade sugar in twelve factories.

	Average price of sugar		Corresponding minimum price of sugar-cane: Vacum pan factories	Open pan factories
	Rs. A.	Rs. A.	As. P.	As. P.

Various Railways are helping the sugar industry by offering a reduction in rate of freight on sugarcane. Recently the East Indian Railway announced a considerable reduction in the rates of freight on sugarcane amounting to over 25%. The question of a reduction of rates for sugar for long distance traffic was brought up for discussion at the last Indian Railway Conference Association at Simla and it is likely that an announcement in regard to the rate of freight on sugar will be made before long. If facilities are to be allowed for the movement of sugar particularly to distant markets, the reduction in the rates of freight is essential for sugar going to distant markets like Karachi, Madras, Calcutta, Bombay, etc. The Railways would also earn increased revenues to the extent of about Rs. 30 lakhs by allowing the movement of sugar from Bihar and U. P. to distant markets even by reduced freights.

Indian Sugars.—The Prices were nominally unchanged. There was so far no development about forward sales of Indian Sugars as quotations received from Cawnpore are not in line with Java Sugar.

Foreign Markets.—On the New York Terminal Market, there was a decline of 5 and 7 points in March and May positions respectively, while December was higher by 8 points as compared with the last week. This decline in distant positions in New York is attributed to the uncertainty about the future Cuban Sales. On the London Terminal there was a decline of 1, ½ and ½d. per cwt. in December, May and August positions respectively. Java London was reported unchanged. Java Market was reported quiet with prices unchanged. At the end of the week, it was reported that a sale of 20,000 tons Superior Java was made by the "Nivas" for India but price was not disclosed. It is understood that this sale was made by the "Nivas" on the basis of 8.20 Glds. for West Coast Indian Ports to one European Exporter in Java who has been selling since some time almost on the above basis.

Calcutta & Karachi.—Calcutta Market was reported quiet with a decline of about 1d. per cwt. in ready Java Sugar owing to reduced demand for ready. Karachi Market was reported steady for ready Java with prices unchanged. Forward positions were reported weak owing to lower advices received from Java.

Imports of Sugar in B. India.—From January to August, 1934 (8 months) were estimated at:—

1934 ... T. 132,003 (Java 94,000 and others 38,000)
1933 ... ,, 211,000
1932 ... ,, 281,000

Exports from Java.—During September, 1933, were estimated at 126,563 tons.

The tone of the market for ready and near arrivals seem to be healthy on account of stocks of Java being small while arrivals in near future are limited. As regards forward positions the tendency of the market is decidedly weak and the prices are likely to decline further from the present level when arrivals of Indian Sugars will be heavy from December onwards.

TEA

Calcutta, Nov. 9.

Mincing Lane is stagnant and the liquidation of "deceased" holdings is not yet quite finished. In view of the fact that the International Tea Committee will decide this month, on their policy for 1935, it is of interest to the present and prospective investors of tea shares to discuss the future possibilities. With the average realised for common teas in London below, for the first time, that of the previous season, it is not surprising that business in tea shares in the Calcutta market since its reopening after the *Pujah* holidays has been on a very limited scale. Just at the moment buyers are off the market and in absence of support, rather than through pressure of selling, the market has kept dull.

The tea restriction scheme has worked well. Compared with other restriction plans, internal friction has been decidedly less with more of mutual accommodation amongst its participants. As a price raising factor, the scheme has been generally acclaimed as quite a success. The question now is whether it will be as successful in future also.

In view of the disconcerting stock position and the recent slump in tea prices it is more than a possibility that the International Committee, will recommend a further cut in the exportable percentage under the restriction scheme.

The future course of tea prices depends on the future consumption of the commodity. Had the producers concentrated more energy on the consumption factor the industry might have been in a better position by now. In a way it is better that tea prices have not inordinately gone up, for, unduly high tea prices in relation to commodity prices in general cannot but adversely affect its consumption.

So far as the world consumption of Indian tea is concerned, the policy of Imperial Preference, is proving a handicap.

For example, since the fiscal year 1931-32 combined imports of Indian and Ceylon tea into the U.S.A. have fallen off by 13 million lbs. while those from non-Empire countries have increased by 8¼ million lbs. There are also indications that the preference (over and above the duty) by making tea so much the more dear to the consumers is tending to restrict consumption even in Britain. It is increasingly becoming apparent that the best interests of Indian producers are not being served by the policy of Imperial Preference.

The following are the particulars of Sale No. 21.

Tea with Export Rights.

	1934	1933
Offered	22,811	18,221
Sold	18,641	17,463

Java Tea

At the London auctions on November 1, 7,000 packages of Java and other teas (including Sumatra) were submitted for sale.

There was a good competition. Strong enquiry for tippy teas was a feature.

The following were the lowest prices fetched during the day's auctions:—

Common Pekoe last price 9d. to-day's price 9d. lb.; Common Broken Pekoe last price 8¼d. to-day's price 8¾d. lb.; Common Orange Pekoe last price 10½d. to-day's price 10¼d. lb; Common Broken Orange Pekoe last price 8¾d. to-day's price 9¼d. lb.; Common Broken Pekoe Souchong last price 9½d. to-day's price 9¾d. lb.

The following were the value prices:—

Clean Common Pekoe last price 10d. to-day's price 10d. lb.; Clean Common Broken Pekoe last price 9⅛d. to-day's price 9⅛d. lb.; Clean Common Orange Pekoe last price 11½d. to-day's price 11⅛d. lb.; Clean Common Broken Orange Pekoe last price 9⅛d. to-day's price 9¼d. lb.; Clean Common Broken Pekoe Souchong last price 9¾d. to-day's price 9¾d. lb.

Indian Tea

At the London auctions on November 5, 27,100 packages of Indian tea were submitted for sale.

There was a well distributed demand at previous values.

The following were the lowest prices fetched during the day's auctions:—

	Last auction lb.	To-day's auction lb.
Common Pekoe	10¾d.	10¾d.
Common Broken Pekoe	10¾d.	10¾d.
Common Orange Pekoe	11d.	10½d.
Common B. O. Pekoe	11d.	11d.
Common B. P. Souchong	not quoted	11d.

The following are the value prices:—

Clean Common Pekoe	11d.	11d.
Clean C. B. Pekoe	11⅛d.	11⅛d.
Clean C. O. Pekoe	11⅛d.	11⅛d.
Clean C. B. O. Pekoe	11d.	11⅛d.
Clean C. B. P. Souchong	11d.	11d.

MISCELLANEOUS

WHEAT

Calcutta, November 9.

After ruling easy in the earlier part the wheat market has been steady and prices are on balance higher over the previous week. The rise has been mainly due to reported damage to the wheat crop in Australia. The demand has, however, been poor and May Beta already commanding a fair premium over ready there is little room for any further heavy rise.

Quotations:—

Liverpool	Rs. A. P.
Rosafe Parcels	21s. 9d.
Baruso Parcels	22s. 3d.
Australian South Parcels	25s. 3d.

LINSEED

Calcutta, November 9.

Partly in sympathy with wheat and partly due to better demand for immediate goods the linseed market has ruled steady. May Beta is now quoting at Rs. 4-3-6 as against Rs. 4-1 a week ago. The exceptionally good Argentine crop is a great handicap to any substantial rise in the price of linseed.

GROUNDNUT

Madras, November 9.

A steady market showed signs of recuperation from previous falling prices. Sterling quotations rose from £10-17-6 to £11-5-0 for October shipments and £10-17-6 for November, while December shipment was firmly held at £11-10-0 sellers. January loading was done at £10-7-6, the market closing firm at £11-10-0 December sellers and £10-8-9 January sellers at the week end.

Both at Pollachi and Vizagapatam prices dropped—respectively frow Rs. 21 to Rs. 20 for "rose" variety and from Rs. 9 to Rs. 8-12-0 per bag of 164 lbs. for machined kernels, post delivery.

The market for groundnut oil has sagged further "Raichur" quality is quoted at Rs. 54, "Virudhunagar" quality at Rs. 56 and "Expeller" quality at Rs. 52 per candy of 500 lbs., loose, ex-sellers' godowns.

Groundnut oilcake is a steady market and "Expeller" cake is quoted at Rs. 55 with "Rotary" cake at Rs. 50 per ton of 20 cwts., packed in sound gunnies, free on rails Madras.

Arrivals of groundnut kernels into Madras during tse week ended November 3, 1934, amounted to 5,437 bags or 428 tons against 9,521 bags or 750 tons in the preceding week, and 10,174 bags 801 tons at the corresponding week of last year.

The exports of groundnut kernels from All-India during September, 1934, totalled 51,000 tons as compared with 28,000 tons in Septewber, 1933, and 19,000 tons in September 1932.

LONDON RUBBER MARKET

Messrs. Symington & Wilson have issued the following report: dated October 17, we were able to report a somewhat steadier tone in the Rubber Market and this continued the following day and up to Friday morning. Business was done in Ribbed Smoked Sheet on the Spot on Wednesday at 6-3/4d. and on Friday at 7-1/16d. By Friday evening the price had dropped back to 6-15/16d. at which business was also done on Saturday. On Monday the Market was easier and Spot Sheet was sold in the afternoon at 6-13/16d. This was also the opening price on Tuesday morning, but at the time of writing prices are rather steadier with buyers at 6-15/16d. Quotations for forward deliveries have followed the Spot quotation as usual.

A slightly more optimistic view of the future seems to be gradually developing in American financial circles. An improvement in retail trade is reported and several of the large corporations have reported increased turnover and profits. The attitude of the Roosevelt administration would seem to be gradually changing in the direction of allowing more liberty for individual effort and imposing rather less control. Wall Street and the chief Commodity Markets showed substantial advances yesterday. America is also buying a certain amount of actual Rubber in this Market for nearby shipment from the East. So far as Rubber is concerned, the American consumption figures are distinctly encouraging.

STATISTICAL INFORMATION

RAILWAY TRAFFIC

TRAFFIC EARNINGS AND EXPENSES

The total approximate gross earnings of all State-owned Railways for the period (13 days) ending 13th October, 1934, amount to Rs. 321 lakhs, Rs. 20 lakhs MORE than the figures for the period (8 days) ending 30th September, 1934—compared with a period of 8 days calculated at 8/13th of the period of 13 days ending 13th October, 1934—and Rs. 31 lakhs MORE than the actuals for the corresponding period of the previous year and Rs. 30 lakhs MORE than the actuals for the corresponding period of 1932-33.

The total approximate gross earnings from 1st April to 13th October, 1934, amount to Rs. 46.12 crores or Rs. 265 lakhs MORE than the actuals for the corresponding period of the previous year and Rs. 348 lakhs MORE than the actuals for the corresponding period of 1932-33.

A comparison with the figures for the period (8 days) ending 30th September, 1934—compared with a period of 8 days calculated at 8/13th of the period of 13 days ending October, 1934—for the principal State-owned Railways shows increases in the approximate gross earnings of all Railways. A comparison with the actuals of the corresponding period of 1933 shows increases in the approximate gross earnings of all the principal State-owned Railways except the Tirhoot and Lucknow-Bareilly.

The following are the up-to-date approximate gross-earnings of the State-owned Railways from 1st April, 1934, and the Working Expenses from 1st April to 31st August, 1934, as compared with the actuals of the corresponding periods of last year:—

	Earnings.		Working Expenses.*	
Railways.	Up to 13-10-33 (in lakhs.) Rs.	Up to 13-10-34 (in lakhs.) Rs.	Up to 31-8-33 (in lakhs.) Rs.	Up to 31-8-34 (in lakhs.) Rs.

WAGON LOADINGS

During the period (13 days) ending 13th October, 1934, there were loaded on the broad gauge 149,651 wagons, being 15,533 MORE than in the corresponding period of the previous year, or an increase of 11.6 per cent. On the metre gauge there were loaded 86,626 wagons, being 6.862 MORE than in the corresponding period of the previous year or an increase of 8.60 per cent.

For the period from 1st April to 13th October, 1934, there were loaded on the broad gauge 2,119,670 wagons, being 143,307 MORE than in the corresponding period of the previous year, or an increase of 7.25 per cent., and on the metre gauge 1,328,827 wagons, being 80.047 MORE than in the corresponding period of the previous year, or an increase of 6.41 per cent.

THE FIRST ALL-INDIA RICE FORECAST, 1934-35

This forecast was issued last week. It is based on reports furnished by the undermentioned provinces and States which comprise 96 per cent. of the total rice area in India. The reports deal with autumn and winter rice. The total area sown is reported to be 75,261,000 acres, as against 75,080,000 acres, the corresponding estimate (revised) of last year, or an increase of 181,000 acres only. Weather conditions have not been quite favourable, but the present condition of the crop appears to be generally good.

The details are as under:—

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Friday Morning.

There were only three days' trading in the Stock Exchange during the period under review upon which to comment, Tuesday and Wednesday being holidays owing to Diwali festival.

Government Securities.—Government Securities was rather irregular before the holidays and only a limited business was reported, but on Thursday when the market opened after the holidays, 3½ per cent. Government Paper owing to further strength of Indian Government Sterling Securities in London and speculators again taking interest. A fairly large business was reported round about the above rate. 3½ per cent. Loan 1947/50 also firmed up to Rs. 101/6 and 3 per cent. Loan 1941 to Rs. 99-8. 4 per cent. Loan 1960/70 recorded a few deals round about Rs. 107-11 and 5 per cent. Loan 1945/55 changed hands at Rs. 117/8. Medium dated Loans also kept steady. 4½ per cent. Loan 1955/60 are now quoted at Rs. 113 and 5 per cent. Loan 1939/44 at Rs. 107/12. Short dated loans, however, remained unchanged.

Fixed Interest Bearing Securities.—The enquiry for Preference shares was rather limited and there appears to be more sellers than buyers at the moment, although there was no appreciable reduction in rates. Among Jute Mills' Preferences, Hoogly 10 per cent. Preference changed hands at Rs. 21; Hukumchand 7 per cent. Preference was quoted at Rs. 117; Lawrence 7 per cent. Preference was sharply advanced to Rs. 92-4 from a quotation of Rs. 91-13 dealt in at Rs. 143 while Dalhousie 7 per cent. Preference advanced to Rs 143 from a quotation of Rs. 139. Reliance 7 per cent. Preference was marked at Rs. 143 and Waverly 8 per cent. Preference was mentioned at Rs. 59. There were rather more sellers in other Preference shares and only a few deals were reported. B. I. Corporation 8 per cent Preference were marked at Rs. 144; Titaghur Paper 8 per cent. Preference (Rs. 40 paid up) changed hands at Rs. 65 and Purtubpore Sugar 10 per cent. Preference recorded a deal at Rs. 17-4.

Among Debentures, a few deals were reported in Calcutta Municipal issues at firm rates. 4 per cent. 1930/38 advanced to Rs. 103-4 and 1909/39 remained firm at the same figure. 1906/36 was quoted at Rs. 101-1. A few Karachi Port Trust issues changed hands at full rates.

Among Industrial issues 5 per cent. 1916/45 India General Navigation was marked at Rs. 104-12 and 8 per cent. 1921/36 Titaghur Paper Mills Debentures changed hands at Rs. 105-8.

Other Investment Stocks.—Imperial Bank's shares after their recent spurt ease off further. The fully-paid-up issues can now be placed around Rs. 1,600 and Contributories are quoted at Rs. 296. Punjab National Bank (fully paids) recorded a deal at Rs. 125 and Contributories at Rs. 43. For the first time after many years business was locally reported in Lloyd's Bank Shares at Rs. 42 and Mercantile Bank's (A) shares at £32-18-8, presumably in view of the amalgamation of these two Banks with the Imperial Bank of India.

The demand for Government guaranteed Railway shares continued unabated, but only a small business was reported due to scarcity of sellers. A small lot of Burdwan-Cutwa changed hands at Rs. 85 and a small lot of Kalighat Falta was dealt in at Rs. 87. Shares enjoying District Board subsidy was also enquired for and Baraset-Basirhat found buyers at Rs. 60 while there are buyers of Buktiarpur-Behar at Rs. 65 with sellers asking a few points more. Apart from these, Hardwar-Dehra was quoted at Rs. 115 and Hoshiarpur-Doab recorded a deal at Rs. 92-8. A small lot of Mymensingh Bhairab Bazar was mentioned at Rs. 82. There are sellers of Sara Serajgunge at last levels.

Cottons.—The recent interest in cotton shares appears to have subdued and rates now ruling are below the best in the majority of instance. Dunbar (ordy.) have slipped back to Rs. 148 from a quotation of Rs. 158 while Kesoram (ordy.) remained unchanged at Rs. 4-10. Benares Cotton and Silk recorded a deal at Rs. 1-10, Cawnpore Textiles at Rs. 3-8 and New Victoria (ordy.) at Rs. 1-12. Muir Mills (ordy.) was quoted at Rs. 340 while Mohini kept remarkably steady at Rs. 11-6.

Coals.—The interest in coal shares appears to have disappeared for the time being, owing to the reported failure of the principal interests concerned, to come to an agreement in respect of prices to be quoted for the Railway Tenders for coal for 1935/36. The delay of announcing the Government of India's decision regarding the reduction of output was another factor of this apathy of operations.

Amalgamated was marked down to Rs. 21-12 on the rumour that their dividend will be the same as that of the previous half-year while market expected a dividend of Annas twelve per share. Bengal was easier at Rs. 251; Burrakur (ordy.) was back to Rs. 14-8; Equitable (ordy.) was marked down to Rs. 36-2; New Beerbhum ordinary

KARACHI MUNICIPAL CORPORATION

Tenders are invited for the Debenture Loan of Rs. 5.55 lakhs sanctioned under the Government of Bombay, General Department Resolution No. 9315, Bombay Castle dated 31st July 1934, for the execution of various Loan works bearing interest at 5% (payable half yearly) to be fully repaid at the end of 30 years.

INSTALMENTS

10% on application and the balance on allotment. The allotment money is payable within 15 days from date of intimation of allotment. The interest on 10% application money will run from the date of allotment and on balance from the date of payment.

Tenders for the whole or any portion of the loan in multiples of Rs. 500/- will be received up to 3 p.m. (S.T.) on Friday, the 30th November 1934 by the Accountant at the Municipal office, enclosed in a sealed cover superscribed "Tender for Loan of Rs. 5.55 lakhs"

Tender forms and other particulars available on application to the chief officer Karachi, Municipal Corporation.

E. D. SHROFF
Chief officer
For THE CITY OF KARACHI

Karachi, 31-10-34

to Rs. 14-12. Exceptionally, New Manbhoom kept very steady round about Rs. 49-8 on the rumour of a better dividend. Among others, Nazira changed hands at Rs. 8-4; New Tetturiya at Rs. 2 and Talcher at Rs. 2-2.

Jute.—Jute Mills shares remained steady on the whole, although profit taking was noticeable from time to time. Hessian market steady. 9 porters are now quoted at Rs. 8-12 while good business was reported in 11 Porters up to Rs. 11-2 for November/December shipment. River Plate has shown a certain amount of activity while buying order from North America are coming on a moderate scale. Stocks have again reduced satisfactorily. Jute, on the other hand, ruled quiet after the Diwali festival and are now quoted at Rs. 27 sellers.

Following the steady Hessian market, Howrahs ruled steady but fluctuation was very narrow and at the time of writing the price is Rs. 55-6. Kamarhatty also were marked at Rs. 542.

Clive changed hands at Rs. 32, Hukumchands at Rs. 14-2, Nationals at Rs. 24-4, Reliance at Rs. 77-8 and Presidency at Rs. 5-7. Nuddea are now quoted at Rs. 47-4. Anglo India was marked at Rs. 412 ex-dividend. Bally at Rs. 189; Burnagore at Rs. 161; Cheviot at Rs. 210; Dalhousie at Rs. 361; Gourepore at Rs. 599; India at Rs. 331-8; Lawrence at Rs. 515; Kinnisons at Rs. 653; Orient at Rs. 204; and Standard at Rs. 338.

Electricals.—Electric supply companies shares were less active and in the majority of instances sellers predominated. There are sellers of Agra Electrics at Rs. 126, Benares at Rs. 14-4; Jubbolpore at Rs. 13 and Upper Ganges at the same figure. Bareilly changed hands at Rs. 13-4, Bhagalpore at Rs. 9-8, Patna at Rs. 17-4 and a small lot of United Provinces at Rs. 154. Upper Jumna found buyers at Rs. 10-12. Dacca Electrics are now on offer at Rs. 20; Cuttack at Rs. 6-4; Muttra at Rs. 9-8 and Shajahanpur at Rs. 7-8.

Bengal Telephone, however, kept steady round about Rs. 17-2 without much business passing.

Engineering.—With the exception of one or two Engineering Companies' shares were also quiet. Burn & Co. Ordinary advanced further to Rs. 175 while the enquiry for Saran Engineering continues and they may be placed at Rs. 10. Brittania Building and Iron also remained steady round about Rs. 4-12. Arthur Butler on the other hand, were marked down to Rs. 13-4, Indian Iron and Steel remained quiet at Rs. 6-8, and Bengal Iron at Rs. 3-13. Kumardhubi Engineering (ordy.) was unchanged at Rs. 3-8 and Marshalls at Rs. 1-3.

Sugar.—After their recent fall, Sugar shares have recovered slightly. Cawnpore Ordinary are now quoted at Rs. 35-8, Champuran at Rs. 23-12; Belsund at Rs. 7; Carew & Co. at Rs. 20-8; New Savan at Rs. 13-12 and Samastipore Central at Rs. 12. Dyer Meakin changed hands at Rs. 92; and Muree Brewary at Rs. 205. Raza Sugar recorded a deal at Rs. 136.

Miscellaneous.—This section disclosed no fresh feature. Burma Corporation was weaker on London advices. B. I. Corporation (ordy.), however, kept steady at Rs. 2-6; Calcutta Ice at Rs. 9 and Calcutta Tramways (ordy.) at Rs. 20-4 ex-dividend. Howrah Oil remained steady at Rs. 10-5 and Titaghur Paper (ordy.) at Rs. 20-12. Midnapore Zemindary (ordy.) was marked at Rs. 72. Bengal Assam Steamships at Rs. 210; India General Navigation (ordy.) at Rs. 107 and Scindia Steam Navigation at Rs. 14-3.

As Tuesday, Wednesday and Thursday were holidays at Madras and Bombay the Stock Exchange reports for these centres do not appear.

LONDON STOCK EXCHANGE

The general tone of Stock Exchange throughout the week has been rather quiet. Except for the sagging tendency showed during the early part of the week giltedge continued firm throughout. On Tuesday there was an all-round increase in prices including Indian loans. The next day there was some falling off in demand but prices were well-maintained and Indian loans showed some further advances. Among other sections Oils were on the whole weaker. Minings were steady and Home Rails irregular. Tobaccos were quoted lower. Tea shares suffered a decline during the early part of the period but made some recovery later on. Rubbers were mostly unchanged but on Thursday showed some price advances. Other Industrials were well supported and showed an improving tendency without any spectacular advances.

COMPANY REPORTS

ANGLO-INDIA JUTE MILLS CO., LTD.

Report for the half-year ended 30th September, 1934.

These show a profit on Revenue Account of Rs. 8,80,520-9-2. On transfer of this to Profit and Loss there is a balance at credit of that Account of Rs. 10,07,525-1-11 which the Directors recommend should be dealt with as follows:—

To payment of dividends, free of Income Tax:—On Preference shares at the rate of 7 per cent. per annum (Rs. 3/8 per share) Rs. 96,677, on Ordinary shares at the rate of 30 per cent. per annum (Rs. 15 per share) Rs. 7,38,105, total Rs. 8,34,782, leaving a balance of Rs. 1,72,743-1-11 to be carried forward.

The Company's Mills continue on single shift and in accordance with Indian Jute Mills Association's Agreement are working 40 hours per week with 15 per cent. of the total looms closed off the Hessian side.

J. C. D. Nasmith, C. E. W. Price, Thos. Douglas, Directors.

Duncan Brothers & Co., Ltd.—Managing Agents.

CHAMPYDANY JUTE CO., LTD.

Report for the half-year ended September, 1934, shows after allowing Rs. 2,27,653-1-11 for Depreciation on Block, a profit for the half-year of Rs. 4,42,004-13-4 add balance brought forward from last half-year Rs. 44,067-3-8 or an amount available Rs. 4,86,072-1-0 which the Directors recommend should be dealt with as follows: Payment of Dividend of Rs. 5 per share Rs. 2,95,280 transfer to General Reserve Fund Rs. 1,20,000 total Rs. 4,15,820 leaving a balance to be carried forward of Rs. 70,252-1-0.

Buildings.—There are no additions under this head.

Machinery.—The additions to machinery consists of a Pneumatic hammer and a lathe.

Investments.—During the half-year certain of the Company's holdings in short-dated securities of the Government of India have been sold and the proceeds reinvested in 3½ per cent. loan (1947-50) and 4 per cent. Bombay Port Trust Debentures. In addition 4 per cent. Calcutta Improvement Trust Debentures have been purchased.

Working Hours.—In common with other mills in the Indian Jute Mills Association Champydany and Wellington have worked 40 hours per week during the period under review and 15 per cent. of the total complement of looms also remained sealed.

J. Reid Kay, D. J. Leckie, W. M. Craddock—Directors.

James Finlay & Co. Ltd.—Managing Agents.

NAZIRA COAL CO., LTD.

Report for the half-year ended August 31, 1934.

The working for the half-year shows a gross profit of Rs. 41,159-4-11 to which has to be added: The amount brought forward from last half-year Rs. 7,482-9-0 making a total of Rs. 48,641-13-11. After providing for Depreciation Rs. 21,503-8-10, commission to Managing Agents and colliery staff Rs. 10,298-10-9, General Reserve Rs. 10,000, total Rs. 41,802-3-7 there remains a balance to be carried forward of Rs. 6,839-10-4.

Output.—Raisings for the half-year compare with the previous half-years as follows:

Half-year ended August 31, 1934 ...	10,091 tons
Half-year ended February 28, 1934 ...	13,168 ,,
Half-year ended August 31, 1933 ...	13,303 ,,

It is regretted that owing to the annual order for loco coal having been drastically cut down and orders from the gardens much curtailed, the trading for the half-year shows comparatively poor results and it has been considered advisable to pass the dividend until demand revives when a little improvement can be expected.

Briquetting Plant.—We regret to report that as the result of our experience during the monsoon months, the binder decided upon has been found unsuitable in that it is not waterproof, in consequence of which briquettes have absorbed moisture and crumbled to dust in storage. Further experiments are being made to find an efficient waterproof binder.

Shaw Wallace & Co.—Managing Agents.

WORLD OF INDIAN FINANCE

Friday, Nov. 16.

The ease in money conditions has continued during the week. There is such a plenitude of funds that call money is glued to the level of one percent. There is still no sign of activity in trade such as would make a difference in the conditions of credit. The exchange market is as dull as ever, bills continuing to be as scarce. The prospects of trade recovery are viewed with even less optimism than sometime ago. The recent publication of the League of Nations, the *World Economic Survey*, which is a comprehensive and expert review of conditions in international trade during the last one year, are also not calculated to revive optimism. For the outstanding fact is that in the Autumn of 1934 conditions are by no means comparable to those in the Autumn of 1932 or 1933. There has, indeed, been a consistent deterioration which, there is no reason to believe, has come to an end.

The Treasury Bills policy of the Government does not call for much comment. There is a small fractional fall in the average rate of accepted tenders from Re. 1-7-11 percent to Re. 1-7-10 percent. Sales of intermediates have shrunk to the inconsiderable level of Rs. 13½ lakhs. The amount applied for during the last auctions, however, show very considerable improvement from Rs. 184¼ lakhs in the previous week to nearly Rs. 291½ lakhs during the week under review. The increase in the tenders might be attributed to the heavier maturities during this week. Just as during last week the low sales of intermediates can be attributed to the low maturities, one might also expect heavy sales of Treasury Bills during this week as a result of the large payments which the Treasury will have to make on account of the maturities. It must be remembered that we have come to the period of heavy maturities for which the Government had been preparing from a long time ahead.

The rise in British and Indian Government securities may well be called the feature of world finance during the week. 3½ percent paper has shot up to Rs. 95. Other scrips have moved in sympathy though not to the same extent ; and the outlook on giltedge, on the whole, is extremely buoyant. In spite of the sensational increase there is still expectation of further rise. For such rapid development, the impetus has again come from the giltedge market in London. 3½ percent sterling has increased to £98 ; and this is a reflection of the rise in British Government securities. Though, in view of the timorous attitude of investors towards giltedge securities in the near past, the rise that has occurred during the week may seem strange, it should not be difficult to understand or explain it. The immediate cause of this rise is, however, to be found in the extremely easy conditions of money in the London market. As pointed out in last week's issue, conditions in the London market have been determined largely by the breakdown of the Gentlemen's Agreement amongst clearing banks to keep the bill rates pegged at a particular level. The strain on this agreement is caused by the fall in the volume of bills. The present position is such that nothing could possibly happen to relieve the money market of its surplus of funds. Far from there being a shortage, there is every danger that the volume of surplus funds in the London market would be increased by the inrush of foreign money seeking refuge in the haven of London from the storms of international finance.

Though the chain of results following the breakdown of the Gentlemen's Agreement between the clearing banks may be regarded as the immediate cause of the developments, it must also be remembered that even in the larger view of the position of international finance and economy, the lower trend of interest rates is inevitable. It is sometime now since Mr. J. M. Keynes declared in his speech at the annual meeting of his insurance company that the trend of interest rates must be increasingly downward. At that time the acquiescence in Mr. Keynes' forecast, such as it was, was in deference to his standing. But subsequent developments have proved that Mr. Keynes was speaking not merely as a theorist but as one with a true insight into international finance. As we hinted earlier, the lower trend of international money rates means that the prospect of remunerative investment of capital is viewed with the greatest gloom. At the time Mr. Keynes spoke, the general outlook of international trade was not so bleak as it is to-day. For, the revival which began in the Autumn of 1932 had not quite died out, despite the setback in 1933. But now, though the rate of decline in international trade has slowed down, the prospects of expansion are not bright. It is, we believe,

an appreciation of the larger factors of international trade and finance by leading financiers that has made for the sensational rise of giltedge securities during the week.

So far as India is concerned, it has for a long time followed the London market closely, especially when money conditions are favourable to rise in giltedge. But mention must be made of the rumour that the Government of India are planning to raise their credit basis to 2½ percent and that a New Loan might be issued sometime in February next year. This is probably the counterpart of the rumours that are current in the London market about the intention of the British Government. As the British Government are the principal beneficiaries of the fall in the money rates following the breakup of the clearing banks agreement, they are even believed to have actually brought about the present position. Colour is lent to this suggestion by the fact that during the time of the conversion of the War Loan the Government actually engineered the conditions in which such a conversion would be possible. As for India, it is not quite a dream that the credit of the Government can be raised to a 2½ percent basis. Whatever the truth may be, these rumours have had a large place in sustaining the buoyant feeling in the market. 3½ percent paper is quoted Rs. 94-14-0 at the close of Friday's trading. The other loans have also moved in sympathy. The long view of giltedge has already been indicated. So far as the immediate future is concerned, the only factors to note are that the local market in Calcutta has not yet developed any overbought position, while Bombay is believed to have gone in that direction.

The exchange market is dull and stagnant owing to the sheer poverty of trade. There are very few bills offering and demand for near remittance is scarce. Bills are offered only at very unremunerative rates, but the undertone for near positions is good without any weakness, while forward rates are weak.

The closing rates are: T.T. sellers quote 1s. 6 1/32d. November to mid-March and 1s. 6d. March-July with buyers 1/32d. higher.

Three months bill rates are 1s. 6⅛d. November-February.

Money was in plentiful supply, call money quoting 1 percent. Onemonth deposits quoted 1 percent and twomonth and threemonth deposits 1¼ percent.

BANKING:

It is sometimes said that, in speaking of simple transactions, Bank officials are prone to use terms which, far from being enlightening, are calculated to make confusion worse confounded in the ears of the customer seeking an explanation why he should do this or not do that. Branch Managers of Lloyds Bank are always willing to explain to customers and others the "Why and the wherefore" they should do a thing one way in preference to another.

GILT-EDGE PROSPECTS
THE OUTLOOK IN LONDON

(*By cable*)

As we go to the Press, the following cable has been received from Mr. C. S. Rangaswami:

London, Nov. 16.

For nearly three years *Indian Finance* has been forecasting brighter prospects and higher levels of prices for giltedge securities, though to stick to this view has been by no means easy. The Government themselves have often been inimical to the improvement in their credit which a higher level of giltedge prices betokens. The upsets which they have often caused in the market by their unscientific methods of borrowing had not infrequently placed us in an awkward position and even very nearly shaken our faith in the opinions we held. But our confidence in the face of odds has been vindicated by the developments in the giltedge market both here and in India.

Since my arrival in London I have had daily increasing evidence of a reassuring character tending to confirm what was doubtless a certainty to me, the realisation of our expectations in regard to giltedge. Till a few weeks ago, the City Editors of the London Newspapers were inclined to feel that giltedge prices had reached unduly high levels. This feeling was particularly explicit in the case of India Loans and I have, within the short time I have been here endeavoured to combat this tendency. Now that the giltedge market has developed an almost unpredictable strength, there is no longer any note of hesitancy in the forecasts of future prospects made by the City Editors. They are prepared to assign to the factors making for higher giltedge prices their full strength and significance. The *Times* sees "no real cause for reaction apart from profit-taking motives." And even profit-taking reactions, the *Times* welcomes as tending to prevent the market from developing a technically unhealthy position. *The Investors' Chronicle* is even more exuberant and it believes that the peak of giltedge will be reduced only when the bank rate is reduced to one and a half per cent. and long-term interest rates are flattened out to a level as low as 2½ per cent. This view is fully endorsed by *The Financial News,* which declares that Mr. Keynes and his 2½ per cent.—and probably under—are winning all along the line.

The Manchester Guardian accepts the view that the British Government have actively engendered the present conditions and emphasizes that the Treasury has asserted itself, as vastly more powerful in the markets than had ever been suspected. According to the *Guardian,* institutional investors will in the present conditions simply be choosing the longest term government securities at any price. The *Economist* examines closely the "forces working for strength in the giltedge market." And there is no doubt that since this analysis was last made these forces have gathered and are still gathering fresh and increasing impetus.

I have no hesitation in saying that 3½ per cent. India Sterling paper is clearly headed for par. One might think in this connexion—and my own gossip which will appear elsewhere in this issue will suggest the thought—of the scare which political die-hards might create, with obvious consequences to the prices of India Sterling securities. But neither King Canute nor King Churchill nor the banner headlines of the *Daily News* can stem the swollen tide of giltedge. The developments here are so propitious and must continue propitious in the future, as long as we can foresee, that England will soon be borrowing long-term money at 2½ per cent. and it should be the easiest thing for India to follow at the rate of 3 per cent. The question suggests itself to me—will 3½ per cent. rupee paper which is considered to be irredeemable be replaced by a three per cent. paper? I ask, why not?

Thursday evening.

There have been more eddies and cross currents in the waters of international finance during the week than for some time past. Since the cessation in large part of the seasonal demand for dollars sterling has ceased to have an independant course of its own, and is buffetted by a number of conflicting forces. So long as the value of sterling was governed merely by the scare of Continental currencies and the fall in the commercial demand for dollars, its upward course was not greatly arrested and the last three to four weeks have registered a smooth improvement in the value of sterling. But during the week, in addition to these factors there have also been the anxiety of the American Government to prevent an excessive inflow of gold, the improvement in the political situation in France and an accentuation of the fears in regard to the Belgian currency.

The position in regard to America has been changed mainly by the resistance which China has afforded to the Silver Purchasing Policy of the American Government. America did not at the time of the inception of this policy apprehend that China, of all nations, would put obstacles in her way ; but China has done it and the export duty, which she has imposed on silver has interfered with America's silver purchases. The amounts of silver available in the international markets have been greatly diminished. It is now clear that the American Government would not be able for sometime to bring about the 3 to 1 ratio of gold and silver, which was the avowed objective of the silver policy. And what time silver has become scarce in the international markets, the dollar has also appreciated ; and though it has not reached gold import point, there can be no doubt that gold imports would come in a heavy rush. Already the movement has started. The nervousness which was felt about the franc during the time of the Cabinet crisis and the fears that are now entertained about the future of the Belga have brought about for America an unwanted inflow of gold. The result is that America has two undesirable developments at the same time. The stocks of gold increased and the inflow of silver is less, Thus the American Government have to endeavour to perserve the existing ratio between gold and silver instead of the 3 to 1 recommended in the Silver Legislation of Congress. At present the inflow of silver is just keeping pace with the inflow of gold. But this would hardly suffice. For one of the purposes of the purchase of silver is to keep the dollar low ; and if the present position continues, the growing strength of the dollar would not have been mitigated. The American Government have, therefore, had to interfere with the exchange market and give support to the franc. The support to the franc has naturally taken the form of the purchase of the French currency by the Exchange Equalisation Fund. And the American and the British controls have, indeed, been busy of late. During Air Mail week both the British and the American controls had been busy ; and though the effect was to prevent a depreciation in sterling, there was no co-ordination of effort between the two controls. On that occasion also the aim of the American operations was to prevent a flow of gold from Europe to the United States, but at the same time the British authorities were selling francs in order to prevent a depreciation of sterling. The neutralising effect of these two sets of operations is obvious. With a little co-ordination and understanding between the two controls, the more rational course of British selling of dollars would have been adopted.

This anomalous situation may not have continued since. For it is not to be supposed that the British control would be interfering actively in the market to prevent an appreciation in sterling, though it would have to when sterling rises over a certain level. The British authorities have, indeed, been lucky that the growing nervousness in regard to the Continental currencies has not had their full effect on sterling. For one of the results of the depreciation in the franc and the Belga is the rise in the dollar, which the American authorities must be anxious to prevent. The American Control has, indeed, endeavoured to prevent the appreciation of the dollar ; and their efforts have to take a more direct form, inasmuch as the purchases of silver are no longer there to exert their indirect effect on the exchanges. The action of the American control has tended to impart strength to the gold currencies and the week may, therefore, be described as one of arrested rise in sterling.

It is a question whether the intervention of the American control can offer enduring protection to sterling against an unwanted rise. The action of the American authorities has not done much to mitigate the flow of bad money into London. London is still as much in a flush about bad money as ever before. It is said that bad money are like teeth in the human system. They are a nuisance when they are coming, they are a nuisance when they are there and they are a nuisance when they are going. The real point, therefore, is whether the intrinsic position of the gold currencies and public confidence in their stability would increase in the near future. At present one may set down the definite gain that the French political situation has been settled and that M. Flandin has established his new Government and secured the necessary support and confidence. The change in the personnel of the French Government, it has been made clear, does not mean a change of policy. M. Flandin stands, as well as M. Doumergue, for balanced budget and sound money. He has already accepted the principle annunciated by M. Doumergue —a principle which strangely enough brought about his fall—that it would not be open to private members of the Chamber of Deputies to propose increases in budget expansion. In a country like France where Deputies seek to serve their constitutencies by proposing expenditure of which their electorate would be the direct beneficiaries, this provision would be a safeguard, at once necessary and sufficient, against surprise increases in budget expenditure. The feeling in regard to the franc is, on the whole, better ; though the franc is still supported to some extent by the action of the American control.

But meantime the position in regard to the Belga has deteriorated. The position in regard to the spot Belga is controlled by the authorities and is, therefore not susceptible to changes resulting from the general nervousness ; but the forward

PUBLICATIONS OF THE LEAGUE OF NATIONS

JUST OUT; "STATISTICAL YEAR-BOOK OF THE LEAGUE OF NATIONS" 1933-34

270 pages ... ... in wrappers Rs. 6 14 0
in cloth Rs. 8 8 0

This is the most complete and authoritative international compilation of official statistics regarding the economic, financial and social activities and the population of all the countries of the world.

These statistics including Vital Statistics, Labour Conditions, Production, International Trade and Balances of Payments, Transport, Public Finance, Monetary and Banking Statistics, Prices, Conversion coefficients for weights, measures and currencies, have been brought up to the end of 1933 or the beginning of 1934 and have been reduced, whenever desirable, to a common measure.

The present edition marks an improvement on its predecessor in the abundance of its information on various matters of great topical interest, such as public finance and the distribution of population by age, groups and occupations, etc. Another new feature consists of the tables on the production and use of nitrogen and of index-numbers of employment.

"REVIEW OF WORLD TRADE", 1933

A presentation and analysis of world trade in 1933 — about 60 pages ... ... Price Rs. 1 12 0

This volume compares the trade of the world of continental groups and of individual countries in 1933 and in recent years. It shows the contribution of each country to the total, the changes in the direction of trade and in the relative importance of the groups of commodities of which it is composed. The analysis demonstrates that, while the value of trade diminished again in 1933, the quantum increased, mainly owing to the larger exports of raw materials; exports of manufactured products were, however, also slightly higher than in 1932. Special attention is devoted to the trade in the most important crude materials and foodstuffs. An annex contains revised indices of the prices and quantum of the trade of individual countries.

Complete catalogue sent free on application.
